Cross-ties in main haulage ways are constantly worn by the rails and by the feet of mules. Wooden rollers, drum laggings, etc., have to be replaced when worn by the constant contact of ropes and cables. A preservative treatment is obviously not suitable for timber subjected to this sort of wear.

Insects.

The important part which insects play in the destruction of mine timbers is rarely realized. They are for the most part brought into the mines with the timber. Regular and thorough inspection and the rigid condemnation of insect-infested timber would therefore greatly reduce the loss from this source.

Insects bore into sound wood and greatly weaken it and, moreover, leave holes or galleries which encourage the entrance of wood-destroying fungi. A good preservative treatment will protect the timber from insect attack, as well as prevent decay. If the bark is removed from timber soon after it is cut it will not be attacked by wood-boring insects until the wood becomes old and dry, after which it may be attacked by "powder post" and other borers.

Waste.

In the handling of timber for its many uses in the mines there is some unnecessary waste. Though decay or a fracture is often confined to but one part of a set, the entire set is rendered useless. Therefore if it is possible to preserve the threatened part, the whole prop or set may be saved. Again, in certain situations the sizes of mine timbers may often be materially reduced provided they are kept sound. Under present conditions the timber is often large enough to do its work after decay has progressed to a considerable depth. Instead of offsetting this decay with sizes larger than necessary, smaller treated timbers may be used with economy.

The utilization of waste mining timber has been carefully investigated. Short sections of broken and partially decayed round timber have been split into laggings with some success. Worn-out and broken planks, sills, rollers, etc., have been profitably disposed of to railroad companies as fuel wood for locomotives with the additional benefit of cleaning up around the collieries. Worn-out drum laggings and short ends of sound gangway timber, formerly regarded as useless, have been sawed into short mine plank, car lumber, pulley bearers, and slab plank. Rough slabs from the mills have been split into laggings and the refuse of the mill consumed as fuel.

THE EXPERIMENTS.*Plan of Experiment.*

Sets of round gangway timber averaging 13 inches in diameter were chosen as a basis for the experimental treating work. These sets, which are used for supporting the main haulage ways, consist

of two legs (commonly 9 and 10 feet long) and a collar (from 6 to 7 feet long). They are usually placed in gangways at intervals of 5 feet through miles of passages. Each set represents about 26 cubic feet of timber, and one gangway frequently contains 1,000 sets. Ten gangways to a colliery is not an unusual number, and since the average life of the timber in these gangways is hardly above two years, the consumption of timber in anthracite operations is vast. (Fig. 2.)

It was early realized by the Forest Service that a successful preservative treatment would effect great saving in the use of this gangway timber, and the chief object of the experimental work was to learn to what extent gangway timber would be benefited by peeling, by seasoning or drying out, and by treating with a wood preservative. The comparative value of different kinds of wood for gangway timber was also considered. Pennsylvania pitch pine (*Pinus rigida*) and Southern loblolly pine (*Pinus taeda*) were the principal experimental timbers, since these species furnished the bulk of the round timber used in the mines of the company. Red oak (*Quercus rubra*) and chestnut (*Castanea dentata*) were tested as species suitable for planting in the anthracite region of Pennsylvania.

Peeling the Timber.

Experiments have shown that peeled timber is superior in durability to unpeeled timber. The space between the bark and the wood especially favors the development of wood-destroying fungi

FIG. 2.—View in a Pennsylvania coal mine, showing the great amount of timber that is used.
(Drawn from a photograph.)

and is a breeding place for many forms of insect life. When, after placement in the mines, the bark begins to flake off, the timber has already begun to decay. The cost of peeling timber before it goes into the mine ranges from 20 cents to 50 cents per ton of wood, according to local conditions and the kind of timber.

Seasoning the Timber.

Seasoning or drying gives mining timber greater strength and durability. A stick of wet timber has only about one-half the strength of a similar stick absolutely dry. Though it is not practicable for mining companies to hold their timber until it is absolutely air dry, peeled timber will dry out sufficiently in a few months to gain in both strength and durability. From two to four months is necessary for proper seasoning.

To learn the possible loss in weight in round gangway timber, due to peeling and seasoning, a test was conducted at one of the collieries of the company. Representative sticks of Southern loblolly pine, averaging from 11 to 13 inches in diameter and from 9 to 10 feet in length, were chosen. This timber was weighed immediately before and after peeling to determine the weight of the bark. It was then weighed every two weeks until seasoned, to learn the weight of the water evaporated. The time of the year greatly favored rapid seasoning. The short lengths into which the timber

FIG. 2.—Diagram showing percentage of loss of green weight by seasoning

was sawed gave a large drying surface in proportion to volume, and longer sticks would season more slowly. (Fig. 3.) Table 1 gives a synopsis of this test.

50	30.3		

If a mining company handles its own timber from the woods to the mines the saving in freight made possible by peeling and seasoning can readily be estimated. Labor is the principal factor in the cost of peeling, while the cost of seasoning must be represented by the loss of interest on the capital invested in the timber during the seasoning period. However, these additional items of expense are more than offset by a maximum reduction in freight of from 30 to 40 per cent and by the far better condition of the timber with regard to both its life at the mines and the readiness with which it will take preservative treatment. The peeling of timber at the mines has been unsatisfactory and expensive, because of the limited amount of yard room and the accumulation of bark. The following considerations favor peeling in the woods: (1) The saving in the cost of freight due to peeling and seasoning; (2) the saving of yard room at the mines; and (3) the prevention of fungous disease and insect attack by early peeling.

Treating the Timber.

Peeling and seasoning mine timber unquestionably increase its durability. However, in order to prolong its life to the fullest extent, a preservative treatment is necessary. (Fig. 4.)

Impregnated wood resists decay because the preservative is antiseptic and excludes the moisture necessary for fungous growth. Timber used in the mines was treated with a variety of preservatives under several methods of application. Both green and sea-

soned timbers were treated to determine both the relative value of the treatments and the best method of handling preparatory to treatment. If treated at all, the timber must be peeled. Table 2 shows: (1) The method of treatment; (2) the preservative ap-

Brush Treatments.

Brush treatments with both creosote and carbolineum were applied in two coats to the Pennsylvania and Southern pines. A large flat brush and a kettle of the hot preservative are all that is required for this treatment. A very small amount of the preserving fluid suffices, but the cost of application in proportion to the results obtained is considerable. For small individual operators who can not afford the cost of a large plant, brush treatments are feasible and economical.

The disadvantages of brush treatments are :

- (1) The difficulty of completely covering the timber and filling all checks and cracks.
- (2) The very slight penetration secured. The subsequent checking or opening of the timber may often allow disease to pass through the shallow exterior band into the untreated interior wood.

Open-tank Treatments.

Pitch pine and loblolly pine have been most successfully treated with both creosote (dead oil of coal tar) and a 6 per cent solution of zinc chlorid by the open-tank process.

Description of Tank.

The experimental open tank was, for the most part, constructed from old material already in the possession of the company. A section of an old boiler 34 inches in diameter and 13 feet in length was set vertically in the ground to a depth of 5 feet. This tank had a double bottom, separated by a space of 1 foot. Between the two bottoms a coil of 1-inch pipe 20 feet in length carrying a steam pressure of 110 pounds per square inch furnished the heating surface necessary to give the preservative fluid a maximum temperature of 240° F. This coil was connected by a 1-inch pipe to a 10-inch steam main 75 feet distant. The timbers, which were placed vertically in the tank, were immersed by attaching a circular weight to their lower ends. The timbers were lowered into and hoisted from the tank by means of a small hand derrick with a swinging arm.

Description of the Treatment.

The open-tank treatment as given in this experiment was briefly as follows: Green, partially seasoned, and thoroughly seasoned timber was lowered into the tank and immersed in creosote, or in a zinc chlorid or salt solution, at a temperature of from 90° to 120° F. The temperature of the creosote was raised by the coils to from 212° to 220° F., and that of the zinc chlorid or the salt solution to about 212° F. In no case, however, was the temperature allowed to go above 240° F. for fear of injuring the fiber of the timber and so decreasing its strength. When this hot bath was over the steam was turned off, and the timber was allowed to stand until the liquid cooled to a temperature of from 170° to 100° F. The periods of heat and of cooling were varied for each kind of timber and for each stage of its seasoning. The time required for the cooling operation, which depended largely upon the temperature of

Fig. 5.—Diagram of an experimental tank used for treating mine timbers.

the atmosphere, was usually from three to twelve hours. For the whole treatment the time varied from six to twenty hours.

Theory of the Open-Tank Process.

The theory of the open-tank process may be given in a few words. The heat of the preservative expands and expels a portion of the air and water contained in the cellular and intercellular spaces of the wood tissue, and as the preservative cools there is a contraction and condensation of the air and water which remain. To destroy the partial vacuum thus formed, the liquid is forced by atmospheric pressure into the cellular and intercellular spaces, a process aided, of course, by capillary attraction. In point of fact, therefore, the hot bath merely prepares the wood for absorbing the preservative, and the actual impregnation follows as the preservative cools.

The ease and effectiveness with which timber can be treated by this process depend upon the kind of wood and its degree of dryness. In one species the structure of the wood tissues may effectually resist and in another may greatly favor the expulsion of air and water during the hot bath; in seasoned timber air, and in green timber water, is the chief element to be removed before the wood can be impregnated, and since air may be expelled much

more easily than water, seasoned timber is the more successfully treated.

Possibilities and Regulations of the Treatment.

Loblolly and pitch pine, among the more important mining timbers of the anthracite region, have been treated by the open-tank process with particular success. By simply immersing the timber first in hot and then in cold preservative fluids a penetration of from 1 inch in green timber to from 4 to 5 inches in seasoned timber has easily been secured. Aqueous solutions of zinc chlorid and common salt have been absorbed with as much ease as creosote.

In timbers which have a considerable proportion of heartwood the line of demarcation separating heartwood and sapwood is frequently also the line separating the treated and the untreated wood. In past experiments with the open-tank process the heartwood has not been penetrated to a great depth, though this may be accomplished hereafter. The sapwood of chestnut and red oak has been treated with a fair degree of success, but with extremely little penetration of the heartwood.

With absolutely green timber it has been a question of obtaining the greatest possible impregnation in the entire period of treatment (twenty hours). For green timber the period of heat or preparation for treatment has been increased from its usual length (seven hours) to eighteen hours, and this timber has been given two separate entire treatments on successive days without any improvement over the standard treatment of twenty hours.

The treatment of loblolly and pitch pine is regulated by the proportion of heartwood and sapwood contained and the degree of

FIG. 6.—Comparative penetration in seasoned and green loblolly pine. Both sticks were given the same treatment. The seasoned piece has practically full penetration. (Drawn from a photograph.)

seasoning reached. With a stick of pine absorption is more easily controlled by varying the duration of the cold bath than by varying that of the hot bath. The duration of the hot bath necessary to prepare any form or kind of timber for impregnation is exceedingly variable. Seasoned timber, however, absorbs the cooling preservative with a fair degree of regularity down to a temperature of 120° F. (Fig. 6.)

Table 3 gives average and representative treatments of loblolly and pitch pine by the open-tank process:

Summary of the Open-tank Treatment.

(a) Loblolly and pitch pine can be successfully and economically treated by simple immersion in successive hot and cold baths in an open tank, at a cost of about 11 cents per cubic foot.

(b) Green timber is treated with far more difficulty than seasoned timber.

(c) The difference in weight of green timber before and after treatment is by no means indicative of the amount of the preservative absorbed. The simple application of the hot liquid to green timber slightly reduces its weight and yields no penetration. The same application to seasoned timber slightly increases its weight and gives a slight penetration. Green timber after treatment may show a penetration of 1 inch without an increase in weight.

(d) Heartwood of both loblolly pine and pitch pine is penetrated with far more difficulty than is the sapwood of the same species. This is especially the case with pitch pine, which clearly shows after treatment a distinct division between the treated sapwood and the untreated heartwood.

(e) Experiments indicate that for pine timbers of the same degree of dryness or containing equal proportions of heartwood and sapwood impregnation can be regulated by increasing or decreasing the duration of the cooling bath.

Cylinder Treatment.

Loblolly pine gangway timber was treated for experimental purposes in a closed cylinder under pressure. One portion of this timber was treated with 12 pounds of creosote per cubic foot, and the remainder with a 5 or 6 per cent. solution of zinc chlorid.

Method of Treatment.

The timber to be treated was loaded on trucks and drawn into a 6-foot steel cylinder by means of a wire cable. The doors of the cylinder were closed, and steam was turned in at the required pressure for from four to six hours. When the steam had been allowed to escape and the condensed water in the cylinder to run off, a vacuum of 22 inches was applied. During this process steam was passed through the heating coils within the cylinder. The preservative fluid was then run into the cylinder and pressure was applied until the desired absorption was attained.

Comparative Cost of Open-Tank and Cylinder Treatments.

The method of treatment in a closed cylinder under pressure is effective but expensive. Here, as in the previous treatments, the cost of the preservative is a large item, but the cost of application is far greater by the cylinder process than by the others. The saving secured by the open-tank method is due to—

(1) The omission of the steam, vacuum, and pressure features of the cylinder process and the elimination of the expensive machinery necessary for those stages of the treatment.

(2) The light construction of the tank, allowed by the lack of strain on the walls.

(3) The small amount of labor required in the operation of an open-tank plant, due to the simplicity of its construction and method of applying the preservative.

(4) The fact that the cost of construction and maintenance of an open-tank plant is less than one-fifth that of a cylinder plant of equal capacity.

COMPARISON OF EXPERIMENTAL SETS OF GANGWAY TIMBER.

During the past year (1906-7) gangway timber of various species, peeled and unpeeled, green and seasoned, and treated and untreated, has been placed in gangways in the collieries of the company. (Fig 7.) Each and every kind and condition of gangway timber has been compared with the timber in most general use in the southern anthracite region, namely, green, unpeeled loblolly and pitch pines. The object of this comparison is to prove exactly to what extent the experimental timber is superior to that at present used. In the course of the experimental work the following comparisons have been made:

Species compared.	Treatments compared.
Loblolly pine (<i>Pinus taeda</i>)	Brush.. {Creosote.
Pitch pine (<i>Pinus rigida</i>).	{Carbolineum.
Longleaf pine (<i>Pinus palustris</i>).	Open-tank.. {Creosote.
Chestnut (<i>Castanea dentata</i>).	{Solution of zinc chlorid.
Red oak (<i>Quercus rubra</i>).	{Solution of sodium chlorid and magnesium chlorid.
	Cylinder.. {Creosote.
	{Solution of zinc chlorid.

KEEPING RECORDS.

The history of each set of gangway timber and each part of each set has been recorded in writing and on maps. These records include: (1) The date of setting; (2) the colliery; (3) the gangway; (4) the position in the gangway relative to the nearest chute and adjacent set of timber.

FIG. 7.—Partially seasoned loblolly pine gangway timbers after ten months' service. Treated with creosote by the open-tank process. (Drawn from a photograph.)

Table 4 gives a summary of the experimental sets of timber placed in the mines of the Philadelphia and Reading Coal and Iron Company in 1906.

RESULTS DERIVED FROM EXPERIMENTS.

Though results so far derived from actual experiments do not cover all classes of mine timber under all conditions, they show that it will unquestionably pay mining companies to peel their round timber, to season it for a few months, and to treat it thoroughly with some good preservative. For pitch pine and loblolly pine, the open-tank process with creosote has proved an efficient and economical method of treatment. The preservative value of zinc chlorid for mining purposes is yet to be determined. Gang-

way timbers treated with creosote by the cylinder process are standing well. Because of its cost, however, this form of treatment should not be considered unless, in comparison with the far less expensive open-tank method, it gives universally better results. Timbers treated by the brush method with creosote and carbolineum have so far effectively resisted decay. Because of the very simple method of application, brush treatment may prove advantageous for small consumers, or where the timber is in great danger of being broken by excessive crushes.

As a direct result of these cooperative experiments, the company is considering the advisability of treating their mine timber on a more extensive scale. Plans have been drawn up for the construction and erection of a commercial open-tank wood-preserving plant at one of its collieries. This plant will have a daily capacity of about thirty sets of gangway timber (800 cubic feet), and will be large enough to treat all timber at this colliery except that which is broken or worn out. Creosote or a solution of zinc chlorid, or both, will be the preservative fluids used, although the plant is designed for the use of any preservative which may prove efficient.

A TIMBER POLICY FOR THE SUCCESSFUL PRESERVATIVE TREATMENT OF MINE TIMBER.

If a mining company has proved by actual experiment that timber preservation is practical and economical, it should be in a position to carry it out. To do this timber can not be rushed directly from the woods to the mines; there must be time for preparing it for treatment and for treating it. This means the storage of a reserve supply of felled timber at one or more points.

To insure a regular supply of timber for their present and future needs mining companies should purchase and operate tracts of timber land. For such an investment to be permanent, the logging must be carefully and economically done, and the forest protected from fire and managed on sound principles. The timber should be peeled immediately upon being felled in the woods, and allowed to season while waiting on cars for shipment. In this way freight charges on bark and a portion of the water present in green wood will be saved and the timber will be rendered more resistant to decay. In many cases the time consumed before and during transportation may be enough to season the timber sufficiently to prepare it for preservative treatment on its arrival at the mines.

A careful and thorough inspection of all timber is strongly recommended. It would be poor economy to apply expensive pre-

servative treatments to defective material. Timber cut from land owned by the mining company should be inspected in the woods or at the point of shipment to avoid unnecessary freight charges. Timber shipped to the mines by outside parties should be just as carefully inspected. At present timber is sometimes accepted in such condition that it is doubtful whether its service in the mines would pay for the cost of setting it, exclusive of the cost of the timber. No matter how critical the timber situation may be, it is believed that the policy of accepting everything is a poor one.

More supervision in the setting of mine timber is suggested. A contract system of timbering without proper supervision means setting the greatest amount of timber in the shortest possible time, regardless of where and how the timber is placed. If timber is so placed that it can not properly resist the strains to which it is subjected, and its strength is not utilized, it represents a partial or total loss. If it will pay to treat timber with preservatives in order to resist decay, it will surely pay to handle it right to resist the allied factors of destruction.

It should be borne in mind that the results derived from these experiments are especially applicable to the Pennsylvania and Southern pines used in the anthracite mines of the Schuylkill region. For other forms of mining and in other regions it will be necessary to conduct other experiments to meet local requirements.

Results obtained by actual experiment clearly prove that it will pay mining companies to peel their timber, to season it for several months, and to treat it with a good wood preservative. Loblolly and pitch pine have been most successfully preserved by a treatment with creosote in an open tank. This method of treatment is simple and economical. As a direct result of the experimental work the company is considering the advisability of taking up wood-preserving work on a more extensive basis, and has drawn up plans for the erection of an open-tank wood-preserving plant at one of its collieries.

In order to apply a preservative treatment successfully, a mining company must be able to regulate its timber supply. To regulate this timber supply and to make adequate provisions for the future, it is advisable that mining companies own and operate tracts of timberland. By peeling and seasoning timber where it is cut a reduction in freight charges of 30 to 40 per cent. is possible.

The necessary waste timber about the mines can be utilized and the unnecessary waste largely prevented.

A strict and efficient system of inspection for all timber and

FIG. 8.—Diagram of a small commercial plant for treating mine timbers, cross-ties, cross-arms, etc.

more care in setting mine timber would result in a considerable economy.

The results obtained from these experiments are more especially applicable to the southern anthracite region of Pennsylvania.

Production of Slack Cooperage Stock in 1906

GIFFORD PINCHOT, Forester.

This report gives statistics of the production of slack cooperage stock by 712 mills in 1906. The data were gathered entirely through correspondence, and the results are not altogether satisfactory, as beyond question the actual production of the year was greater than that reported. The incompleteness of the figures is due chiefly to the failure of many manufacturers to reply to any of the several requests for information which were sent to them, and, in small degree, to the imperfect list of manufacturers available. Since statistics on this industry have never before been compiled in a comprehensive manner, it is impossible to draw conclusions as to the relative completeness of the returns. It is sincerely hoped that in the future, as the purpose of the annual investigations is better understood, the manufacturers will respond more promptly to the requests sent them, and that complete figures may be obtained.

WOODS CHIEFLY USED FOR SLACK COOPERAGE.

Table 1 summarizes the production of staves, heading, and hoops and shows the total number manufactured from each species with the average value per 1,000. The total reported production was 1,097,063,000 staves, valued at \$6,081,880, or a little more than \$5.50 per 1,000; 129,555,000 sets of heading, valued at \$5,622,168, an average value of approximately 4 cents per set; 330,892,000 hoops, valued at \$2,486,517, or \$7.50 per 1,000. Staves were manufactured in considerable quantities from 14 different kinds of wood. The most important of these was elm, which furnished more than one-fifth of the total number, with pine and red gum ranking next. These three kinds furnished practically one-half of the total number. Of the different kinds of staves, ash shows the highest average value—\$7.40 per 1,000. This is because the majority of the ash staves are used for butter tubs and other packages that require wood which is sound and durable and at the same time is absolutely free from odor or taste that can be imparted to the contents.

Elm, a wood which has long stood pre-eminent in the manufacture of slack barrels, and which only recently has been approached

by other woods, brought nearly \$7 per 1,000 staves. Red oak, which makes an excellent stave, brought \$6.29 per 1,000. Red gum ranked next at \$5.33 per 1,000, while maple, beech, and birch, as might be expected, ranked very close in value, at about \$5 per 1,000. Other woods, as a rule, had a lower average value.

All other	5,324	36,555	6.87	8,821	357,120	40.49	6,613	27,504	4.16
Total	1,097,063	6,081,880	5.54	129,555	5,662,168	43.70	330,892	2,486,517	7.51

The figures indicate that pine is the wood chiefly employed in the manufacture of heading, followed by elm, red gum, basswood, and beech. These six different kinds of wood furnish nearly two-thirds of all the heading manufactured. Elm is the wood chiefly used for the manufacture of hoops, although a considerable quantity of ash, oak, and birch is used. The large variety of woods used for slack cooperage is in striking contrast with the tight cooperage industry, in which one wood—white oak—furnishes nearly the whole amount.

SLACK BARREL STAVES.

Table 2 shows the production of staves in the different States, by kinds of wood. About two-thirds of the slack barrel staves manufactured are produced in the following States, named in the order of their importance from a standpoint of quantity: Pennsylvania, Virginia, Michigan, Missouri, Ohio, Illinois, and Arkansas. Rated in the order of the value of the staves, however, Michigan ranks first, followed by Pennsylvania, Virginia, Missouri, Ohio,

Illinois, and Arkansas. In the production of elm staves Michigan leads, followed by Ohio, Missouri, and Illinois. These four States produce the bulk of this stock. Maple staves are produced chiefly in Pennsylvania, Michigan, and Minnesota, and beech staves in Pennsylvania and Michigan. More than one-half of the total number of pine staves is produced in Virginia. This gives Virginia her rank of second place in order of importance for number of staves, and third for value. Missouri leads in the manufacture of gum staves, followed by Georgia and Arkansas. The oak staves, practically all of which are some form of red oak, are manufactured chiefly in Indiana, Ohio, and Tennessee, although a large number are manufactured in Virginia. Chestnut staves are manufactured almost entirely in Pennsylvania, which produced over four-fifths of the 69,000,000 manufactured. Birch also is manufactured chiefly in Pennsylvania, and more than one-half of the total number come from that State. Ash, the wood which commands the highest average price when manufactured into staves, has its largest production in Missouri and Arkansas. Maine ranks first in spruce

staves, and furnishes more than one-half of them. The quantity manufactured from the other species in that State is comparatively unimportant. Cottonwood, hemlock, sycamore, and basswood are not confined particularly to any one State or group of States. At present slack stave production centers more in the Northern and Eastern States than in the Southern States; this is not the case with tight barrel staves.

SLACK BARREL HEADING.

Table 3 shows that the production of heading reported was 129,555,000 sets. No one State ranks far ahead of the others in the production of heading, but one-sixth of it is produced in Virginia. Michigan ranks second, Illinois third, Maryland fourth, and Missouri fifth. These are the most important States, although North Carolina, Ohio, and Pennsylvania also produce considerable quantities. Pine, which ranks first as the heading wood, is produced chiefly in Virginia, which State produced over 21 million sets. Illinois and Ohio furnish most of the elm heading. Nearly one-half of the beech heading comes from Pennsylvania, and the greater part of the remainder is furnished by Michigan and Illinois. Red gum heading has of recent years come into favor. The wood makes good slack barrel heading because it is soft and easily worked. It rivals basswood and cottonwood for this purpose. The greater part of

the red gum production comes from four States—Missouri, Maryland, Arkansas, and Illinois.

SLACK BARREL HOOPS.

Table 4 shows the reported production of slack barrel hoops in 1906. The total number was 330,892,000, valued at \$2,486,517. Elm is practically the only wood used for hoops in this country, although a few hoops of other woods are now being cut. The production from only five kinds of wood is shown in the table—elm, oak, hickory, birch, and ash. The "All other" item enumerates 6,188,000 hoops, but the quantity of each separate kind did not amount to as much as that given for hickory. The production of hickory hoops reported is doubtless much below the actual quantity, because, as the majority of hickory hoops are manufactured by hand in the woods and do not come under the classification of factory manufacture, it is impossible to secure complete statistics.

TABLE 4.—*Production of slack barrel hoops, 1906.*

The highest average price for hoops was obtained in the State of Illinois, \$9.72 per 1,000. Approximately five-sixths of the hoops reported were produced in six States in the following order: Ohio, Michigan, Indiana, Missouri, Tennessee, and Arkansas. Elm is especially adapted to the manufacture of hoops on account of its great toughness and flexibility, and for this reason it is doubtful whether it will ever be superseded by any other wood. Hickory would possibly be as acceptable if it grew in sufficient quantities and could be manufactured cheaply enough to compete with elm.

Approved:

JAMES WILSON, Secretary.

WASHINGTON, D. C., October 11, 1907.

Experiments With Railway Cross-ties

By HOWARD F. WIESS.

GIFFORD PINCHOT, Forester.

INTRODUCTION.

Cheap stumpage is becoming so scarce in the United States that the railways are finding it more and more difficult to secure their tie supplies.

The various conditions which influence the supply of ties, together with the differences in the durability of similar timber laid in different localities, make it impossible to offer a solution of the tie problem which will apply to the entire country.

Previous investigations by the Forest Service have determined that seasoned timber not only lasts longer than green wood when in contact with the soil, but also that it is more receptive of preservative solutions. The rate of seasoning and ability to absorb preservatives varies with different species, and, moreover, the specific gravity of green wood varies with the season of cutting, being greater in winter and spring than in summer.^a These facts, too, are only of general application. In order to determine the rate of seasoning of different timbers it is necessary to have a definite knowledge of the green weight of each species, and corresponding weights after different periods of seasoning. The length of time which timbers should be seasoned to secure the best absorption of preservative and greatest durability will depend upon the corresponding decrease in the cost of maintenance.

Scope and Purpose of the Study.

The Forest Service entered into a cooperative agreement with the Northern Pacific Railroad to investigate the tie timber accessible to its line, in order to determine the best and most economical methods of handling these timbers when manufactured into cross-ties. The timbers used in the experiment were Douglas fir, western hemlock, western tamarack (western larch), and giant arborvitæ.

The investigation consisted of three separate experiments: First, tests to determine the green weight and rate of seasoning

^a Forest Service Circular 136, Seasoning and Preservative Treatment of Arborvitæ Poles.

of timbers cut in different months; second, tests to determine the absorptive power of seasoned timbers cut in different months; third, tests to determine the comparative durability of green, seasoned, and treated timbers when laid under similar conditions and with various tie-plates and rail fastenings, in a test track.

Two stations were established for conducting the seasoning tests—at Tacoma, Wash., and Sandpoint, Idaho. A substation to the Tacoma experiment was placed at Pasco, Wash. Half of the ties cut each month at Tacoma were shipped to Pasco to compare the rate of seasoning in the two places, which differ widely in climate. The average of these stations gives the average rate of seasoning of Douglas fir for all conditions to be encountered in the Northwest.

Two separate test tracks were constructed, one on the west slope of the Cascade Mountains, near Maywood, Wash., and one in western Montana, near Plains.

Conclusions Reached by the Study.

The final conclusions will be obtained from the test tracks, but those from seasoning and treating are as follows:

(1) There is practically no difference in the rate of seasoning of 7 by 2 and 8 by 1 forms of piles.^a The rate of seasoning, as affected by the position of the pile, depends largely upon local conditions.

(2) Hewed ties, which are peeled when cut, season much more rapidly during the first four months than unpeeled ties. At the end of a year's seasoning, however, the weights of both peeled and unpeeled ties are approximately uniform.

(3) The oven-dry weight of Douglas fir is 28.3 pounds per cubic foot. The green weight varied from 41.7 pounds in February to 37 pounds in July. The minimum air-seasoned weight reached was 31.9 pounds per cubic foot.

(4) Two distinct forms of checks occur on Douglas fir—radial and honeycomb. Timbers cut in June, July and August are particularly subject to radial checking. Honeycomb checks both follow the curves of the annual rings and are at right angles to them; they seldom extend more than 2 inches on the radius and form small, roughly rectangular figures when seen in cross section.

Radial checks are by far the most destructive, and the practice of cutting tie and bridge timbers from Douglas fir and western hemlock during June, July, August and September should be dis-

^a For forms of piling ties see Forest Service Circular 132, The Seasoning and Preservative Treatment of Hemlock and Tamarack Cross-Ties.

continued. Furthermore, at all seasons dimension material over 6 by 6 inches should be partially air seasoned before being shipped east of the Cascade Mountains.

(5) Hewed ties peeled directly before treatment absorb more preservative than those peeled when cut, provided they have seasoned for an equal length of time.

FACTORS WHICH DETERMINE THE LIFE OF CROSS-TIES.

Tie failures, in general, are due to decay and mechanical abrasion.

Decay.

The rate at which cross-ties decay depends upon a number of factors, among the most important of which are general climatic conditions, such as the amount of precipitation and of humidity, and the intensity of heat; the drainage of the roadbed, which depends largely upon the ballast, and the protection from mechanical abrasion furnished by tie plates and improved rail fastenings.

The climatic conditions of the territory through which the Northern Pacific passes show great variation in regard to both temperature and rainfall. The total annual rainfall varies from 7 inches in some places to 95 in others, and temperatures from 50° below to 115° above zero, Fahrenheit. Because of these varying conditions many forms of wood-destroying fungi are to be found, and they make the problem of maintenance extremely difficult. The most destructive forms of fungi observed were *Merulius lacrymans* and *Polyporus betulinus*.

Mechanical Abrasion.

Mechanical abrasion may result from two actions of the rail, each independent of the other. These are called rail cutting and rail sawing. Rail fastenings perform two functions; they hold the rail perpendicular to the tie, and prevent lateral spreading. Experience has proved that the present rail fastenings, cut spikes, are fairly satisfactory when used with hardwood ties, but they are by no means adapted for use with softwood ties. In order to protect the softer woods tie plates have been introduced. These plates not only protect the ties, but materially assist the spikes in overcoming the lateral force which tends to spread the rails, and therefore take the place of rail braces.

There are many different designs of tie plates in use, but all can be classified under two general forms—those with downward projections which penetrate the wood fibers, and those with flat

under surfaces. The relative merits of the two forms are here considered only with regard to their effect in prolonging the life of the tie.

SEASONING EXPERIMENTS AT TACOMA AND PASCO.

Character of the Timber.

Douglas fir was used exclusively in the seasoning experiments at Tacoma and Pasco. The ties were sawed from logs ranging from 3 to 6 feet in diameter. The wood showed from 4 to 36 rings per radial inch. The sapwood of Douglas fir seldom exceeds 3 inches. Owing to this fact and the custom of sawing ties from coarse heartwood timber, the seasoning experiments on Douglas fir show a small loss of moisture in per cent of green weight as compared with other species.

Four hundred ties were cut each month of the year from November, 1903, to December, 1904, except that in September, 1904, none were cut. Of these, 200 ties were marked, weighed, and shipped each month to Pasco. A new series was started at Tacoma in December, 1904, and continued until July, 1905, to act as a check on the first series through the rainy season. As a rule, the ties were weighed within three and one-half days from the time the trees were felled; hence the first weight is the approximate green weight.

A 7 by 2 pile was adopted at both Tacoma and Pasco, with 50 ties in each pile. Two piles of each series of 200 ties were faced north and south and two piles east and west.

a Annual average.

A monthly meteorological table (Table 1), prepared by the United States Weather Bureau station at Tacoma, was used to show whether the ties seasoned under normal conditions and to determine what effect climatic changes had upon the amount and rate of seasoning. No such data were obtainable at Pasco.

Green and Seasoned Weights.

The green weight of Douglas fir, based on the data obtained from 4,000 ties seasoned at Tacoma, shows a seasonal variation of 4.7 pounds per cubic foot. The timber weighed 37 pounds per cubic foot in July and 41.7 pounds in February and March. A thousand feet, board measure, of the July timbers weighed 3,082 pounds, of the February and March timbers 3,474 pounds. The yearly average was 3,284 pounds per thousand feet. These results correspond very closely to the rough green weight of 3,300 pounds adopted by the lumber associations in the Northwest.

Table 2 shows the green and seasoned weight per cubic foot and per thousand feet, board measure, of Douglas fir. The seasoned weight is based on eleven months' seasoning. The column on the right gives the time required for the various months' cuts to reach their minimum weight.

^a Compare time required to reach minimum weight with the amount of rainfall during that time in meteorological table.

The oven-dry weight is 28.3 pounds per cubic foot.

Position of the Pile with Regard to Wind Direction.

The seasoning experiments at Tacoma and Pasco showed that there is little difference in the rate of seasoning of timbers stacked in piles which face different directions. The greatest difference for any single month was 2 per cent, while the average difference for a year's cut, based on eleven months' seasoning, was 0.05 per cent at Tacoma and 0.02 at Pasco.

In view of the slight difference between the two forms of piles, the results at both Tacoma and Pasco have been based on a total of 200 ties for each month.

Rate of Seasoning.

The oven-dry^a weight of Douglas fir used as a basis in this experiment was taken from data established by Professor Hunt at Berkeley, Cal. His results show a variation from 22.1 to 36.2 pounds per cubic foot. The average for all grades, 28.3 pounds per cubic foot, was taken as the basis.

The standard dimensions of sawed ties are 7 by 9 inches by 8 feet, and therefore each tie contains 3.5 cubic feet. Several hundred of the experimental ties were carefully measured and found to conform with the specifications; hence, the weight of each tie was divided by 3.5, the number of cubic feet it contained, and all results expressed in weight per cubic foot.

The results given in Tables 3 and 4 furnish a comparison of the maximum and minimum rates of seasoning of Douglas fir under two entirely different climatic conditions. While the weight per cubic foot and moisture content of the green timber seasoned at each station was practically the same, there is a wide difference in the rate of seasoning. On account of the uniform rate of seasoning of certain months' cuts at Pasco, it has been possible to make four groups and thereby simplify the results. The following four groups were therefore made: (1) October, November, December, and January; (2) February, March, April, and May; (3) June and July; (4) August and September.^a It is impossible to group the monthly cuts at Tacoma.

^a The weight determined by drying small pieces of the wood in an oven at 100° C. until a constant weight is obtained. For further discussion of this see Forest Service Circular 115, Second Progress Report on the Strength of Structural Timber.

^a Oven-dry weight is 28.3 pounds per cubic foot.

Three important conclusions may be drawn from seasoning timbers under different climatic conditions: (1) Timbers cut during different months will eventually reach approximately the same weight per cubic foot in regions with a minimum rainfall; but in humid climates the maximum loss in weight corresponds closely to the seasonal variation in the green weight. These results failed to substantiate the theory that the varying physical characteristics of timber cut at different seasons determine the minimum air-seasoned weight. (2) Rainfall is the chief factor in determining the rate of seasoning. (3) The rate of seasoning determines, to a great extent, the resultant behavior of the timber as to checking.

Checking.

In order to determine the effect of the rate of seasoning upon the condition of the timber, frequent photographs were taken of each month's cut. Two kinds of checks were observed—radial and small honeycomb. Honeycomb checks occur on timbers which season slowly during the first few months. Radial checks occur on timbers which season rapidly during the first few months, that is, timbers which are cut during the period from June to September. A study of these two forms of checks indicates that honeycomb checks cause little damage to the tie, while radial checks are very destructive and often make the tie unfit for service. Because of the excessive checking of Douglas fir, many eastern concerns will not use this timber in

FIG.1.—Radial and honeycomb checks.

large dimensions. In view of these seasoning experiments, it is believed that this objection can be eliminated and the market of Douglas fir extended. Cutting should be limited to the months from November to April, inclusive, and the timber seasoned for at least ninety days before being shipped through the arid region east of the Cascade Mountains.

TREATMENT OF TEST TIES (CREOSOTE).

Four hundred and fifty of the ties seasoned at Tacoma were selected for treatment. These were treated by the straight creosote method. After treatment the ties were again seasoned four months before being placed in the track.

In order to determine the absorption by increase in weight the ties were weighed before and after treatment, then ninety days later. The increase in weight during treatment was 8.6 pounds per cubic foot. After ninety days seasoning an average of 2.4 pounds of this increase had been lost, leaving the net increase per cubic foot 6.2 pounds. When the ties were placed in the track they contained an average of about 6 pounds of creosote per cubic foot.

Table 5 gives the average increase in weight per tie for each month's cut.

SEASONING EXPERIMENTS AT SANDPOINT (IDAHO TIMBERS).

The timbers used in the Idaho experiment were Douglas fir, western tamarack, and giant arborvitæ.^a The Douglas fir of Idaho and Montana differs greatly from that of the Pacific slope, as it seldom reaches 3 feet in diameter. From stem analysis it was found

^a Only two months' cuts of giant arborvitæ were received. On account of the unimportance of this timber for cross-ties, the results have been omitted from this report.

that the age of the Douglas fir from which the ties were cut varied from 96 to 151 years and of the tamarack ties from 100 to 205 years. The ties were generally hewed and varied much in size and shape. In consequence of this it was impossible to determine their volume accurately; therefore the seasoning results are expressed in per cent of the first or green weight of the ties.

Meteorological data were not available, but with the exception of October, 1905, when heavy rains occurred just before the weighings, the seasoning took place under normal conditions.

From September, 1904, to April, 1905, a total of 2,350 ties were cut; divided nearly equally between the fir and tamarack. As a rule, 200 ties of each species were cut each month; of this number, 50 ties were peeled and piled to correspond in form and position with a pile of unpeeled ties.

Form of Piles.

Three forms of piles were used—7 by 2, 8 by 1, and solid. The effect of the form of pile upon the rate of seasoning is given in Table 6. As a rule, the 7 by 2 piles showed a greater loss than the 8 by 1 piles, though the average difference was very small. The solid piles seasoned much slower than the open piles during the first few months, but their minimum weight gradually approached that of the open piles, and were about equal after twelve months' seasoning.

Peeling.

The peeling of timbers was found to be the most important factor in determining the rate of seasoning. Since the unpeeled ties, piled in different forms, seasoned at approximately the same rate, the results of each form have been averaged. (Tables 7 and 8.) The results, therefore, give a comparison of the rate of seasoning of peeled and unpeeled ties for both Douglas fir and western tamarack.

They indicate that peeled Douglas fir ties, cut during November, December, and January, will have seasoned sufficiently for treatment by the following May, whereas unpeeled ties of the same months' cuts do not reach as low a moisture content until from three to five months later. The same general conclusions are applicable to western tamarack, except that its rate of seasoning is much slower and, because of its thin bark, the difference between the peeled and unpeeled ties is less marked.

In view of these results the peeling of all ties as soon as cut is highly recommended. Not only is there greater rapidity of seasoning, but the peeled ties are more uniform in shape and so permit a greater number to be shipped per carload. From Tables 7 and 8 it would not seem profitable to air-season the ties completely if they are to be treated. However, if the timbers are to be used untreated the greatest durability will be secured by continuing the seasoning until the most complete air-seasoned condition has been reached.

<i>a</i> Maximum per cent lost. <i>c</i> November 1. <i>e</i> December 15. <i>g</i> April 20. <i>b</i> October 6. <i>d</i> November 18. <i>f</i> January 16.												

Table 9 shows approximately the length of time required to get the timbers of different months' cuts in the best possible condition for treatment.

TABLE 9.—*Probable seasoning period of peeled and unpeeled ties.*

Month cut.	Month when ties will have seasoned sufficiently for treatment.			
	Douglas fir.		Western tamarack.	
	If peeled.	If unpeeled.	If peeled.	If unpeeled.
September	April	June	June	July
October	April	September	June	September
November	May	September	June	September
December	May	September	July	September
January	June	September	August	September
February	July	September	August	September
March	July	September	August	September
April	July	September	August	September

The peeling of ties as soon as cut allows more seasoning during the first few months, when ties are usually shipped and therefore

means a saving in freight. To determine this a number of ties were weighed before and after they were peeled and compared with unpeeled ties. At the end of six months the peeled ties lost 34 pounds more than the unpeeled; of this loss, 15 pounds was the weight of the bark. The average volume of these ties was about 4 cubic feet. The average loss of weight of the peeled ties was 9.5 pounds per cubic foot as compared with a loss of 4.75 pounds per cubic foot of the unpeeled ties.

TREATMENT OF TEST TIES (ZINC CHLORID).

From the different months' cuts seasoned at Sandpoint the following kinds and numbers of ties were treated with zinc chlorid, a 6 per cent solution being used. An estimate by the guage readings showed an injection of 0.786 pound of pure chlorid per cubic foot of timber.

	Douglas fir ties.	Western tamarack ties.
Unpeeled.....	105	115
Peeled.....	80	100

Both species were treated in the same charge, yet as a rule the tamarack ties showed a better impregnation than the Douglas fir, as follows:

	Increase in weight per tie.	
	Douglas fir	Tamarack.
	<i>Pounds.</i>	<i>Pounds.</i>
Peeled when cut.....	36.3	51.02
Peeled directly before treatment.....	40.2	51.00

These figures show not only the comparative rate of absorption of both species treated under the same conditions, but also that the Douglas fir ties peeled directly before treatment were more susceptible to preservatives than those peeled when cut. These results are contrary to general expectations, since the ties peeled when cut had reached a slightly lower moisture content than those peeled directly before treatment.

TEST TRACK AT MAYWOOD, WASH.

Nature of Track.

The ties for this test were placed in the main line of the Northern Pacific Railway, about 6 miles west of Hot Springs, Wash., near the station of Maywood. They were laid in a continuous stretch, extending from 2,410 feet west of milepost 197 (Pasco—Tacoma) to about 1,185 feet west of milepost 198, covering approximately 4,055 feet of track or about three-quarters of a mile. Two curves, one of 2° and the other of 5°, are included in this section. The grade varies from 0.46 to 0.96 per cent, as shown in figure 2. The following material was used:

Green western hemlock ties.....	203
Green Douglas fir ties.....	557
Seasoned Douglas fir ties.....	1,078
Seasoned and creosoted Douglas fir ties.....	442
<hr/>	
Total ties	2,280
Screw spikes	1,500
Flat tie plates.....	3,700

Flat Plates; Screw Spikes and Cut Spikes.

The flat plates, used exclusively in this test, measure 6 3-16 by 8 $\frac{7}{8}$ inches, giving a bearing surface on the tie of 54.9 square inches. Wherever tie plates were used with screw spikes it was necessary to enlarge the holes in the tie plates to a diameter of 15-16 inch. The screw spikes were imported from France, and are similar to those used by the French Eastern Railway. The spikes have the following dimensions: Total length, 6.39 inches; length exclusive of head, 5 inches; diameter, 0.92 inch; diameter of core, 0.66 inch. There are 9 spirals with a pitch of thread of 0.49 inch and a height of thread of 0.13 inch. The spikes weigh 1.16 pounds each. The common track spikes used are 5.5 inches long, exclusive of the head, and measure 9-16 by 9-16 inch in cross section.

It is the general practice to double spike all ties on the mountain curves; that is, to insert eight spikes per tie, four at each end. This was adhered to throughout the test wherever common spikes were employed. In the case of screw spikes, four were inserted per tie, on both tangents and curves. An 11-16 auger was used in boring the holes for inserting the screw spikes. The holes were filled with creosote before the spikes were screwed into place.

The roadbed, for the most part, is earth embankment, well drained. Gravel is used exclusively for ballast. The valley, at the point where the track has been placed, is very narrow, with standing

timber on both sides of the right of way, so that the track receives the sun only a few hours of the day.

Scheme of Tests.

Nine general series were made for the comparison of different factors. Each series was subdivided into several lots. The purposes of the various divisions and subdivisions of each series are as follows:

Series 1 consists of different kinds of timber under ordinary track conditions; that is with cut spikes and tie plates. It furnishes a comparison of timbers and forms a basis upon which comparisons of durability can be made, especially with those series where screw spikes are employed. Series 2, 3, 4, and 7 cover all conditions under which screw spikes might be used. In 3 and 7, screw spikes were used on every tie; that is, four spikes per tie. In series 3, lot 11, no tie plates were used; this was to test the value of screw spikes in preventing rail cutting without the use of tie plates. Series 2 and 5 include a combination of screw and cut spikes; series 2 has screw spikes at rail joints only, and cut spikes on the intermediate ties; series 5 has screw spikes on alternate ties and on both ties at rail joints. The object of these two series was to give a transition from an ideal track with screw spikes and tie plates on every tie to the present standard track conditions where cut spikes and tie plates are employed.

Since the great cost of equipping a large system with screw spikes might prevent such a step for many years, it was thought possible that this expense might be lessened by using a combination of screw and cut spikes, which would increase the durability of the timber at a minimum expense. Moreover, since the holding power of a screw spike is from two to four times that of an ordinary spike,^a this combination might prevent rail creeping and so prolong the life of timbers on mountain grades.

Series 4, 6, and 8 are a duplication of series 1, with a further comparison as to the value of tie plates. The object in separating these lots was to cover the varying conditions of location, such as are encountered in a cut or on a fill and on tangents or curves.

Series 9 was included to compare the durability of seasoned timbers cut during different seasons of the year. All ties were laid under the same conditions, namely, with cut spikes and tie plates.

Copper burrs were used for marking the ties. The burrs were placed in the face of the tie, 6 inches from the inside of the left rail in the direction from Maywood to Tacoma, and are numbered consecutively from east to west.

TEST TRACK NEAR PLAINS, MONT.

Nature of Track.

The ties for this test were placed on the main line of the Northern Pacific Railway, beginning about 2 miles west of Plains, Mont. The ties were all laid on a tangent in a continuous stretch, extending from 3,461 feet west of milepost 203 (Helena—Hope) to 3,203 feet west of milepost 204, covering approximately 4,800 feet of track, exclusive of space omitted for crossings, switches, and bridges. There is a uniform grade of 0.0167 per cent over the entire test track, as shown by figure 3.

Flat, Flanged, and Wooden Plates—Screw Spikes.

The material used for this test was as follows:

Ties:

Tamarack—Green, 570; seasoned, 571; treated, 197.

Douglas fir—Green, 551; seasoned, 568; treated, 193.

Total, 2,650.

Tie plates:

Flanged plates 794

Flat plates with ordinary spikes 1,726

Flat plates with screw spikes 1,984

Combination (flat and flanged)..... 360

Wooden plates 436

Total 5,300

The wooden plates were made of white oak, treated with one-twelfth of a pound of creosote each. The plates had the following dimensions: Length, 7 inches; thickness, $\frac{1}{4}$ inch; and width a little greater than the base of the rail.

The ties were generally spaced 22 inches from center to center, which allowed 18 ties per rail length of 33 feet. In a few cases it was necessary to insert extra ties when the ties averaged less than 7 inches in width; also in filling in part of a rail length near the crossing, bridge, and switch. More than half of the roadbed is filled, which fact, together with the quality of the gravel, gives excellent drainage.

The test was arranged primarily to determine the durability of green, seasoned, and treated timbers which were cut at different seasons of the year. At the same time it will be possible to compare the effect of three forms of tie plates in reducing mechanical abrasion. In view of the diversified opinions as to the merits of each plate, this phase of the test will be carefully observed from year to year.

The screw spikes, 5,276 in number, and flat plates used in this test are similar to those used in the Maywood track, and were placed in the track as in the former instance.

Scheme of Tests.

The 2,650 ties used in the test track were divided into eight series, varying from four to six logs in each series.

The object of dividing the ties in this test into series and lots, as represented in the following plan, was to compare the different materials under varying conditions. Series 1 is an independent test to determine the possibility of the adoption of wooden plates in conjunction with screw spikes. Series 2, 3, and 8 were of similar timbers under corresponding conditions, the only difference being in the form of the tie plates. Series 4, 5, 6, and 7 contain similar ties and represent the varying arrangements under which screw spikes may be employed. Thus the number of screw spikes per rail length increases as the series progresses, reaches a maximum in series 6, and then diminishes in series 7.

Plan of test track, Northern Pacific Railway near Plains, Mont.

SERIES 1.—TOTAL, 250 TIES. *a*

Flange plates and common spikes at rail joints; wooden plates and screw spikes (6 to the tie) on intermediate ties; 72-pound rail, joints opposite; total length 16 rails, 466 feet, contains 3 short rails (one 24, two 26 feet), regular length 30 feet.

Lot No.	Number of ties.	Kind of timber.	Tie Nos.
1.....	95	Green Douglas fir ties.....	1 to 95
2.....	32	Seasoned Douglas fir ties.....	96 to 127
3.....	27	Seasoned tamarack ties.....	128 to 154
4.....	96	Green tamarack ties.....	155 to 250

Plan of test track, Northern Pacific Railway near Plains, Mont.—Continued.

SERIES 2.—TOTAL, 365 TIES.

Flanged plates and common spikes; beginning with this series all track is laid with new 85-pound rail; joints alternate or "broken;" length of rail 33 feet; total length 20 rails, or 660 feet.

Lot No.	Number of ties.	Kind of timber.	Tie Nos.
1.....	94	Green Douglas fir ties.....	251 to 344
2.....	90	Seasoned Douglas fir ties.....	345 to 434
3.....	90	Seasoned tamarack ties.....	435 to 524
4.....	91	Green tamarack ties.....	525 to 615

SERIES 3.—TOTAL, 361 TIES.

Flat plates and common spikes; total length 20 rails, or 660 feet; extends to within 33 feet of mile post 204.

Lot No.	Number of ties.	Kind of timber.	Tie Nos.
1.....	91	Green Douglas fir ties.....	616 to 706
2.....	90	Seasoned Douglas fir ties.....	707 to 796
3.....	90	Seasoned tamarack ties.....	797 to 886
4.....	90	Green tamarack ties.....	887 to 976

a These ties average somewhat smaller than those in the other series.

SERIES 4.—TOTAL, 363 TIES.

Flat plates; screw spikes at joints, centers, and quarters, common spikes in other ties; 120 ties with screw spikes; 243 ties with common spikes.

Lot No.	Number of ties.	Kind of timber.	Tie Nos.
1.....	92	Green Douglas fir ties.....	977 to 1,068
2.....	90	Seasoned Douglas fir ties.....	1,069 to 1,158
3.....	90	Seasoned tamarack ties.....	1,159 to 1,248
4.....	91	Green tamarack ties.....	1,249 to 1,339

SERIES 5.—TOTAL, 379 TIES.

Screw spikes at joints and on alternate intermediate ties; flat plates; total length 23 rails, 759 feet east of crossing $4\frac{1}{2}$ rails; crossing and two cattle guards $2\frac{1}{4}$ rails (nearly) omitted from test; 208 ties with screw spikes; 171 with common spikes.

Lot No.	Number of ties.	Kind of timber.	Tie Nos.
1.....	108	Green Douglas fir ties.....	1,340 to 1,447
2.....	90	Seasoned Douglas fir ties.....	1,448 to 1,537
3.....	90	Seasoned tamarack ties.....	1,538 to 1,627
4.....	91	Green tamarack ties.....	1,628 to 1,718

Plan of test track, Northern Pacific Railway near Plains, Mont.—Continued.

SERIES 6.—TOTAL, 553 TIES.

Flat plates, screw spikes in all ties; east of switch 19½ rails, 1 tie; omitted for switch 2½ rails, 2 ties; between bridge and switch 9½ rails; bridge 1 rail (nearly) west of bridge 1½ rails; total length 34 rails, 1,122 feet.

Lot No.	Number of ties.	Kind of timber.	Tie Nos.
.....	90	Green Douglas fir ties.....	1,719 to 1,808
.....	90	Seasoned Douglas fir ties.....	1,809 to 1,898
.....	90	Treated Douglas fir ties.....	1,899 to 1,988
.....	101	Treated tamarack ties.....	1,989 to 2,089
.....	90	Seasoned tamarack ties.....	2,090 to 2,179
.....	92	Green tamarack ties.....	2-180 to 2,271

SERIES 7.—TOTAL, 199 TIES.

Flat plates. Screw spikes at joints and on alternate intermediate ties. (Same as series 5) 111 ties with screw spikes; 88 ties with common spikes. Total length 11 rails and 1 tie, 365 feet.

Lot No.	Number of ties.	Kind of timber.	Tie Nos.
.....	107	Treated Douglas fir ties.....	2,272 to 2,378
.....	92	Treated tamarack ties.....	2,379 to 2,470

SERIES 8.—TOTAL, 180 TIES.

Combination of flat and flanged plates. Common spikes. Total length 10 rails, 330 feet.

Lot No.	Number of ties.	Kind of timber.	Tie Nos.
.....	89	Seasoned Douglas fir ties.....	2,471 to 2,559
.....	91	Seasoned tamarack ties.....	2,560 to 2,650

NOTE.—Ties marked consecutively from east to west with copper burrs placed 6 inches from rail base inside of left-hand rail going west.

Approved:

JAMES WILSON, Secretary.

CAPITOL BUILDING, INDIANA TERRITORY, VINCENNES. ERECTED ABOUT 1806.

This building is still standing and is now being used as a residence. It is in a fair state of preservation.

CUSTODIAN'S REPORT

OFFICE OF CUSTODIAN, STATE HOUSE,
Indianapolis, Ind., October 1, 1908.

To the Honorable J. Frank Hanly, Governor:

Sir—The act of the General Assembly of March 5, 1889, creating the office of Custodian of Public Buildings and Property, requires the Custodian to file a report on the last days of March, June and September of each year, and an annual report on the last day of December of each year, and a report for the two years preceding each session of the General Assembly.

The quarterly and annual reports have been duly submitted; and in further compliance with the law, and in obedience to your letter of instructions, I have the honor to submit herewith, for your examination and the consideration of the General Assembly, the tenth biennial report of this department, comprising an itemized account of the expenditures in detail from the different funds during the period from November 1, 1906, to September 30, 1908, and some recommendations as to the manner in which the service of this department could be made more efficient and economical to the State.

SURVEY OF CAPITOL GROUNDS.

The grounds now occupied by the State House are known as squares 48 and 53, in the city of Indianapolis, and that part of Market and Wabash streets lying between Capitol and Senate avenues (formerly Tennessee and Mississippi streets); also, that part of Huron street, or alley, lying between Ohio and Market streets, in the city of Indianapolis. These parts of streets were declared vacated by an act of Common Council and Board of Aldermen on the 22d and 23d days of April, 1878. Square 53, the site of the old State House, was reserved from sale by the State when the city was laid out. Title to the north half of square 48 was acquired by purchase from W. P. and E. P. Gallup, and by grant from the city of Indianapolis; the south half of the same square had also been reserved from sale by the State. The tract above described, and known as the Capitol grounds, is 930 feet in length and 420 feet in width, and contains an area of about nine (9) acres, in the center of which is located the present State House, 496 feet long and 283 feet wide.

Electricity and gas for February, 1907.....	1,553 81	
<hr/>		\$4,862 13
Overdrawn and returned to the State Treasury.....		362 13

Total disbursements\$4,500 00 \$4,500 00

N. B.—The above disbursement for February account was made March 6, 1907; by the provisions of House Bill No. 403, passed by the General Assembly, and which received executive approval March 9, 1907, the above fund was reduced one-twelfth, thus leaving the fund overdrawn to the amount of \$362.13. On April 11, 1907, the Indianapolis Light & Heat Company returned the above amount (\$362.13) to the State Treasury, which balanced the fund. For the remainder of the fiscal year there is a deficiency in the fund as follows:

Deficiency for February, 1907	\$362 13
Deficiency for March, 1907	1,335 25
Deficiency for April, 1907	768 53
Deficiency for May, 1907	682 85
Deficiency for June, 1907	504 04
Deficiency for July, 1907	439 07
Deficiency for August, 1907	435 74
Deficiency for September, 1907	480 83

Total deficiency for the year.....\$5,008 44

CORRIDOR, SECOND FLOOR.

RECEIPTS.

I hold quietuses from the Auditor of State for the following moneys received from the sale of junk carpets, linoleum, waste paper, etc., and paid into the State Treasury:

No.	Date.	Amount.
No. 12104.	January 28, 1907.....	\$35 02
No. 12314.	May 1, 1907.....	99 54
No. 12656.	August 5, 1907.....	44 47
No. 12908.	September 28, 1907.....	27 90
No. 13130.	November 4, 1907.....	6 50
No. 13323.	December 3, 1907.....	45 50
No. 12549.	December 31, 1907.....	16 32
No. 13707.	January 31, 1908.....	11 62
No. 13800.	February 29, 1908.....	27 13
No. 14110.	May 1, 1908.....	26 24
No. 14270.	June 5, 1908.....	13 18
No. 14558.	August 1, 1908.....	10 18
No. 14840.	September 30, 1908.....	13 24
Total receipts		\$376 84

RECOMMENDATIONS.

Statement of regular and specific appropriations needed for this department for the fiscal years ending September 30, 1910, and September 30, 1911:

<i>Regular.</i>		1910.	1911.
Repairs and supplies.....		\$6,000 00	\$6,000 00
Illuminating and power.....		8,500 00	10,000 00
Water		2,500 00	2,500 00
Flags and decorations.....		150 00	150 00
Custodian's salary		2,000 00	2,000 00
Assistant Custodian's salary.....		1,200 00	1,200 00
Custodian's assistants		17,880 00	17,880 00
Totals		\$38,230 00	\$39,730 00

The following specific appropriations are needed and I would ask that each of them be made available April 1, 1909:

Additional repairs to roof.....	\$500 00
Cement walks and steps.....	750 00
Water deficiency for year 1908.....	100 77
Water deficiency for year 1909 (estimated).....	150 00
Illuminating and power deficiency for 1907 and 1908.....	8,826 43
Total	\$10,327 20

The appropriation of \$1,500 for the construction of a new walk along Washington street, from Senate avenue to Capitol avenue, has been expended in full with the result that the State has a good and lasting improvement.

The dangerous condition and unsightly appearance of the steps to the west entrance of the building has been very effectively corrected with the expenditure of the appropriation of \$500 made for that purpose.

The appropriation of \$1,750 for the paving of the north driveway to the building has been expended, excepting a small balance, much to the convenience of the users of that thoroughfare, and the beauty of the premises.

The appropriation of \$3,390 for repairs to the roof has been expended, excepting a small balance, and although expended under the direction of the architect who made the estimate when the above amount was asked for, the appropriation was insufficient to complete the work. Therefore, I urge that an additional appropriation of \$500 be made for the completion of these much needed repairs. The preservation of this magnificent building depends in a great measure upon diligent care in maintaining the roof in first-class condition. Neglect of the roof will in time mean a greater necessity for repairs to the interior of the building.

I would recommend that the salary of the Custodian remain at \$2,000 per annum.

I would recommend that the salary of the Assistant Custodian remain at \$1,200 per annum.

I would recommend that for the salaries of the Custodian's assistants the sum of \$17,880 be appropriated annually. The additional \$1,800 asked for is to provide for the employment of five charwomen to do dusting, cleaning and housekeeping in the various offices of this building. I am advised that charwomen are employed in all Federal buildings, the Indianapolis Federal building included, and the results from their services are very satisfactory, as women are naturally better adapted for this class of work than are men. There is in my opinion much housekeeping work in this building to be done in order that the various offices may be kept in good condition—work that only women can do properly.

I would recommend that the annual appropriation for repairs and supplies be increased from \$5,000 to \$6,000. The increase in this fund is needed because of the age of the building, and the condition of the furniture is such that there is a growing demand for repairs to same. The business of all the State departments grows steadily, which requires a larger working force, and consequently

MORTON MONUMENT.

a greater necessity for new filing cases, desks, tables, chairs, and other office equipment. The leather upholstery installed in the building several years ago is weakening with age and needs constant repairs. With the increasing necessity for repairs and equipment of all kinds it is natural to expect a much heavier drain upon this fund in the future than in the past.

I would recommend that the appropriation for the Illuminating and Power Fund for the fiscal year ending September 30, 1910, be \$8,500.00, and for the fiscal year ending September 30, 1911, \$10,000.00. The increased appropriation for 1910 and 1911 is asked for to meet an estimated expenditure. Said estimate is based on a comparison of the increased expenditures for the past four years. For instance, the amount of illuminating current used during the fiscal year ending October 31, 1905, amounted to \$5,307.89; and for the fiscal year ending October 31, 1906, \$5,520.90; while for the 11 months ending September 30, 1907, illuminating and power current amounted to \$9,508.44, and for the fiscal year ending September 30, 1908, \$8,817.99.

The increased consumption of electric current and water is sufficient evidence that the time has arrived when the State should build and operate a lighting and water plant of its own. I would recommend that the Legislature take action in this matter by appropriating a sufficient amount of money to build and equip a modern heating, lighting and water plant. The cost of illuminating and power current in the future will amount to \$10,000 or more annually under the present contract, and yet there is an insufficiency of light. The State House grounds should be properly lighted, but in my judgment this should be deferred until such time as the State may provide for its own source of supply. The grounds around the Federal building are lighted, as is also the Union Station, the Terminal Station, and the Soldiers' and Sailors' Monument. It is not to the credit of the State that this magnificent building should be lost in darkness, while footpads and loiterers make the lawn and dark corners of the building their places of attack upon those who, through ignorance of danger, or force of circumstances, must pass through the Capitol grounds.

I would also call your attention to the need of relief from the crowded conditions of the State House. The Legislature has created new boards and commissions, and has also increased the forces in some of the present offices, with the provision in the law in every instance that the Custodian shall provide a room or rooms suitable for the transaction of the business of the new board and commission. This has been going on for years, and yet for the last

four years there has not been an available vacant room in the building. The Railroad Commission requires four rooms, yet they have only one room they can call their own. The Public Library Commission has no permanent quarters, the Building Commissions and the Executive Accountant must of necessity be treated as squatters. The Attorney-General's offices, where absolute seclusion is necessary for writing opinions, etc., is crowded with three persons to a room. The State Library and the State Geological Museum have reached the limit of growth without more room. Throughout the entire building there is a general demand for more room, and some provision should be made to relieve this congestion. When the Legislature convenes thirty rooms are needed for various committees, at least twenty rooms must be assigned, and not a vacant room in the building to meet this imperative demand. The inconvenience to the occupants, the interference with State business, and the waste of time in vacating twenty rooms and removing the furniture and equipment into offices already overcrowded, can be readily seen. I would suggest in this connection that the congested condition be relieved by the erection of an office building over, or in connection with the proposed heating, lighting and water plant. With this provision a number of minor offices could then be transferred to the new building, and the State House would then furnish ample accommodations for the remaining State departments and the Legislature for many years.

I desire to call your attention to an opinion of the Attorney-General in reply to a request from this department for advice as to whom, if anyone, had authority to remove, assign or rearrange the various offices in the State House as public interests demanded. The opinion by the Attorney-General, now on file in the Custodian's office, says, in substance, that no one has such authority except the Legislature. Therefore, I would urge that as a more practicable way of meeting these conditions as they arise, that the authority to remove, assign and rearrange the various offices in the building, at any time in the future, be vested in a commission composed of the Governor, the Auditor of State, and the Secretary of State.

In conclusion, I desire to acknowledge the courteous treatment accorded this department by all the officials and employes of the building. I must commend the employes of this department also for their faithful performance of duty, believing that they have always endeavored to render good service.

Respectfully submitted,

OTWAY A. BAKER,
Custodian Public Buildings and Property.

ANNUAL REPORT

OF THE

STATE VETERINARIAN

FOR THE

Year Ending September 30, 1908

TO THE GOVERNOR

INDIANAPOLIS:

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING.
1908.

THE STATE OF INDIANA,

EXECUTIVE DEPARTMENT,

November 21, 1908.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,

INDIANAPOLIS, December 1908.

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

JOHN C. BILLHEIMER,

Auditor of State.

December 14, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,

Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 15, 1908.

FRED A. SIMS,

Secretary of State.

Received the within report and delivered to the printer December 15, 1908.

HARRY SLOUGH,

Clerk Printing Board.

REPORT OF THE STATE VETERINARIAN.

GOVERNOR J. FRANK HANLY, *Indianapolis, Indiana*:

SIR—I herewith submit the following annual report for the year ending September 30, 1908, as provided by the act of the legislature creating the office of State Veterinarian.

This report is divided into three parts; first, that pertaining to the police work and the financial statement; second, that relating to tuberculosis among stock; and third the laws relating to the control of diseases among live stock.

The first part is very brief, as the State is very free from those diseases which necessitate police measures for their control. There has been the usual number of cases of glanders, thirty-five horses being condemned by the State and fourteen others killed without such formality. There were only three centers of infection of any consequence. Sixteen animals were found to be infected at the first, fourteen at the second, and six at the third, or two-thirds of all the known cases have occurred at these points. This disease is therefore one over which we have almost complete control.

Scab in sheep is rarely reported except from an occasional shipment on arrival at a stockyard, and mange in other animals is of small consequence.

The disease which is increasing and which threatens to cause greater loss of stock as well as of human life is rabies. This disease is increasing in the number of outbreaks and in the number of animals affected, and also in persons bitten. There is no doubt but that the number of cases and the danger are greatly exaggerated by the public press; nevertheless, the true cases are increasing at such a rate as to necessitate general measures for its control. The disease is spread almost wholly by the dog, and any measure to be effective must deal primarily with that animal.

This office would advocate an increase in the dog tax to such a point as to make the keeping of mongrels very unprofitable, and require that the constable in each township should kill all dogs on which no tax had been paid, the killing to be done in April and October of each year and a fee to be paid for such work, to come from the dog tax fund. Muzzling is effective and should be enforced whenever an emergency arises.

The problem of the control of tuberculosis in cattle and hogs is assuming more concrete form and is taken up in detail in the special section on that disease.

It has been evident for some time that certain firms who claim to control hog cholera by inoculation methods are spreading the disease in this State. The present law is in need of some modification to prevent the use of living germs in this or any other disease which may cause losses upon other premises. These methods may be improved so that they will not be a menace to stock owners as a whole, but in the meantime power should be given to the State Veterinarian to prevent the sale or use of such agents as may cause an outbreak of an infectious disease.

I desire to call attention again to the need of an amendment to the law to meet a new condition. Cattle and horses shipped from this State to some other States and to Canada must be tested to insure a clean bill of health. These tests must be made or certified to by an official. The service is for the benefit of the individual, not for the State. There are breeders of cattle who desire a like service for their own benefit, and dairymen who wish such certificates for advertising a milk from a tested herd. In all these classes the individual is concerned and the service should not be rendered to him at the public expense. I would suggest that an amendment be added which will permit the performance of this work for a fee, and that such fee be paid into the treasury of the State.

In a previous report attention was called to the fact that the research work in stock diseases was of more importance than the police control. By arrangement with this office and the Purdue Experiment Station the work was done jointly and four bulletins were issued as follows, "Diseases of Sheep," "Diseases of Swine," "Examination of Horses for Soundness," and "Characteristics of Some of the Contagious and Infectious Diseases." These bulletins aggregate 249 pages, each had an edition of 15,000 copies and cost on an average of \$1,500 each. The franking privilege saved about \$400 on each issue. The bulletins were sought for and appreciated by stock owners. The State was a gainer by such an arrangement, as was also the station, the former in a financial way and the latter in obtaining access to material not otherwise available. This arrangement was terminated by the station, and therefore some other provision should be made to continue the publications.

FINANCIAL STATEMENT.

Expenses for the Month of October, 1907.

A. W. BITTING,
State Veterinarian,
Lafayette, Ind.

TUBERCULOSIS.

Tuberculosis is one of the oldest of the known diseases of domesticated animals and man, and has received much attention from veterinarians and the medical fraternity. The exact nature of the trouble had been in question until Villemin showed in 1865 that it might be communicated from the diseased to the healthy animal. It remained for Dr. Robert Koch to discover and demonstrate the bacillus tuberculosis to be the specific cause of the disease, in 1882. Prior to these discoveries the disease was believed to be due to breeding, heredity and stable miasmata. Because of these misconceptions of the real nature of the trouble no permanent progress had been made in arresting or stamping it out. The recommendations of authorities varied constantly and often in opposite directions. The practices at one time or place would meet with reversal at another. Since the discovery of the contagious nature of the disease, the specific causative agent, and the means by which it is spread, numerous scientifically conducted investigations have been made, resulting in practical methods for its control and final elimination. The disease being slowly contagious, and of very slow development, has necessarily made the work tedious and at times uncertain. So much has been done, however, by different persons and in different countries, with such unanimity of results that it would seem as though by the practical application of this knowledge every owner might have a herd free from disease in a few years.

Prevalence of the Disease. The chief of the United States Bureau of Animal Industry has recently estimated that the losses among live stock in this country due to tuberculosis are about \$14,000,000 annually. This loss is almost wholly among cattle and hogs, and is due to deaths from disease, losses from condemnations at slaughter, and a low estimate upon the loss in thrift or fattening power, and decreased milk flow due to disease. It is estimated that ten per cent. of all dairy cattle, one per cent. of other cattle, and three per cent. of hogs are affected. These figures differ but slightly from those obtained from examinations made in this State, and upon that basis we can estimate that between 50,000 and 55,000 dairy cattle, about 8,000 other cattle, and from 120,000 to 130,000 hogs are affected in this State, or about 2,000 animals for each county. These figures may seem high, but

are probably under rather than in excess of the mark. It must not be inferred, however, that each case constitutes a complete loss. Some animals will die, some will be condemned upon post mortem, some will eat and make no returns for the food consumed, while others will be fit for food, milk production, or as breeders. The total loss from this disease is second only to that from hog cholera.

During the fiscal year 2,090 cattle were tested, of which number 265 reacted, or 12.5 per cent. The number of herds tested was 54, and 26 herds, or 51 per cent., showed no cases.

Five herds were suspected of having tuberculosis and 49 were tested without the disease being suspected. The five herds numbered 239 cows, of which 157 reacted, or 66 per cent. In the non-suspected herds there were 1,851 cattle, 108 of which reacted, or 5.8 per cent. These figures are slightly higher than those previously obtained in about 3,000 tests made by this office and the Experiment Station. Testing has also been done by city officials and private individuals, upon which this office has no record.

The extent to which the disease occurs in beef cattle and in hogs can only be obtained from slaughter-house records. These are not available in our own State at the present time, but doubtless will be next year, as government inspection has been established at a number of the smaller cities, where it will be possible to obtain the origin of all stock. This much is known, that the disease does not occur in the hog except as contracted from cattle, either from being permitted to follow and eat the droppings, or being fed infected milk. It has been shown by both Rogers and Peters that only about 5 per cent. of the farmers deliver tuberculous hogs to slaughter houses. In 1907 31,815,000 hogs were inspected at the various packing establishments and 430,177 were found to be infected.

Indiana stands in the position of having about the average amount of disease for the entire United States. Some States show a very much higher per cent., as do also the records for some of the foreign countries.

The Tubercle Germ. The germ, or tubercle bacillus, is a rod-like plant or micro-organism, so small that it would take ten thousand placed end to end, or one hundred thousand arranged side by side to measure one inch. The germs occur singly, in pairs, or connected in short chains. These germs have very slow growth and attain their maximum rate at the body temperature. They have no power of movement. They are possessed of great vital-

ity, resisting high temperature, freezing, thawing, moisture, drying, putrefaction, and even digestion. They are killed quickly by boiling water, also by a temperature of 158 degrees for ten minutes or 145 degrees for twenty minutes. The germ will be killed by direct sunlight in a few hours, but will stand strong diffuse light for a week, and live in the ordinary room from one to three months. It is not known how long the germs will live in dark stables or basements of barns. They do not absorb liquids readily, and are therefore resistant to the usual methods of disinfection.

Owing to their strong vitality they may be dried and mixed with dust, disseminated by sweeping and currents of air, be inhaled or ingested with food, be distributed with secretions on mangers and watering troughs, be carried in milk and withstand the souring process, or remain hidden in a piece of meat and survive if not thoroughly cooked.

The germs are coughed up and discharged with the breath in expiration or they may be swallowed and pass off with the feces. If the udder be infected, the germs will be discharged with the milk, or if there be superficial or open surface lesions, they will be discharged the same as from any abscess.

There are some slight differences in the characteristics of the germs found in cattle and in the human, and therefore the controversy as to the identity and intercommunicability of this disease from animals to man and vice versa. A third type of tubercle bacilli is found in birds.

Predisposing Causes. The predisposing causes are those which tend to make the body less resistant, to favor the protection of the germs while outside the body, and to disseminate them to healthy stock. The causes may, therefore, be grouped under two heads, those pertaining to breeding and those affecting the hygiene.

It has been observed so often that tuberculosis occurs in certain herds and families of cattle (and in families in the human) that there has come to be a strong belief that the disease is hereditary. In-and-in breeding, close-line breeding and breeding too young are held responsible by many for the occurrence of the disease. The investigations in the past few years have shown that these factors are not sufficient to cause the disease, and that the most that can be ascribed to them is a weak constitution or lack of resistance, especially to this particular germ. It has been shown that only about two calves out of a thousand have tubercu-

losis when born, and if they be taken away from the tuberculous mothers and stable and fed on milk free from tuberculosis germs, that they will remain healthy. The young contract the disease from the milk, and from the germ-laden air in the stable. The high percentage of tuberculosis in a given herd is due to the fact that the animals are kept together constantly, and the often-repeated opportunity for the healthy to obtain the germs from an infected individual. Close breeding tends to intensify certain characters which it seems desirable to establish, but if a weakness exists the tendency is to become weaker and thereby become more easily susceptible to disease.

The sanitary surroundings undoubtedly have an influence upon health and vigor. These of themselves are insufficient to cause the disease if they be bad, or to prevent it if they be good. Dark, damp, dusty, illy ventilated, filthy and crowded stables can have none other than a bad effect upon the body, whether this disease be present or not, but herds kept under these conditions have been tested and no trace of tubercle has been present. Such conditions do afford the best possible environment for the rapid spread of the disease when once the germs are introduced, and for maintaining their vitality for a long time. The best type of sanitary barn or stable will not suffice to prevent the disease if the germs be introduced with some animal. Under conditions of light, proper ventilation and cleanliness the animals will have greater resistance, and other things being equal, the germs will not live as long outside the body or be so virulent, the effect being to lessen the rate of spreading. The disease will spread among cattle when kept in the open field with no protection other than a woods shelter or a shed. Herds kept under such conditions have shown a high percentage of disease. It is claimed that the native-range cattle in the West are free from the disease, but that cases are becoming common when affected pure-bred stock have been introduced for improving the herds. The fresh-air treatment will not prevent nor cure the disease in cattle, it only checks the spread and retards the rate of body invasion.

Attention needs again to be called to one form of stable construction which is particularly favorable to the spread of the disease, that of stalling the cattle so that they face each other and leave only a narrow feeding alley between. This arrangement gives the maximum opportunity for the spread of infection. The breath is blown directly into the face of the animals standing opposite and at either side. One cow discharging tubercle con-

stantly inoculates five others through the breath and by particles coughed upon the food. During the past fifteen years the writer has seen several examples of the spread of the disease in this manner, and post-mortem examinations show the various stages from the original or oldest lesions in one animal to the newest lesions of the latest infected. From a sanitary standpoint it is preferable to turn the heads toward the wall.

Period of Incubation. In all contagious diseases there is a period between the time of exposure and the development of the disease which is known as the period of incubation, and which is fairly constant for most diseases. This period is not determined with any degree of certainty for tuberculosis, but seems to vary from a few days to some months. This period appears to vary so much that any given time for a quarantine, or for holding cattle known or supposed to be exposed, cannot be suggested. During this period tuberculin will not produce a reaction. The uncertainty in regard to this period makes the separation of all cattle into healthy and tuberculous on one test an impossibility, especially in herds having considerable disease present. Where tuberculosis is found in a herd it is best to test once in six months until all trouble is passed.

Effect Upon the Body. The effect of the germs upon the body can be clearly seen upon post-mortem examination. Wherever the germs are located, they produce irritation and destruction of tissue. This takes place slowly so that the body tends to wall the diseased point off by developing a capsule about it. The interior of this capsule contains the broken-down tissue, pus, and germs. These points are small at first, scarcely as large as a pinhead, but as destruction goes on within the capsule, they continue to enlarge, and thus form the small pearl-like bodies, which give rise to the name "pearl-disease;" larger ones also form, becoming the size of a pea. If two or more points of infection be sufficiently close together, they will unite and form nodules the size of grapes, and this has given rise to the term "grape disease." In extreme cases these masses become several inches in diameter. If the disease be arrested at any stage, the capsule will become very fibrous and tough, the contents will be partially dried and may become calcareous or gritty from deposits of lime. In the progressive stage the capsule may be disintegrated as well as the walls of some of the air passages, any cavity in the body, or a blood vessel. If an air passage be involved, there results the discharge of the tubercle with the respirations which are raised by breathing or coughing and

either exhaled or swallowed. Some of the germs will be sucked into other parts of the lungs and set up new points of infection. There may be a breaking through the lung into the pleura and tubercular adhesions be formed between the lung and pleural wall of the ribs. If the germs should break into a blood vessel, they will be carried to any part of the circulatory system, producing lesions at any point—in the kidneys, liver, along the alimentary tract, in the muscles, or in the bones. Tuberculosis very often involves the lymphatics, as the glands in the throat, along the trachea, between the lungs and in the abdominal cavity.

The usual course of tuberculosis is slow, and therefore the disease may remain in an encapsulated state in the body for a long time before being suspected or causing appreciable harm. It may be arrested at any point so long as it remains encapsulated, and may heal. The disease may progress for a long time and slowly involve large areas of the lungs or other organs without causing much inconvenience to the subject so long as there is no discharge. Again the disease may run a rapidly acute course in the event rupture takes place, so that the germs may be sown at numerous points in the lungs, along the intestinal tract, or through the circulatory system.

The lesions of tuberculosis are found most often in the lungs or the glands connected with the respiratory tract. Formerly this was supposed to indicate that infection took place through respiration, but later investigations have shown that such a conclusion was not warranted. Animals purposely infected through the digestive tract, or by subcutaneous inoculation at any point of the body, have shown a development of lesions in the lungs. When the lesions are confined to one organ, it is localized; when in two or more organs and in different parts of the body, it is called generalized.

Symptoms. Tuberculosis is characterized by a variety of symptoms depending upon the point of involvement, the extent of involvement, and the acuteness of the disease. In the early stages or in localized tuberculosis there may be no symptoms sufficiently marked to attract attention. The general health and condition for either beef or milk may be excellent. It is a fact that some of the prize-winning steers on hoof at the fat stock shows have been affected, sometimes to the point of causing the carcass to be condemned when placed upon the block. Sometimes a cow giving very large quantities of milk will be found to have great quantities of tuberculous material within her body.

Whether there are symptoms present or not depends in a large measure upon the care and feeding of the animal. If the animal be kept well housed, well groomed and well fed it is almost inconceivable the extent to which the disease can progress without attracting attention. The development is so slow that the organs adapt themselves to the diseased conditions. If diseased animals be exposed to inclement weather or be short on feed, then the symptoms develop rapidly and are characteristic.

If the disease affects the lungs or air passages, there is first a rather slight but harsh cough which after a time develops into paroxysms, and apparently becomes more painful. The coughing is first noticed when the cattle get up after lying down, then whenever dust is raised in feeding, and later after any slight exercise. As the disease advances, it will be seen that the animal chills easily on exposure, especially in a cold rain, the hair takes on a rough appearance, the skin becomes tight, the neck thin and lean, there is a general wasting of the body, a prominence of the eye, and evidence of weakness. The symptoms will be much more pronounced at one time than at another.

If the chest be examined carefully, especially if the wall be thin, areas may be found to be dull on tapping, or there will be soreness on pressure along the ribs. If the ear be applied to the chest wall, abnormal sounds may be distinguished in some cases, due to abscess cavities, consolidation of the lungs, or pleural adhesions.

There may be more or less whitish, mucous discharge from the nostrils after coughing. The glands in the throat are often enlarged and tender to pressure.

If the disease involves the digestive tract, as the liver, intestines, mesenteries and peritoneum, there are even less characteristic symptoms. There may be attacks of bloating, constipation, diarrhoea, suspended rumination, depraved or voracious appetite, and colic. More often the animal is merely classed as a hard feeder, and while it may do well for a time, it may suddenly go off and lose all in just a few days. The animal is often out of condition. There is loss of flesh, a gaunt appearance, and in the case of a milch cow a cessation of the flow of milk.

The acute cases run a course in a few weeks, while the chronic cases may last for months, but gradually waste away. The disease in calves is probably most often of the intestinal form and runs a course quickly.

When the bones and joints are affected, there is lameness first of a rheumatic type, then of a chronic character.

The temperature fluctuates between 99.5 and 104.5 degrees, the normal being 101.5. The pulse and respirations also vary.

In considering the physical symptoms of tuberculosis the history of the herd as a whole should be taken into account. Unthriftness, a cough, abortion, loss of young, decreased milk yield, and cases of emaciation within a couple of years should always be taken into account. The presence of these conditions should arouse suspicion. It is always true that the disease is not confined for a long time to a single animal, in time several animals are bound to be affected. The longer a herd is kept together without change, the more certainly will a considerable per cent. be affected if the disease has been introduced. In a herd of 175 cattle tested the first time 25 per cent. were found to be affected, five years later 75 per cent. were affected, and at the end of eight years 100 per cent.

TUBERCULIN.

Tuberculin is the liquid upon which tubercle germs have been grown for some time and contains the products produced by the growth of the germs. This liquid is filtered through porcelain to remove all bacteria and is then heated and concentrated to the desired degree. It contains no living germs and in order to maintain it in a sterile condition carbolic acid or thymol is added and it is bottled in small sterile bottles. The preparation of tuberculin is purely a laboratory operation requiring great care. It consists in sowing pure culture tubercle bacilli in flasks of sterile bouillon, maintaining them at a constant body temperature for several weeks until the active substance has formed, and then filtering and concentrating. The tuberculin used in official work is that obtained from the government laboratories. It should be fresh.

Tuberculin cannot produce tuberculosis or any other disease. It causes no disturbance to the body when injected into a healthy animal. It will cause a temporary rise of temperature in the tuberculous animal. There is no evidence that it causes a latent case of tubercle to become active, but it may make some cases in the active stage become worse.

The effect of tuberculin upon healthy stock was studied by Dr. Law at Cornell University. Seven injections were given to healthy cattle at intervals of one week without any appreciable

effect upon the health, milk production, quality of butter fat, body weight, temperature, pulse, or respiration. Many herds have been tested annually for several years and no ill effect noted.

The Tuberculin Test. The tuberculin test is the most reliable means known for the detection of tuberculosis. Dr. Melvin, Chief of the Bureau of Animal Industry, reports that out of 23,869 reacting animals slaughtered, 23,585 showed lesions of the disease, or 98.81 per cent. Other officials have reported similar results upon slaughter tests of small numbers. Slaughter tests made upon animals which failed to react have shown the absence of the disease. No other diagnostic test is known to be more nearly accurate for this or any other disease.

The test should be conducted with care and judgment at every step, observing that the animals are kept in as nearly a normal condition as possible, that the feeding, watering, milking, etc., is done at the regular period, that unnecessary visitors are not permitted upon the premises, and that no unusual excitement should take place. An animal suffering from any septic trouble, as garget, or has recently aborted, or is in a very advanced stage of pregnancy should not be tested. It is preferable that the testing be done at a time when the cattle are accustomed to being stabled, especially in the spring and fall. The test may be made in the summer, but if the weather is very hot and the cattle accustomed to pasture, the work will be very disagreeable, and errors are almost certain to occur.

The method which this office has followed and which is recommended for this State is as follows: First stable the cattle about noon and take the first temperature per rectum at one o'clock, the second at three, and the third at six o'clock. The tuberculin is injected at eight o'clock, the amount given being made proportional to the size of the animal. The point selected for injection is along the side of the neck, just in front of the shoulder, or behind the shoulder blade, the object being to get a thin point in the skin. The point selected is first washed with a strong antiseptic solution, the sharp needle inserted quickly and the operation completed in a few seconds. On the following day the temperature should be taken at six, eight, ten a. m. and twelve o'clock. On all animals upon which no rise of temperature has occurred no further readings are necessary, but upon suspicious or reacting animals it is best to continue one or more readings at the same interval. There is a possibility of an occasional animal reacting after the sixteenth hour, but this is so uncommon that a change in the

practice here outlined is scarcely justified. When the cattle are given water in the morning or evening this should be done after a temperature is taken rather than before, as a large drink of cold water within a half hour of making a temperature reading may show an unwarranted drop.

The object in taking the temperatures on the first day is to determine the normal temperature. This is most often about 101.4 degrees, but may vary from 100 to 102. There may be drops below this mark and sudden elevations above 102 without any evidence of disease. If the temperature remains continuously above 102 a test should not be made.

If the animal be free from disease, the temperature upon the succeeding day will remain essentially the same as on the first. If tuberculosis be present there will be a rise of temperature above that of the day before, and this rise of temperature will begin in from eight to fourteen hours after the injection, continue from six to eight hours, and then gradually return to the normal. In a few cases the rise begins in about six hours, but these are caught on the first temperature reading, and a rare animal will have what is known as a delayed reaction, or the beginning of the rise of temperature will occur later than sixteen hours after the injection. These will escape detection by the plan now followed. It was formerly the practice of the writer to take nine temperature readings both before and after the injection, and from these the temperature curve could be seen easily. The following are typical temperature reactions:

	A. M.			M.		P. M.			
	6.	8.	10.	12.	2.	4.	6.	8.	10.
Manada—

23.....	100	102	103.4	105	105	104	103.4	102.6	101.8

The injection of tuberculin was made at ten o'clock at night.

It has been found unnecessary to take so many temperatures in order to get practical results, and under the present system this temperature curve is not so apparent. A very sudden rise and fall of temperature is not indicative of the disease. The amount of rise in temperature may be said to bear some relation to the extent of the disease. A very high rise of temperature is most often associated with an incipient stage of the disease or very small localized lesions. A slight rise is most often associated with rather extensive or well-defined disease areas. In very advanced cases no rise of temperature may occur, but such cases nearly always give physical evidence of trouble. This relation of temperature to the state of the disease is due to the fact that the addition of a small quantity of toxine to that already in the body in the case of slight disease is sufficient to cause a rather marked transient poisoning, while the addition of the small dose to that already present in the body in extensive disease is not sufficient to overcome the body tolerance, and therefore little or no rise of temperature follows.

There are many who set an arbitrary degree of rise of temperature as sufficient to condemn an animal as having tuberculosis. Such a course cannot be justified in practice. It is a fairly safe rule to follow to condemn on a rise of two degrees or more, but there are exceptions which call for the exercise of good judgment. A nervous, fretful animal may have a temperature of more than two degrees without being diseased, and the heavy, slow moving animal, or advanced case, may have less than two degrees of rise of temperature and yet be diseased. It is in such cases that experience and the careful observation of all other factors becomes necessary in making the tuberculin test.

In addition to the rise in temperature there are other points to be observed in a tuberculin test, as more or less looseness of the bowels, loss of appetite and of rumination, a gaunt, drawn appearance, lack of luster and tightness of coat, stiffness in walking, and dullness of the eye. An increase in the rate of breathing may also be noted. Any tenderness or swelling at the point of injection should also be recorded. More or less disturbance of body functions is to be seen in almost all reacting animals, and therefore the careful observer will weigh all in drawing his conclusions.

The tuberculin test will fail in an animal during the period of incubation and should therefore be reapplied in about six months. This is important in herds where a considerable percentage is affected.

The tuberculin test may fail in very advanced cases, but these usually have physical evidence of such character as to indicate an increase in the dose or warrant quarantining the animal.

The tuberculin test may fail if repeated too soon, within sixty days. The unscrupulous will sometimes use this agent a couple of weeks before an official test is made in order to insure the passing of an animal. If a retest is to be made within sixty days of the first test the dose should be doubled.

The tuberculin test may fail if the animal has tuberculosis in a completely arrested form, and a reaction occur later when activity has again taken place. The number of such failures is small and most likely to occur in herds where several animals are affected.

A failure to react is not positive proof of freedom from disease, but the errors in interpretation will be small if all the foregoing factors have been kept in mind.

A herd in which reacting animals have been found should be tested at least once a year and preferably once in six months in order to eliminate the diseased ones promptly. A herd in which no reacting animals are found need not be tested if new blood is not added. The writer knows of herds which have given no reaction in the past twelve years though repeatedly tested.

In testing a number of herds in any locality there will be some which will show a high percentage of reacting animals, and this occurs most often among pure-bred stock. This has created a prejudice at times against pure-bred stock which is wholly unwarranted. The reason for such occurrence is that such stock are usually kept together for a longer time than the common stock, and if the disease has been introduced at any time it has a longer period in which to spread. Grade herds, if kept under like conditions, will show a similar invasion of disease. If any considerable number of herds are tested, a number of animals can always be traced to a few herds as centers for the dissemination of the disease, thus adding proof of its slowly contagious character.

The Control of Tuberculosis. Since tuberculosis is a slowly contagious disease, produced by a particular germ, the bacillus tuberculosis, and since such germs are communicated from one animal to another by close contact, by being in the same stable or pasture, by infecting the feeding trough and soiling the food, and by means of the milk, it follows that if we eliminate the diseased stock from the herds, clean up the premises, and do not

use the raw milk from diseased animals, that the disease may be controlled. Glanders does not prevail among horses in this State, because the precaution is taken at once to cut out the affected. Tuberculosis would not prevail if similar steps were taken.

Until the discovery of mallein there was no positive means of recognizing all cases of glanders, and the disease persisted in spite of the efforts made to stamp it out. Indiana has only about forty cases of glanders each year, and these arise from outside infection. Horses are condemned upon the mallein test in order to protect the industry as a whole.

Tuberculin stands in the same relation to tuberculosis for its control as does mallein to glanders. By its judicious use any one may separate the diseased from the healthy stock in his herd. The difficulties will be large or small depending upon the per cent. affected and the length of time the disease has been present. As a State police measure the task appears to be of enormous size because of the number of animals to be tested and the expense involved.

As far as the control of the disease is concerned in the private herd, there are two problems—those herds in which no reacting animal is found, and those in which one or more are found. Herds in which no diseased animal is found should be kept free by taking in only such cattle as are found to be free upon test. If the herd be pure bred or valuable, the force of this argument will appeal to the owner at once. If the herd be of grade stock and very ordinary in quality, the owner will complain that he cannot purchase tested cattle to replace those which he must turn to market. Such will probably be the case especially at first, and yet the inconvenience and loss will be less in the long run than the average loss which occurs from tuberculosis. The general result will be to retain the really good animals and take fewer chances on the indifferent.

A second precaution with such herds is to see that the calves receive milk from their own mothers or, if from outside source, that it is sterilized. Where the milk is hauled to a skimming station and mixed milk is received in return it should be heated to 155 degrees for at least ten minutes. It has been shown by several investigations that the disease has been introduced into herds through the use of raw, mixed, creamery milk first infecting the calves and then spreading to the older cattle.

The herds in which tuberculosis is found to exist in one or more animals, presents a much greater problem for its satisfactory

handling. If it be assumed that in a herd of thirty animals only one or two react and these are comparatively recent additions, they may be removed, the premises disinfected and the trouble is almost certain to stop at once. Under such circumstances it would be far better to sacrifice the animals than to try to keep them for any purpose at some distance from the healthy herd. The inconvenience of separate handling of the animals and their products is too great to warrant the procedure with ordinary stock. One or at most two subsequent tests at intervals of six months ought to develop the fact of any spread of the contagion, and the subsequent handling would be the same as in a herd in which no disease was found to exist.

If, however, it were found that forty, fifty or more per cent. of the cattle react, it would be conclusive evidence of the prolonged and continuous discharge of the infecting agent. If the animals were valuable because of breeding, then it might be profitable to divide the herd and retain both in separate buildings and pastures, and preferably attended by different help. The healthy cattle should be retested and any future reactors turned in with the diseased herd. The calves from the reacting mothers might be removed at once and placed upon the milk from the healthy lot or fed upon pasteurized milk, in any event, taken from the reacting mothers and their environment. When a few months old, they may be tested and, if found free, be placed with the healthy lot. This method is known as the Bang method and has been used abroad with the most gratifying success. It has been used with good results in this country, but there are many who consider that it necessitates too much work. This method is particularly applicable to the handling of valuable pure-bred stock without the sacrifice of all the labor, time and money that comes from immediate slaughter. By pursuing such a course the reacting herd will gradually decrease and the healthy herd increase by the young until in from three to four years it will equal the original number.

The writer is of the belief that this plan might often be followed profitably with dairy stock. If several herds in the same neighborhood are tested, it would be well for the dairymen to combine and let one of their number care for all the reactors rather than either sacrifice or have the expense of separation on the same premises. Separation will do little good unless it be complete, and it can be done better upon different farms in which the attendants have nothing in common.

In advising the separation of the diseased from the healthy without immediate slaughter, it is upon the basis of the tuberculin reaction without other evidence of disease. Whenever an animal has the disease in such advanced form as to show physical evidence, then slaughter should be compulsory at once. Those giving a tuberculin reaction only may have the disease in such mild form or in an arrested state and be valuable as breeders or for milk production for years, and immediate slaughter might mean the unjustifiable sacrifice of property.

Disposition of Reacting Animals. There have been those who have advocated the slaughter of every reacting animal and destruction of every part except the hide, the grease and the body for fertilizer. There are still some who advocate such a policy of extermination, the owner of the cattle to be reimbursed from the public treasury. Thousands of dollars have been squandered in this way and the work resulted in failure. Such a position is not justified by the experience of any State government.

The United States Bureau of Animal Industry has established meat inspection rules which are a safe protection to the consumer of meats, and these include the following provisions for passing or condemning an animal having tuberculosis:

“Generalized” tuberculosis refers to that form of the disease in which the bacilli have been disseminated through the blood and lymph, and in which a number of organs are affected. “Extensive” tuberculosis refers entirely to the amount of tuberculosis matter and the number of tubercles, and may apply to a case which is confined to one of the body cavities.

(1) The carcass may be passed when the lesions are limited to one group of lymphatic glands or one other organ.

(2) The carcass may be passed when the lesions are limited to two groups of visceral lymphatic glands in either the thoracic or the abdominal cavity.

(3) The carcass may be passed when the lesions are limited to two visceral organs (other than lymphatic glands) in the thoracic or the abdominal cavity, provided the lesions are slight, calcified and encapsulated.

(4) The carcass may be passed when the lesions are limited to one group of visceral lymphatic glands and one other organ in the thoracic or abdominal cavity, provided the lesions in the affected organs are slight.

(5) The carcass may be passed when the lesions are con-

fined to two groups of visceral lymphatic glands and one other organ in the thoracic or the abdominal cavity, provided the lesions are slight, calcified and encapsulated.

(6) The carcass may be passed when the lesions are confined to the lungs, the cervical lymphatic glands, and one group of the visceral lymphatic glands of the thoracic cavity, provided the affection is slight and the lesions are calcified and encapsulated.

(7) The carcass shall be condemned when well marked lesions are discovered in both the thoracic and abdominal cavity.

When we consider that animals will react to the tuberculin test in any stage of the disease, it becomes evident that many will pass on post-mortem examination. It is, therefore, much more rational to slaughter under these regulations and pass or condemn as the particular case may warrant. This is the policy pursued in this State as well as in some others, and it insures to the owner the block value of the animal. If the disease be advanced, then he can receive only the value of the hide and the carcass as grease and fertilizer, and if it be slight and passes, he should receive the full value for beef.

In the case that an animal reacts and it is decided to slaughter, it is not necessary to slaughter at once. The owner is given the privilege to dry a cow properly and to feed until the animal is properly prepared for market. This provision often prevents putting up an animal thin in flesh and of very low market value and gives the owner the opportunity to make the best out of his animal. The animal must be killed at a slaughter house having Federal inspection, or a State officer be notified so that the same rules may be applied if the killing be done at a local market.

The point upon which there is most disagreement is in the use of the milk. Most board of health officials would exclude the milk of all reacting cows as being dangerous. The State law prohibiting the use of milk from any diseased animal is made to apply sharply and severely. This office does not hold to this opinion and believes the law should be speedily changed. The milk from many of these reacting cows contains no tubercle from infection through the gland or from without. Some of the milk will be infected and this can be rendered safe by pasteurization and used as milk, ice cream, cream or butter. The tubercle bacilli are easily killed and at a temperature below that at which the milk is injured. A temperature above 145 degrees for twenty

minutes or 155 degrees for ten minutes is sufficient. Such being the case, it would be preferable to keep valuable cattle and use their milk in a pasteurized form rather than destroy upon a reaction to the test. In foreign countries where most progress has been made in the study of this disease and the methods of control, the pasteurizing of the milk from the reacting animals has become a fixed policy. The Bureau of Animal Industry has shown the folly of municipal and State condemnation of the carcass simply upon test, and it is to be hoped similar rational measures will be followed with regard to the safe handling of milk.

Valuable animals may be retained for breeding purposes, but the offspring should be removed early and reared upon the milk from healthy cows or upon milk which has been pasteurized.

Males may be kept for breeding purposes provided that they do not run with the herd. This is not advised, however, unless they be of good breeding and in good physical condition.

Relation to Public Health. The relation of bovine to human tuberculosis is no longer a matter of controversy except in degree. There is no longer doubt in the mind of investigators concerning the fact that the disease may be transmitted through the use of tuberculous milk and meat. The only point in question is the frequency. Dr. Koch and those who accept his teachings, believe there is sufficient difference in the so-called bovine and human types of the bacilli to preclude the bovine type being a very virulent organism in the human body. The bovine type is usually found in that form of the disease in which the lymphatic glands and abdominal viscera are affected rather than in the more common or pulmonary type. Such being the case, the occurrences of bovine origin would largely predominate in children, as they are more prone to the intestinal form of disease, rather than the adult.

There are those who believe that the disease is very frequently contracted from the use of milk from tuberculous cattle, and this conclusion has been reached very largely from the fact that bovine bacilli are very virulent for pigs, guinea pigs, calves, and other animals used for experimental purposes. They claim that the differences observed in the two types of bacilli as first seen when taken from the two sources, lose their distinguishing characters upon culture, or after a few generations, when grown upon the same soil, and therefore the precise origin cannot be determined by an examination of the subject. These are matters in controversy and will be settled on continued investigation. The bovine

type of bacilli are particularly virulent for all mammals usually employed for testing purposes, and the deduction has followed that such must be true for persons. If such were true, then there would certainly be a wiping out of the population of those countries in which twenty per cent. or more of the bovine population is tuberculous. The position of milk tester at creameries and milk skimming stations which necessitates the testing of thousands of samples each year, would be extra hazardous, a condition not in accord with observed facts.

No matter what the future may decide to be the truth concerning the amount of infection derived from cattle, there seems to be conclusive evidence that some cases do arise from that source and to warrant a vigorous fight for eradication, for proper meat inspection, and the pasteurization of milk from reacting and untested animals.

The danger from the use of tuberculous milk is not limited to that of animals with tubercular lesions in the udder or discharging tubercular germs in the milk. If the danger were limited to such animals, only a small per cent. of reacting animals would show the presence of tubercle in milk or tubercular lesions in the udder on post mortem examination. The great source of bacilli has been demonstrated to be of faecal origin, the manure bearing these germs dropping from the sides of the cow and udder into the milk and the dust of the stable.

The Status of Tuberculosis Under the Law. Tuberculosis is recognized as a contagious disease, and as such must be reported to the State Veterinarian, and any owner or other person knowing the existence of such disease and failing to make such a report renders himself liable to a fine.

The disease is recognized as being slowly contagious, and therefore only suspected or diseased animals may be quarantined by the State Veterinarian. This provision was inserted in the law for the explicit purpose of preventing indiscriminate condemnation of animals reacting to the tuberculin test.

The tuberculin test is not compulsory, but may be used for the purpose of assisting in making a diagnosis.

When an animal is declared to be tuberculous by the State Veterinarian, such animal must be held in quarantine at the expense of the owner, who may prepare her for market and sell, subject to post mortem examination, such examination to be made at a slaughter house having Federal inspection, or by an agent

from the office of State Veterinarian. If the case be advanced, the advice will be to slaughter at once.

The State does not compensate for animals lost from tuberculosis.

According to the general act of the legislature milk from sick or diseased cows cannot be sold in this State. When a cow reacts to tuberculin, although there may be no physical evidence of trouble, she is declared to be affected with tuberculosis and therefore the milk is barred from the market. (Act of legislature, approved March 4, 1907. Sec. 3.)

The foregoing provision needs to be modified to permit the use of milk from the apparently healthy, if pasteurized.

A number of the cities in the State have passed ordinances making the tuberculin test a necessity upon cows used in the milk supply. These ordinances are local and their provisions vary greatly. Cattle found to be tuberculous under such inspection should be reported just the same as others, and the disposition made according to the State law.

The city of Chicago has passed an ordinance requiring the application of the tuberculin test to cattle furnishing milk, butter and cheese. The milk from other cattle will be accepted if properly pasteurized. The milk from reacting cattle will be accepted if the animal shows no physical evidence of disease and the milk is pasteurized. This ordinance affects the milk product from about 15,000 cows in the northern part of the State.

Tuberculosis is recognized as a contagious disease by many governments, including our own, and they demand a clean bill of health on the part of all cattle imported for any purpose other than immediate slaughter. The tuberculin test is made the basis of the certificate. A number of the different States have enacted similar laws for preventing the introduction of tuberculosis by traffic in cows. These States are Arizona, Indiana, Maine, Massachusetts, Minnesota, Montana, New Mexico, New Hampshire, New Jersey, North Dakota, Pennsylvania, Rhode Island, Texas, Vermont, Washington, Wisconsin and Wyoming. Canada makes a similar requirement for all cattle entering from the United States.

By virtue of a proclamation issued by the Governor on July 9, 1908, no cattle can be entered for breeding or dairy purposes except upon satisfactory evidence furnished to the State Veterinarian that they are free from tuberculosis.

The federal rules and regulations forbid the interstate ship-

ment or driving of animals known to be tuberculous as shown by physical examination, tuberculin test, or any other method, and a person making such shipment or driving such animals makes himself liable to fine and imprisonment. A permit can be obtained to ship such animals as "suspects," subject to the rules and regulations of the Bureau of Animal Industry.

Additional Steps for Eliminating the Disease. The steps for the control of tuberculosis must proceed from both private and public sources. The individual ought to do all that he can for his own safety and for economic reasons. Diseased animals cannot make as good returns as those which are in health. Furthermore, the custom of paying on foot for animals at the slaughtering centers will probably change to payment after slaughtering. Heretofore the stock raiser who has sent his stock to market has received payment on the basis that they were healthy and the losses from condemnation have been met by the packer by prorating the price paid upon all sellers. Such being the case, the losses sustained on the diseased stock sold by A has been shared in the lessened price paid for the healthy stock to B and C. The packer can not afford the loss and it is an injustice to B and C to be made to do so. Fairness to all demands that A should bear the loss for his preventable disease. The sooner such a system of payment goes into effect, the sooner there will be a recognition of the losses caused by the disease and means taken to prevent it.

The tuberculin test should be compulsory in the exchange of all pure blooded stock, as such animals are expected to be kept for years for breeding purposes.

The public has a right to demand that its dairy and meat products should be wholesome and to that end that they should be free from tuberculosis. Cities and towns should demand that the cattle furnishing the milk supply should be tuberculin tested and, to the end that the work should be done properly it should be done under municipal control and expense. The cost of testing is not large, when done under business conditions. One veterinarian and a helper can test on an average of fifty animals per day, which, if continued for six days in the week, will soon clean up all the herds about a small sized city or town.

Accepting as an established fact that the disease may be contracted by the human from meat or milk, then the State should use all reasonable measures in preventing the disease from this source. The logical course would be to prevent disease before becoming committed to the policy of treating the sick.

In public exhibitions of live stock, as county or State fairs, no award should be given to an animal which can not show a clean bill of health.

Any measure which the State may adopt in the future for the control or eradication of tuberculosis should have the effect of permanency. Testing scattered herds has an educational value, but it does not insure that the work will not need to be repeated. By testing all the herds in a district in one year, and properly separating the healthy and reacting cattle, less than one-third of the herds would need to be tested on the succeeding year, less than one-fourth the herds on the third year, and by the fifth year the disease would be stamped out. The large expense in testing and condemnation would be borne the first year. It is believed that with such a scheme of work the disease might be stamped out, and at a cost considerably less than that of the present annual losses.

THE STATE LIVE STOCK SANITARY LAW.

AN ACT entitled an act to establish the office of State Veterinarian of Indiana, to provide for the appointment of the State Veterinarian by the Governor, and to provide for the control and suppression of dangerous, contagious and infectious diseases among domestic animals, making an appropriation for expenses of the same, and for the repeal of all laws or parts of laws conflicting herewith.

[S. 18. Approved March 6, 1901.]

Section 1. Be it enacted by the General Assembly of the State of Indiana, That an office is hereby established, to be known as the State Veterinarian of Indiana. The office of State Veterinarian of Indiana shall be filled by appointment by the Governor; the person so appointed shall be a competent and qualified veterinarian of large experience, and shall be a graduate of a reputable veterinary college in the United States, Canada or Europe. The term of office of the State Veterinarian shall be four years, but he may be removed for cause.

Sec. 2. That it shall be the duty of the State Veterinarian to protect the health of the domestic animals of the State, and to determine the most efficient and practical means for the prevention, suppression, control, and eradication of dangerous, contagious and infectious diseases, and to investigate the cause, nature, means of prevention and treatment of such diseases as he may deem advisable, and for these purposes he is hereby authorized and empowered to establish, maintain, enforce and regulate such quarantine and other measures relating to the movements and care of animals and their products, the disinfection of suspected localities and articles, and the destruction of such animals and property as he may deem necessary, and to adopt from time to time all such regulations as may be necessary and proper for the carrying out of the purposes of this act: Provided, however, That in the case of any slowly contagious disease, only suspected or diseased animals shall be quarantined.

Sec. 3. That when it shall be deemed necessary to kill any animal or animals, or to destroy any property to prevent further spread of disease, the State Veterinarian or his agent may adjust the claim with the owner or his agent: Provided, That the amount to be paid is less than twenty-five dollars: if the claim exceed twenty-five dollars, or an agreement can not be made with the owner or claimant for the amount thereof, three appraisers, who

shall be freeholders in the county, shall be appointed, one by the State Veterinarian or his agent, one by the owner or claimant, and a third by the two appointed, as aforesaid, who shall under oath or affirmation appraise the animal, animals or property, taking into consideration their or its actual value at the time of appraisal, and such appraisement shall be paid in the same manner as other expenses under this act are provided for: Provided, That under such appraisement, not more than twenty-five dollars shall be paid for any infected animal: And provided further, The right to indemnity does not exist and the payment of such must not be made in the following cases:

For animals belonging to the United States;

For animals belonging to the State;

For animals brought into the State contrary to the rules and regulations of the State Veterinarian;

For animals found to be diseased, or that are destroyed because they have been exposed to disease before or at the time of their arrival in the State;

For an animal which was previously affected by any other disease, which from its nature and development was incurable and necessarily fatal;

For an animal which the owner knowingly or wittingly purchased affected with disease, or from a place where contagious disease was known to exist.

Sec. 4. That all sheep consigned to or passing through stock-yards shall be dipped before leaving, if intended for any other purposes than immediate slaughter in the State, the time of dipping, the manner of dipping, and kind of dip used to be subject to the approval of the State Veterinarian: Provided, That in the winter and at such times as the dipping of sheep would be hazardous to their health, the sheep may be withdrawn, upon permit from the State Veterinarian, which permit shall be issued upon the written agreement of the owner that the sheep will remain in his possession, and that he will dip at such future time and in such manner as the State Veterinarian may direct. That all sheep found affected with scabies shall be dipped at such time and in such manner and with such dip as the State Veterinarian shall direct, and at the expense of the owner.

Sec. 5. That the State Veterinarian or his authorized agent shall at all times have the right to enter any premises, farms, fields, pens, abattoirs, slaughter-houses, buildings, cars, or vessels, where any domestic animals are at the time quartered, or wher-

ever the carcass of any one may be, for the purpose of examining it in any way that may be deemed necessary to determine whether they are or were the subjects of any contagious or infectious disease.

Sec. 6. That the State Veterinarian may accept in behalf of the State, the rules and regulations prepared and adopted by the Department of Agriculture of the United States, for the suppression of any contagious diseases among domestic animals, and shall co-operate with the authorities of the United States in the enforcement of such rules and regulations.

Sec. 7. That the inspectors of the Bureau of Animal Industry shall have the same right of inspection, quarantine and condemnation of animals affected with any contagious or infectious disease, or suspected to be so affected, or that may have been exposed to any such disease, and for such purposes they may enter upon any ground or premises, they may call upon the Sheriffs, Constables and other peace officers to assist them in the discharge of their duties, and such Sheriffs, Constables or peace officers shall assist such inspectors when so requested, and such inspectors shall have the same power and protection as peace officers, when engaged in the discharge of their duties: Provided, That this State shall not be liable for any damages or expenses caused or made by such inspectors.

Sec. 8. That whenever the Governor has good reasons to believe that any disease has become epidemic in another State or Territory, and that the importation of animals from such State or Territory would be prejudicial to the health of the domestic animals of this State, he must, by proclamation, designate such locality or localities, and prohibit the importation therefrom of any live stock of the kind diseased, except under such rules and regulations as the State Veterinarian shall prescribe.

Sec. 9. That any person knowing or suspecting a dangerous, contagious or infectious disease to exist among live stock shall report the same to the local health officer, who shall, within twenty-four hours, report the same to the State Veterinarian. The State Veterinarian or his agent shall visit the locality and make an examination of the suspected stock and prescribe and enforce such rules and regulations as may be necessary: Provided, That an owner of an animal or animals affected with a dangerous or contagious disease shall report the same within forty-eight hours after knowing such to exist.

Sec. 10. The State Veterinarian shall, as far as possible, in-

investigate such diseases of animals as are communicable to man and such conditions of dairies as the State Board of Health may request.

Sec. 11. Any person or persons, any company or corporations, wilfully violating any of the provisions of this act, or any regulation or order of the State Veterinarian, or agent appointed by him, shall be deemed guilty of misdemeanor and shall, upon conviction, be punished by a fine not exceeding one hundred dollars, or by imprisonment not exceeding thirty days, or both, at the direction of the court.

Sec. 12. That the State Veterinarian is hereby empowered to appoint and employ such assistants or agents and to purchase supplies and materials as may be necessary in carrying out the provisions of this act: Provided, That the sum expended for supplies and materials shall not exceed two hundred dollars in any one year. That the State Veterinarian or his duly appointed agents are empowered to administer oaths or affirmations, that they may make such examinations into the conditions of the live stock of the State in relation to contagious and infectious diseases, including milk supplies of cities, towns and villages, as may seem necessary, and to take proper measures to protect such milk supplies from contamination. The decision of the State Veterinarian in all matters pertaining to diseases of domestic animals and his orders as to their disposition, shall be final. He may call upon any peace officer for assistance in the discharge of his duties, and such peace officer shall give assistance.

Sec. 13. That the State Veterinarian shall, from time to time, publish the rules and regulations pertaining to the control and suppression of dangerous, contagious and infectious diseases of domestic animals, and such regulations shall have the force and effect of laws of the State of Indiana. He shall make an annual report to the Governor of all work done and a statement of expenditures.

Sec. 14. That the Governor, Auditor of State and Treasurer of State shall constitute a committee to determine the salary of the State Veterinarian and to audit his accounts, and upon the certification by the Governor to the Auditor of State the amount due the State Veterinarian and assistants for salary and expenses, the Auditor shall draw his warrant upon the Treasurer for said amount in favor of the State Veterinarian and assistants, respectively, payable out of the funds hereinafter appropriated; and upon further certification by the Governor to the Auditor of State

of the amount due any person for an animal or animals condemned or property destroyed, the Auditor shall draw his warrant upon the Treasurer for the amount so certified, payable out of the funds hereinafter appropriated: Provided, That said committee shall not receive additional compensation for said work: And further provided, That the salary of the State Veterinarian shall not exceed twelve hundred dollars and necessary traveling expenses in one year, and that not more than eight hundred dollars shall be allowed for assistants.

Sec. 15. That the sum of three thousand dollars is hereby appropriated annually for carrying out the provisions of this act.

Sec. 16. That an act entitled "An act to provide for a Live Stock Sanitary Commission and a State Veterinarian, and to prescribe their powers and duties, and to prevent and suppress contagious and infectious diseases among the live stock of the State, and to declare an emergency," approved March 9, 1889, and all other laws and parts of laws in conflict therewith be and the same are hereby repealed.

PROCLAMATION BY THE GOVERNOR.

STATE OF INDIANA, EXECUTIVE DEPARTMENT.

Whereas, Tuberculosis among cattle in the several States of the American Union is becoming prevalent, the percentage in some cases being quite high, and no area being entirely free from the infection; and

Whereas, Said disease is increasing, particularly among dairy cattle; and

Whereas, Several of the States require that dairy and breeding cattle be free from tuberculosis when shipped into their territory for dairy or breeding purposes; and

Whereas, Dairy and breeding cattle affected by said disease are being shipped into the State of Indiana, and in some cases where persons shipping them knew they were so affected; now,

Therefore, In order to prevent the spread of such disease, I, J. Frank Hanly, Governor of the State of Indiana, by virtue of the authority vested in me by the laws of said State, do hereby require and proclaim that all cattle brought into the State of Indiana for either dairy or breeding purposes shall be accompanied by a certificate from the authorities of the State from which they are shipped, showing their freedom from tuberculosis and other

contagious diseases; the terms of said certificate to be such as shall be required and prescribed by the State Veterinarian of the State of Indiana.

In Witness Whereof, I have hereunto set my hand and caused to be affixed the Great Seal of the State of Indiana, at the Capitol, in the city of Indianapolis; this 9th day of July, in the year of our Lord, 1908, in the year of the independence of the United States the 133rd, and in the year of the admission of the State of Indiana the 92nd.

J. FRANK HANLY,
Governor.

FRED SIMS,
Secretary of State.

RULES AND REGULATIONS.

Reports of Diseases. The presence of dangerous, contagious or infectious diseases should be reported to the local health officer or directly to the State Veterinarian.

The report should state clearly the name of the owner or person having the stock in charge, give the number and kind of animals affected and where they are located.

The report should give the diagnosis, if one has been made, or if a qualified veterinarian should reside in the locality it is expected that he be called to make a diagnosis before calling upon the State for assistance.

No attention will be paid to anonymous reports.

The service of the State Veterinarian is intended to be applied where police measures can be effective in the control of dangerous, contagious and infectious diseases. This class includes those spread by close contact or by coming in proximity with infected premises, and includes tuberculosis, glanders, infectious lymphangitis, rabies, pox, ano-vulvitis, contagious abortion and southern cattle fever, scabies in sheep and mange in other animals.

There are other contagious and infectious diseases over which we have little control in the spread of the organisms or due to organisms which remain on certain lands, and this group includes hog cholera, swine plague, hemorrhagic septicæmia, influenza, actinomycosis, blackleg, the verminous diseases of sheep, as twisted stomach worm and the nodular disease, the lung worm of calves, and the verminous infection of the horse commonly called swamp fever. The losses from infectious diseases of this group may be heavy and advice may be offered, but the treatment and handling

must be carried out by the owner. Animals affected with any of these diseases may be quarantined if in the opinion of the State Veterinarian the public interest will be conserved.

Compensation. As the owners of horses which are condemned for glanders, and of cattle condemned for tuberculosis, and animals lost from hydrophobia or Texas fever nearly always demand damages, the following interpretation of the act by the Attorney-General is given for their benefit:

“Indianapolis, Ind., May 21, 1901.

“Dr. A. W. Bitting, Lafayette, Ind.:

“Dear Sir—I am in receipt of your favor of the 5th inst., making the inquiry:

“What is a proper basis for appraisal of animals. (1) When condemned as affected with contagious, or infectious and incurable disease? (2) When condemned as affected with contagious or infectious disease that may be curable, but in which case it is deemed expedient to slaughter for the better protection of other stock?

“Section 3 of the veterinary law provides a basis for payment of destroyed property. It leaves it in the hands of yourself or agents to adjust the claims with the owner or his agent. It limits the amount to be adjusted by you to \$25 for each animal. If the claim is for more than that amount, then three appraisers shall be named. You and these appraisers are to take into consideration in the respective cases the actual value at the time of appraisal—not what it was worth in the past, nor what was paid for it, but what it was actually worth at the time the animal was appraised.

“In no event shall more than \$25 be paid for any animal. Then follows the classes of animals for which no payment is to be made:

“(1) Animals belonging to the United States.

“(2) Animals belonging to the State.

“(3) Animals brought into the State contrary to the rules and regulations of the State Veterinarian.

“(4) Animals found to be diseased, or that were destroyed because they have been exposed to disease, before or at the time of their arrival in the State.

“(5) An animal previously affected with another disease, which from its nature is incurable and necessarily fatal.

“(6) Any animal the owner whereof knowingly or wittingly

purchased affected with disease, or from a place where contagious disease was known to exist.

"This section is exceedingly specific and plain. The first class of animals would be worth no more than the carcass, which would include the hide and the skinned body for fertilizer purposes. In the second class, if the animal is affected with a disease that may be cured, that must be taken into consideration, and the price fixed on the basis of a presumption of recovering health.

"Very truly yours,

"W. L. TAYLOR."

Long experience has taught that glanders, anthrax, rabies and southern cattle fever are generally fatal and not to be regarded as other than incurable diseases. They would have no value other than their carcasses as fertilizer and therefore no compensation is allowed other than a nominal sum to cover cost of disposal for such as are killed.

In case the owner and State Veterinarian can not agree upon the amount of compensation or the appraisers see fit to award an amount in excess of that which is proper, the State Veterinarian may use his discretion and place the animal in permanent quarantine.

Quarantine. Quarantine will be enforced whenever such measures may be necessary for the control of the spread of any contagious or infectious disease. The length of time in each case shall be determined by the State Veterinarian.

A notice of quarantine shall be given in writing and the release made in the same manner.

Disinfection. Condemned animals shall be promptly burned, buried, or rendered to the satisfaction of the State Veterinarian. In the case of burial the use of unslacked lime or crystals of copper sulphate may be required to be used in order to render the carcass safe from infecting the ground.

The premises and infected paraphernalia shall be disinfected in such manner as will insure safety to other stock against infection. In the case of some diseases such as scab or mange, the exclusion of animals from the yards or pens for a time may be sufficient. Stables, sheds and pens should have all litter removed and spread upon a field, to which no stock will have access or should be burned. In the case of blackleg, the litter should always be burned. In stables, the walls, ceilings, mangers, etc., should be disinfected with live steam if it is easily available. A

thresher engine in which twenty-five to thirty pounds of steam may be carried and a hose to run inside the stable makes an excellent outfit. The steam can be directed upon all parts quickly and easily and with the assurance of doing thorough work.

All parts of a building, shed or pen may be whitewashed, either with a pump or brush, with good results. The whitewash should be fresh and strong. In the case of a good barn in which it is not desirable to use whitewash, a coat of turpentine will be found to be effective. Strong carbolic acid or cresol solutions may be used for the same purpose and are preferred by some, especially for fair pens and railroad yards and chutes. In general it is preferable to use the whitewash or turpentine because of not being poisonous.

Gas in the form of fumes from burning sulphur is used for closed buildings. This is easily generated by placing sulphur on hot coals in some metal container. The dry gas is not effective, however, but does become so in the presence of steam and therefore a vessel of steaming water ought to be kept alongside the sulphur pot.

Formaldehyde is not effective unless generated in considerable quantities and retained in a tight room. It is therefore not to be generally recommended for disinfecting stables.

The floor should be sprinkled with fresh lime or chloride of lime. All animals should be excluded until the disinfection is complete and any poisonous substance removed.

Blankets and robes may be disinfected with boiling water or they may be placed in a box or closet with the harness and be disinfected with formaldehyde.

GENERAL LAWS RELATING TO DISEASED STOCK.

[Acts of the Legislature, 1905.]

Sec. 589. Whoever knowingly permits any horse, mare or gelding affected with the glanders to be taken from his premises or to run at large, shall, on conviction, be fined not less than five dollars nor more than one hundred dollars.

Sec. 590. Any person, being the owner of sheep, or having the same in charge, who shall turn or suffer any sheep having any contagious disease, knowing the same to be diseased, to run at large upon any common, highway or uninclosed ground, or who shall sell any such sheep, knowing the same to be diseased, without fully disclosing the fact to the purchaser, shall, on con-

viction, be fined not less than two dollars nor more than twenty-five dollars for each such diseased sheep.

Sec. 591. Every person shall so restrain his diseased or distempered cattle, or such as are under his care, that they may not go at large off his own premises or the land to which they belong; and no person shall drive any diseased or distempered cattle affected with what is known as Texas or Spanish fever, or any other infectious disease, into or through this State, or from one place therein to another, unless it be to remove them from one piece of ground to another of the same owner, without passing over a public highway; and no railroad company or owner of a steamboat, or any other company or person, shall bring into this State, except for the purpose of being carried through into another State on a continuous journey, or transport from one part thereof to another any Texas, Mexican, Cherokee or Indian cattle affected as above.

Sec. 592. Any person, railroad company or the owner of any steamboat who shall offend against or violate any of the provisions of the next preceding section shall be liable for all damages sustained on account of such Texas or Spanish fever, or other infectious disease, being communicated from any such diseased cattle to any other cattle in the neighborhood or along the line of such transportation, or removal of such diseased cattle into or through this State, or any part thereof to another; and the existence or presence of such Texas or Spanish fever, or other contagious or infectious disease, among the native cattle of this State, on the same range or in the vicinity of any such Texas, Mexican, Cherokee, Indian or other cattle, or along the line or route over which they were removed or transported, shall be prima facie evidence that the same were affected with such disease at the time of being removed or transported, and communicated it to such native cattle so affected therewith.

Sec. 592½. Whoever hauls, moves or transports upon any public highway the carcass, or any part thereof, of any hog that shall have come to its death from disease; or whoever shall so haul, move or transport upon any such highway any hog while such animal is afflicted with disease shall, on conviction, be fined not less than ten dollars nor more than five hundred dollars, or may be imprisoned in the county jail not exceeding six months, or may be punished by both fine and imprisonment. The hauling, moving or transporting of any such hog, carcass or part thereof,

to, or by the owner or employe of, any rendering or desiccating establishment, shall be *prima facie* a violation of this section: Provided, however, That the provisions of this section shall not apply to the streets, alleys or public highways of any incorporated town or city.

Sec. 546. Whoever kills, for the purpose of sale, any sick, diseased or injured animal, or sells or has in his possession with the intent to sell, the meat of any such sick or diseased or injured animal, shall, on conviction, be fined not less than fifty dollars nor more than five hundred dollars, to which may be added imprisonment in the county jail not more than six months.

Sec. 3, Chapter 104, Acts 1907. That no person either by his servant or agent, or as the servant or agent of another person, shall sell, exchange or deliver, or have in his custody or possession with intent to sell, exchange or deliver, expose or offer for sale or exchange, adulterated milk or milk to which water or any foreign substance has been added, or milk produced from cows which have been fed on the refuse of distilleries, or from sick or diseased cows, or as pure, milk from which the cream or any part thereof has been removed, or milk which is not of standard quality, or milk collected and kept or handled under conditions which are not cleanly and sanitary, or milk containing less than eight and one-half per cent. of milk solids exclusive of fat, and three and twenty-five-hundredths per cent. of milk fat, or milk which contains any added color or preservative: Provided, however, "Refuse of distilleries" shall not be construed to mean or apply to dried distillers' grains in sound condition.

Sec. 10. That, except as elsewhere provided in this act, any person, persons, firm or corporation violating any of the provisions of this act, shall, upon conviction for the first offense, be punished by a fine of not less than \$10.00 nor more than \$30.00; for the second offense, by a fine of not less than \$25.00 nor more than \$100.00: and for the third and subsequent offenses, by a fine of \$100.00 and imprisonment in the jail for not less than thirty nor more than ninety days.

Chapter 73, Acts 1907. Sale or Exchange of Diseased Animals.

Section 1. Be it enacted by the general assembly of the State of Indiana. Whoever shall offer for sale, or exchange for anything of value, any horse or mule, knowing the same to be affected with glanders, or any other infectious or contagious disease, or knowing the same to be afflicted with the "heaves," or to be

“broken winded,” or to be what is popularly known as a “roarer” or a “cribber,” and shall conceal the existence of such disease from the person to whom he is offering such animal for sale, or with whom he is attempting to effect an exchange thereof, or who shall employ any trick, artifice, drug, or any device of any character whatsoever to conceal the existence of such disease or defect, and shall thereby effect the sale or exchange of such animal to any person who is ignorant of the existence of such disease or defect, and by such sale or exchange obtain any thing of value, shall on conviction thereof be fined in any sum not exceeding five hundred (\$500.00) dollars, to which may be added imprisonment in the county jail or workhouse for a period not exceeding six months.

FEDERAL REGULATIONS IN MEAT INSPECTION.

Sec. 13, Paragraph 1. The following principles are declared for guidance in passing on carcasses affected with tuberculosis:

Principle A. The fundamental thought is that meat should not be used for food if it contains tubercle bacilli, if there is a reasonable possibility that it may contain tubercle bacilli, or if it is impregnated with toxic substances of tuberculous or associated septic infections.

Principle B. On the other hand, if the lesions are localized and not numerous, if there is no evidence of distribution of tubercle bacilli through the blood, or by other means, to the muscles or to parts that may be eaten with the muscles, and if the animal is well nourished and in good condition, there is no proof, or even reason to suspect, that the flesh is unwholesome.

Principle C. Evidences of generalized tuberculosis are to be sought in such distribution and number of tuberculous lesions as can be explained only upon the supposition of the entrance of tubercle bacilli in considerable number into the systemic circulation. Significance of such generalization are the presence of numerous uniformly distributed tubercles throughout both lungs, also tubercles in the spleen, kidneys, bones, joints and sexual glands, and in the lymphatic glands connected with these organs and parts, or in the splenic, renal, prescapular, popliteal and inguinal glands, when several of these organs and parts are coincidentally affected.

Principle D. By localized tuberculosis is understood tubercu-

losis limited to a single or several parts or organs of the body without evidence of recent invasion of numerous bacilli into the systemic circulation.

Paragraph 2. The following rules shall govern the disposal of tuberculous meat:

Rule A. The entire carcass shall be condemned—

(A) When it was observed before the animal was killed that it was suffering with fever.

(B) When there is tuberculous or other cachexia, as shown by anemia and emaciation.

(C) When the lesions of tuberculosis are generalized, as shown by their presence not only at the usual seats of primary infection, but also in parts of the carcass or the organs that may be reached by the bacilli of tuberculosis only when they are carried in the systemic circulation. Tuberculous lesions in any two of the following mentioned organs are to be accepted as evidence of generalization when they occur in addition to local tuberculous lesions in the digestive or respiratory tracts, including the lymphatic glands connected therewith: Spleen, kidney, udder, ovary, testicle, adrenal glands, brain, or spinal cord or their membranes. Numerous uniformly distributed tubercles throughout both lungs also afford evidence of generalization.

(D) When the lesions of tuberculosis are found in the muscles or intermuscular tissue or bones or joints, or in the body lymphatic glands as a result of draining the muscles, bones or joints.

(E) When the lesions are extensive in one or both body cavities.

(F) When the lesions are multiple, acute and actively progressive. Evidence of active progress consists in signs of acute inflammation about the lesions, or liquefaction necrosis, or the presence of young tubercles.

Rule B. An organ or a part of a carcass shall be condemned—

(A) When it contains lesions of tuberculosis.

(B) When the lesion is immediately adjacent to the flesh, as in the case of tuberculosis of the parietal pleura or peritoneum, not only the membrane or part affected, but also the adjacent thoracic or abdominal wall is to be condemned.

(C) When it has been contaminated by tuberculous material through contact with the floor, a soiled knife or otherwise.

(D) All heads showing lesions of tuberculosis shall be condemned.

(E) An organ shall be condemned when the corresponding lymphatic gland is tuberculous.

Rule C. The carcass, if the tuberculous lesions are limited to a single or several parts or organs of the body (except as noted in A), without evidence of recent invasion of tubercle bacilli into the systemic circulation, shall be passed after the parts containing the localized lesions are removed and condemned in accordance with Rule B.

Rule D. Carcasses which reveal lesions more numerous than those described for carcasses to be passed (Rule C), but not so severe as the lesions described for carcasses to be condemned (Rule A), may be rendered into lard or tallow if the distribution of the lesions is such that all parts containing tuberculous lesions can be removed. Such carcasses shall be cooked by steam at a temperature not lower than 220 degrees Fahrenheit for not less than four hours.

NOTICE REGARDING THE INTERSTATE MOVEMENT OF CATTLE AND SWINE WHICH ARE AFFECTED WITH TUBERCULOSIS.

U. S. DEPARTMENT OF AGRICULTURE,

OFFICE OF THE SECRETARY,

Washington, D. C., November 6, 1907.

The attention of managers and agents of railroads and transportation companies, of stockmen, and others interested in the interstate movement of cattle and swine, is directed to the provisions of section 6 of the act of Congress approved May 29, 1884, entitled "An act for the establishment of a Bureau of Animal Industry," etc. This section reads in part as follows:

Sec. 6. That no railroad company within the United States, or the owners or masters of any steam or sailing or other vessel or boat, shall receive for transportation or transport, from one State or Territory to another, or from any State into the District of Columbia, or from the District into any State, any live stock affected with any contagious, infectious or communicable disease, and especially the disease known as pleuro-pneumonia; nor shall any person, company or corporation deliver for such transportation to any railroad company, or master or owner of any boat or vessel, any live stock, knowing them to be affected with any con-

tagious, infectious or communicable disease; nor shall any person, company, or corporation drive on foot or transport in private conveyance from one State or Territory to another, or from any State into the District of Columbia, or from the District into any State, any live stock, knowing them to be affected with any contagious, infectious, or communicable disease, and especially the disease known as pleuro-pneumonia. (23 Stat. L. 32.)

Under this section it is a misdemeanor, punishable by fine and imprisonment, for any person or corporation to deliver for transportation, receive for transportation, transport, drive on foot, or otherwise remove from one State or Territory or District of Columbia into another State or Territory or the District of Columbia any cattle or swine which are affected with tuberculosis, as disclosed by a physical examination or by the tuberculin test, or by any other means.

In cases where evidence is furnished the Department that any person, firm, or corporation has transported, driven on foot, or otherwise removed from one State or Territory or the District of Columbia, into another State or Territory or the District of Columbia any cattle or swine which are affected with tuberculosis, knowing from a physical examination or from the tuberculin test, or by any other means, that such animals are affected with tuberculosis, vigorous prosecution will be had in the Federal courts under section 6 of the act of May 28, 1884, *supra*.

JAMES WILSON,
Secretary of Agriculture.

FEDERAL REGULATIONS.

The following Federal Rules and Regulations have been accepted and are effective in this State:

GENERAL REGULATIONS.

[Effective April 15, 1907.]

Regulation 1. Wherever in these regulations, or in the rules based thereon, the word "interstate" is used, it shall be construed to mean "between one State or Territory or the District of Columbia and another State or Territory or the District of Columbia."

Regulation 2. When the Secretary of Agriculture shall determine the fact that cattle or other live stock in a State or Territory or the District of Columbia are affected with any contagious, infectious, or communicable disease notice will be given of that fact. A rule will be issued placing in quarantine all or a portion of the State or Territory or the District of Columbia in which the disease exists, and this rule will either absolutely forbid the interstate movement of live stock from the quarantined area or will indicate the regulations under which interstate movements may be made.

Regulation 3. Before offering cattle or other live stock for interstate transportation, or so transporting them, or introducing them into any public stock yards or upon routes of traffic for interstate transportation, all persons or corporations are required to exercise reasonable diligence to ascertain that such animals are not affected with any contagious or infectious disease, and have not been exposed to the contagion or infection of disease by contact with other animals so diseased or by location in or upon pens, premises, cars, or other vehicles that have contained diseased animals.

Regulation 4. Premises, cars, boats, and other vehicles that have contained diseased or exposed cattle or other live stock shall not be used in the interstate transportation of healthy animals until the said premises, cars, boats, and other vehicles shall have been cleaned and disinfected as hereinafter provided. If the facilities for cleaning and disinfecting cars can not be provided at the point where the diseased or exposed cattle or other live stock are unloaded therefrom, the transportation company shall seal and forward the infectious cars to a point to be agreed upon between an agent of the company and a representative of the Bureau of

Animal Industry, and shall there clean and disinfect the said cars in the presence of an employe of the Bureau of Animal Industry.

Regulation 5. Cars, boats, and other vehicles for use in the interstate transportation of healthy and nonexposed cattle or other live stock within or from a quarantined area shall first be cleaned and disinfected as hereinafter provided, unless it shall be shown to the satisfaction of the inspector of the Bureau of Animal Industry either that said cars or other vehicles have been cleaned and disinfected under Regulation 4, and have not carried or contained diseased or exposed animals since that cleaning and disinfection, or that the cars have never been used for the transportation of diseased or exposed animals.

Regulation 6. Public stock yards, feeding stations, and approaches, chutes, alleys, and pens thereof which have contained diseased or exposed animals shall, before healthy or nonexposed animals for interstate transportation are placed therein, be cleaned and disinfected as hereinafter provided. Failure to clean and disinfect said places will subject them to quarantine.

Regulation 7. When deemed necessary, interstate shipments of live stock will be stopped in transit for inspection and disposition, and all persons and corporations having control of the transportation of such live stock shall cease the carriage or transit thereof upon receipt of an order from an inspector of the Bureau of Animal Industry, and shall submit the shipment to inspection.

Regulation 8. When in order to prevent the spread of a disease it becomes necessary to slaughter any diseased or exposed live stock and the purchase of such live stock by the United States is authorized by law and an appropriation is available therefor, the value of the live stock shall be ascertained and compensation made therefor either by agreement with the owner or by appraisement in the manner provided by the law of the State or Territory wherein the owner of the live stock has his legal residence.

Regulation 9. Where inspection and certification are required by the regulations of the Secretary of Agriculture, inspection and certification by an inspector of the Bureau of Animal Industry are meant, and such inspection and certification will be furnished without the payment of fees or charges of any nature.

Regulation 10. Interstate shipments of live stock of any quarantined area that are not accompanied by a certificate of an

inspector of the Bureau of Animal Industry, showing freedom from disease or from exposure thereto, shall not be diverted en route to feed lots or to other States for feeding, stocking, or breeding purposes unless first inspected and certified by an inspector of the Bureau of Animal Industry.

REGULATIONS TO PREVENT THE SPREAD OF SPLENETIC FEVER OF CATTLE.

[Effective April 15, 1907.]

Regulation 11. Whenever any State or Territory located within an area quarantined by the Secretary of Agriculture for splenic, southern, or Texas fever shall duly establish a State or Territorial quarantined area different from the quarantined area established by the Secretary of Agriculture, and shall obtain the legislation requisite to enforce said State or Territorial quarantine strictly and completely within the boundaries of said State or Territory, the Secretary of Agriculture will, if the said State or Territorial quarantine be satisfactory, adopt by a rule said State or Territorial quarantine, and the State or Territorial quarantine thus adopted shall define the limits of that portion of the Federal quarantined area, which shall thereafter be known as the modified quarantined area. The expiration of the time fixed in the rule, the revocation of the rule, or a failure upon the part of the State officers to enforce the adopted quarantine shall restore the quarantined area to the territory quarantined by the Secretary of Agriculture before the adoption of the State or Territorial quarantine.

Regulation 12. Whenever any State or Territory under authority of law shall establish a State or Territorial quarantine for splenic fever which differs from the quarantine established by the Secretary of Agriculture for the said disease, and shall desire a modification of the area quarantined by the Secretary of Agriculture, the proper officer of the said State or Territory shall forward to the Secretary of Agriculture a true map or description of such State or Territorial quarantine and a duly authenticated copy of the laws and regulations relating to the establishment and enforcement of the quarantine.

Regulation 13. From the 1st day of February to the 31st day of October, inclusive, of each year no cattle shall be transported or driven or allowed to drift from the modified quarantined area in any State or Territory or the District of Columbia to any point in any other State or Territory or the District of Columbia not

included in the modified quarantined area, except as hereinafter provided. During the months of January, November, and December of each year interstate movements of cattle from the modified quarantined area may be made without restrictions other than those imposed by State or Territorial officers at point of destination.

Regulation 14. Interstate shipments of cattle from the modified quarantined area may be made at any time, by rail or boat, to a recognized slaughtering center for immediate slaughter, but cattle shall not be trailed or driven or hauled in private conveyance from the modified quarantined area in any State or Territory or the District of Columbia to any point in any other State or Territory or the District of Columbia not included in the modified quarantined area. When transported for immediate slaughter, as herein provided, the following rules regarding their movement shall be observed:

(a) Cattle of the modified quarantined area which in course of interstate transportation therefrom are unloaded at a point not within the modified quarantined area to be fed or watered, or for other purposes, shall be placed in pens or yards reserved for cattle of the modified quarantined area. Such pens and yards shall be separated from the pens and yards used for cattle that are not of the modified quarantined area as hereinafter provided, and shall be marked with a conspicuous sign bearing the words "Quarantine Pens," or "Quarantine Yards," in letters not less than 10 inches in height. If cattle not of the modified quarantined area shall be placed in the said pens or yards, such cattle shall thereafter be treated in all respects as if they were actually of the modified quarantined area. At points of destination, chutes and alleyways and pens, maintained as hereinafter provided, and marked with a sign as hereinbefore specified, shall be set apart to receive cattle of the modified quarantined area, and no other cattle shall be admitted to said chutes, pens and alleyways. The regulations relating to the movement of cattle of the modified quarantined area as prescribed by the proper State officers at destination shall be carefully observed.

(b) The cars or boats which have carried cattle of the modified quarantined area shall be cleaned and disinfected as hereinafter provided as soon as possible after unloading and before the said cars or boats are again used in the interstate transportation of live stock or merchandise.

(c) Where cattle of the modified quarantined area in course

of interstate transportation and cattle not of the modified quarantined area are yarded in adjacent pens, there shall be a space not less than 10 feet wide between the pens, which space shall not be occupied by cattle, and there shall be on each side of this space a tight board fence not less than 5 feet high: Provided, That the pens used for cattle of the modified quarantined area shall be inclosed by a tight board fence not less than 6 feet high on the inside.

(d) The proper officers of the transportation companies shall securely affix to both sides of all cars carrying interstate shipments of cattle from the modified quarantined area, except as hereinafter provided, durable placards not less than $5\frac{1}{2}$ by 7 inches in size, on which shall be printed with permanent black ink and in bold-face letters not less than $1\frac{1}{2}$ inches in height the words "Southern Cattle." These placards shall also show the name of the place from which the shipment was made, the date of the shipment (which must correspond with the date of the waybills and other papers), the name of the transportation company, and the name of the place of destination. Each of the waybills, conductors' manifests, memoranda, and bills of lading pertaining to such shipments by cars or boats shall have the words "Southern Cattle" plainly written or stamped upon its face. Whenever such shipments are transferred to another transportation company or into other cars or into other boats, or are rebilled or reconsigned from any point outside of the modified quarantined area to a point other than the original destination, the cars into which said cattle are transferred and the new waybills, conductors' manifests, memoranda, and bills of lading covering said shipments by cars or boats shall be marked as herein specified for cars carrying said cattle from the modified quarantined area, and for the billing, etc., covering the same. If for any reason the placards required by this regulation are removed from the car or are destroyed or rendered illegible they shall be immediately replaced by the transportation company or its agents, the intention being that legible placards shall be maintained on the car from the time such shipments leave the modified quarantined area until they arrive at destination.

(e) No car or boat containing an interstate shipment of cattle of the modified quarantined area shall receive on board cattle which are not of the modified quarantined area. Interstate shipments of cattle of said modified quarantined area shall not be made to points outside of said modified quarantined area where

proper facilities have not been provided for transferring the said cattle from the cars or landing to the stock yards and slaughter-houses without passing them over public highways, unless permission for such passing is first had and obtained from the proper authorities at point of destination.

(f) The cars and boats used for the interstate transportation of cattle of the modified quarantined area, and also the chutes, alleyways, and pens not reserved for the exclusive use of such cattle used en route and at points of destination, shall be disinfected in the following manner: Remove all litter and manure. This litter and manure may be disinfected by mixing it with lime or saturating it with a 5 per cent. solution of pure carbolic acid; or, if not disinfected, it shall be stored where no cattle can come in contact with it during the period from February 1 to October 31, inclusive, of each year. Wash the cars and the watering and feeding troughs with water until clean. Saturate the entire surface of the cars, including the inner surface of the car doors, and the fencing, troughs, chutes, and floors of the pens, with a mixture made of $1\frac{1}{2}$ pounds of lime and one-fourth pound of pure carbolic acid to each gallon of water, or with a solution made by dissolving 4 ounces of chloride of lime to each gallon of water.

(g) Cars which have carried cattle within the modified quarantined area of any State or Territory or the District of Columbia shall be cleaned and disinfected before being taken to any point in another State or Territory or the District of Columbia not in the modified quarantined area. This provision shall not apply to cars containing cattle in the course of interstate transportation for immediate slaughter, in accordance with these regulations.

Regulation 15. Cattle infested with the *Boophilus annulatus*, or southern cattle tick, disseminate the contagion of splenic, southern, or Texas fever; therefore cattle not of the modified quarantined area which are infested with the *Boophilus annulatus* ticks shall be considered as infected cattle and shall be subject to the regulations governing the interstate movement of cattle of the modified quarantined area.

Regulation 16. Stock-yard companies receiving interstate shipments of cattle infested with the said ticks shall place the said cattle in the pens set aside for the use of cattle of the modified quarantined area, and transportation companies are required to clean and disinfect, in accordance with the requirements of these regulations, all cars and boats used in interstate transportation which have contained the infected cattle.

Regulation 17. Cattle of the modified quarantined area, or other cattle infested with ticks, which have been properly dipped in Beaumont crude petroleum, or otherwise treated in a manner approved by the Secretary of Agriculture, under the supervision of an inspector of the Bureau of Animal Industry, and which have been examined and certified to be free of infection by the said inspector, may be shipped interstate at any time, subject only to such restrictions as may be imposed by State, Territorial, or District officers at points of destination: Provided, That when cattle are to be dipped, as specified herein, they shall, within six hours immediately prior to dipping, be given an opportunity to drink sufficient water to quench their thirst. Shipments of cattle that have been dipped or treated as herein provided shall be forwarded in clean, disinfected cars, shall be accompanied by certificates of dipping or treatment issued by the inspector supervising the same, and shall not be driven through the modified quarantined area or be unloaded therein, except at such points as may be designated in the rules of the Secretary of Agriculture.

The interstate movement of horses and mules infested with ticks (*Boophilus annulatus*) may be made only in accordance with the regulations and rules governing the interstate movement of tick-infested cattle.

Regulation 18. Before accepting or moving an interstate shipment of cattle to a point outside of the quarantined area from that portion of the quarantined area from which under the rules of the Secretary of Agriculture cattle may be shipped after inspection for purposes other than immediate slaughter, transportation companies shall secure a signed statement from each owner or consignor of said cattle, showing the purpose for which the cattle are shipped. In every case this statement shall accompany the waybills.

REGULATIONS TO PREVENT THE SPREAD OF SCABIES IN CATTLE.

[Effective April 15, 1907.]

Regulation 19. Cattle which are diseased with scabies shall not be shipped, traileed, otherwise removed, or allowed to drift from one State, Territory, or the District of Columbia, into another State, Territory, or the District of Columbia, except as hereinafter provided; and no cattle shall be shipped, traileed, otherwise removed, or allowed to drift from one State or Territory or portion thereof quarantined for the disease of scabies in cattle

into another State, Territory, or the District of Columbia, except as hereinafter provided, unless the said cattle shall have been inspected by an inspector of the Bureau of Animal Industry and found to be free from disease and are accompanied by a certificate from the said inspector.

The removal of cattle unaccompanied by a certificate of inspection from an inspector of the State, Territory, or the District of Columbia, or an inspector of the Bureau of Animal Industry, from a quarantined portion of a State, Territory, or the District of Columbia, into a portion of the same State, Territory, or the District of Columbia not quarantined, will subject the unquarantined portion of the State, Territory, or the District of Columbia to quarantine.

Regulation 20. In States or Territories or portions thereof quarantined by the Secretary of Agriculture for scabies in cattle, cattle which upon inspection by an inspector of the Bureau of Animal Industry at the time of shipment are found to be free from symptoms of scabies shall be given a certificate and allowed to move interstate for any purpose, subject only to such restrictions as may be imposed by the State, Territory, or District officers at points of unloading and destination; but if a herd or consignment intended for feeding, breeding, or stocking purposes be offered for inspection and interstate shipment, and a portion thereof is found to be diseased with scabies, or if the cattle offered for inspection and interstate shipment are part of a herd that is known to be so diseased, the diseased cattle offered for such shipment shall be dipped twice in either the lime-and-sulphur or the tobacco-and-sulphur dip, or treated once with Beaumont crude petroleum or similar oil or emulsion thereof in the manner hereinafter provided, and the cattle offered for such shipment which are not visibly diseased shall be dipped once before shipment.

Regulation 21. Cattle or herds of the quarantined area which are not diseased with scabies may, when accompanied by a permit issued by an inspector of the Bureau of Animal Industry within ten days of the date of shipping, be shipped interstate without inspection as "uninspected clean cattle" to any market or slaughtering center where inspection is maintained, or where facilities are available for dipping, spraying, or slaughtering cattle under the supervision of this Department: Provided, That the permits under which such shipments are made shall accompany the billing and be delivered by the transportation company to the inspector

at destination at the time of his inspection of the cattle. When so shipped, the cattle shall be submitted for inspection at destination. If found upon such inspection to be free from disease and exposure thereto en route, no further restriction shall be placed upon them, but if found to be infected or to have been exposed they shall not thereafter be permitted interstate shipment until treated as hereinbefore prescribed for diseased or exposed cattle, as the case may be.

Cattle not visibly diseased, but which may be a part of a diseased herd, may, without inspection, be shipped interstate as "uninspected exposed cattle" for immediate slaughter from points in the quarantined area to any recognized slaughtering center where separate pens are provided for yarding exposed cattle; or such cattle may, without inspection, be shipped interstate as "uninspected exposed cattle" for dipping or spraying to points where facilities are maintained for dipping or spraying cattle under the supervision of this Department, and where separate pens are provided for yarding exposed cattle. When "uninspected clean cattle" or "uninspected exposed cattle" are shipped interstate without inspection under the terms of this regulation the proper officers of the transportation company shall affix to both sides of each car carrying such cattle a durable placard, not less than $5\frac{1}{2}$ by 8 inches in size, on which shall be printed with permanent black ink in bold-face letters not less than $1\frac{1}{2}$ inches in height the words "Uninspected Clean Cattle" or "Uninspected Exposed Cattle," as the case may be. These placards shall also show the name of the place from which the shipment was made, the date of the shipment (which date must correspond with the date of the waybills and other papers), the name of the transportation company, and the name of the place of destination. Each of the waybills, conductors' manifests, memoranda, and bills of lading pertaining to such shipments by cars or boats shall have the words "Uninspected Clean Cattle" or "Uninspected Exposed Cattle," as the case may be, plainly written or stamped upon its face. Whenever such shipments are transferred to another transportation company or into other cars or into other boats, or are rebilled or reconsigned to a point other than the original destination, the cars into which said cattle are transferred and the new waybills, conductors' manifests, memoranda, and bills of lading covering such shipments by cars or boats shall be marked as herein specified for cars first carrying said cattle, and for the billing, etc., covering the same. If for

any reason the placards required by this regulation are removed from the car or are destroyed or rendered illegible, they shall be immediately replaced by the transportation company or its agents, the intention being that legible placards shall be maintained on the cars from the time of shipment until they arrive at destination, and until the disposition of the cars is determined by an inspector of the Bureau of Animal Industry.

Regulation 22. Cattle diseased with scabies which have been dipped once in either the lime-and-sulphur or the tobacco-and-sulphur dip under the supervision of an inspector of the Bureau of Animal Industry within ten days of date of shipment, may be shipped interstate for immediate slaughter to a recognized slaughtering center, and when so shipped the said cattle shall not be diverted en route and shall be slaughtered within two weeks after arrival at destination. If cattle diseased with scabies are to be shipped interstate for stockers or feeders, they shall be dipped twice, ten days apart, under the supervision of an inspector of the Bureau of Animal Industry, in either the lime-and-sulphur or the tobacco-and-sulphur dip; or they shall be either dipped once in, or sprayed once with, a properly prepared emulsion of Beaumont crude petroleum or similar oil under the supervision of such inspector. After dipping or spraying they shall be submitted to inspection before shipment. Cattle not visibly diseased, but which are known to be part of a diseased herd, intended for stockers or feeders, shall be dipped once under the supervision of an inspector of the Bureau of Animal Industry in either the lime-and-sulphur or the tobacco-and-sulphur dip before being shipped interstate; or they shall be either dipped once in, or sprayed once with, a properly prepared emulsion of Beaumont crude petroleum or similar oil under the supervision of an inspector of the Bureau of Animal Industry. However, diseased cattle may be dipped once in either the lime-and-sulphur or the tobacco-and-sulphur dip under the supervision of an inspector of the Bureau of Animal Industry at the point of origin and shipped interstate for stocking or feeding purposes if arrangements have been made for the second dipping en route or at destination at the required time after the first dipping at a point where there is an inspector stationed and under his supervision. Cattle not visibly diseased, but which are known to be part of a diseased herd, shipped to another State or Territory for feeding or stocking purposes, may be dipped or sprayed en route instead of at point of origin by special permission first had and obtained from the Chief of the Bureau of Animal Industry.

Regulation 23. Healthy cattle in a State or Territory not quarantined by the Secretary of Agriculture for scabies in cattle may be shipped interstate in clean ears, without inspection, for slaughter or for stockers or feeders: but if the said cattle be unloaded en route or at destination and placed in infectious premises, they shall be treated as exposed cattle, and shall not be forwarded to destination for purposes other than for immediate slaughter until they shall have been dipped or sprayed once, under the supervision of an inspector of the Bureau of Animal Industry, in any dip or mixture herein approved.

Regulation 24. When diseased cattle that have been dipped once in either the lime-and-sulphur or the tobacco-and-sulphur dip, or that have been either dipped once in, or sprayed once with, the petroleum or oil emulsion, or when cattle not visibly diseased but which are known to be a part of a diseased herd, are shipped interstate in accordance with Regulation 22, the proper officers of the transportation company shall affix to both sides of each car carrying such cattle a durable, conspicuous placard, not less than $5\frac{1}{2}$ by 8 inches in size, on which shall be printed with permanent black ink in bold-face letters, not less than $1\frac{1}{2}$ inches in height, the words "Dipped Scabby Cattle," or "Cattle Exposed to Scabies," as the case may be. These placards shall also show the name of the place from which the shipment was made, the date of the shipment (which must correspond with the date of the waybills and other papers), the name of the transportation company, and the name of the place of destination. Each of the waybills, conductors' manifests, memoranda, and bills of lading pertaining to such shipments by cars or boats shall have the words "Dipped Scabby Cattle," or "Cattle Exposed to Scabies," as the case may be, written or stamped upon its face. Whenever such shipments are transferred to another transportation company or into other cars or into other boats, or are rebilled or reconsigned to a point other than the original destination, the cars into which said cattle are transferred and the new waybills, conductors' manifests, memoranda, and bills of lading covering such shipments by cars or boats shall be marked as herein specified for cars first carrying said cattle and for the billing, etc., covering the same. If for any reason the placards required by this regulation are removed from the car or are destroyed or rendered illegible, they shall be immediately replaced by the transportation company or its agents; the intention being that legible placards shall be maintained on the cars from the time of shipment until they ar-

rive at destination or point of dipping or spraying, and the disposition of the cars is indicated by an inspector of the Bureau of Animal Industry.

Regulation 25. The dips now approved by the Department are the lime-and-sulphur dip, the tobacco-and-sulphur dip, and Beaumont crude petroleum. The lime-and-sulphur dip is made in the proportion of 12 pounds of unslaked lime and 24 pounds of flowers of sulphur to 100 gallons of water. The tobacco-and-sulphur dip is made with sufficient extract of tobacco or nicotine solution to give a mixture containing not less than five one-hundredths of 1 per cent. of nicotine and 2 per cent. flowers of sulphur. Proprietary dips may be used under provisions similar to those set out in Regulation 33. When Beaumont crude petroleum or similar oil or an emulsion thereof is used as a dip or spray for cattle diseased with or exposed to scabies, one dipping or spraying only is necessary. The Department disclaims responsibility for any loss or damage resulting from the dipping or spraying.

Regulation 26. Cattle shipped interstate under a certificate from an inspector of the Bureau of Animal Industry are not guaranteed uninterrupted transit, for in the event of the discovery of scabies or of exposure thereto en route the cattle shall thereafter be handled as diseased or exposed cattle, as hereinbefore provided, and the cars or other vehicles and the chutes, alleys, and pens which have been occupied by them shall be cleaned and disinfected as hereinafter provided.

Regulation 27. Public stock yards shall be considered infectious and the cattle yarded therein as having been exposed to the disease, and no cattle shall be removed therefrom to another State, Territory, or the District of Columbia, except for immediate slaughter, without dipping. Where, however, a part or all of the stock yards is reserved and set apart for the reception of uninfected shipments of cattle and is kept free from disease, cattle may be shipped interstate from the uninfected yards or portions thereof without dipping. If diseased cattle are introduced into the uninfected yards or portions thereof, they shall be immediately removed therefrom, and the chutes, alleys, and pens used by them thoroughly cleaned and disinfected. No cattle shall be shipped interstate for feeding or stocking purposes from any stock yards where an inspector of the Bureau of Animal Industry is stationed without a certificate of inspection or of dipping or spraying issued by the said inspector.

Regulation 28. Cars and other vehicles, yards, pens, sheds, chutes, etc., which have contained diseased cattle shall be cleaned and disinfected in the following manner: Remove all the litter and manure and then saturate the interior surfaces of the cars and woodwork, flooring, and ground of the chutes, alleys, and pens with a 5 per cent. solution of pure carbolic acid in water, with sufficient lime to show where it has been applied.

REGULATIONS TO PREVENT THE SPREAD OF SCABIES IN SHEEP.

[Effective April 15, 1907.]

Regulation 29. No sheep which are diseased with scabies shall be shipped, trailed, otherwise removed, or allowed to drift from one State, Territory, or the District of Columbia into another State, Territory, or the District of Columbia, except as hereinafter provided; and no sheep shall be shipped, trailed, otherwise removed, or allowed to drift from a State or Territory or portion thereof quarantined for the disease of scabies in sheep into another State, Territory, or the District of Columbia, except as hereinafter provided, until the sheep shall have been inspected by an inspector of the Bureau of Animal Industry, found to be free from the disease and from exposure thereto, and are accompanied by a certificate from the said inspector. All of the sheep in a certain flock or shipment in which the disease is present shall be classed as diseased sheep, and none of them shall be removed or offered for interstate shipment until dipped as hereinafter provided. The practice of "picking" a flock—i. e., removing sheep which are visibly diseased and then offering any portion of the remaining sheep for either inspection or interstate shipment, or both—is directly and positively prohibited.

Regulation 30. Healthy sheep in an area not quarantined for the disease of scabies in sheep which have not been exposed to the disease may be shipped or trailed interstate without restriction by the regulations of the Secretary of Agriculture to prevent the spread of scabies in sheep; but if said sheep be unloaded en route or at destination and are placed in infectious premises they shall thereafter be treated as exposed sheep and shall not be forwarded to destination for purposes other than immediate slaughter until they shall have been dipped under the supervision of an inspector of the Bureau of Animal Industry.

Regulation 31. Sheep that are diseased with scabies and that have been dipped once in one of the approved dips, under the su-

pervision of an inspector of the Bureau of Animal Industry within ten days of date of shipment, may be shipped interstate for immediate slaughter to a recognized slaughtering center, and when so shipped the said sheep shall not be diverted en route and shall be slaughtered within two weeks after arrival at destination. If diseased sheep are to be shipped interstate for stocking or feeding purposes they shall be dipped twice as above indicated, ten days apart, and shall be submitted to inspection before shipment.

Sheep that are not diseased with scabies, but which have been exposed to the contagion of the disease, may be moved interstate for feeding or stocking purposes after one dipping, or they may be shipped interstate by rail or boat to a recognized slaughtering center for immediate slaughter without dipping.

Regulation 32. When diseased sheep have been dipped once and are shipped interstate for slaughter in accordance with Regulation 31, or when exposed sheep are shipped interstate without dipping for immediate slaughter in accordance with Regulation 31, the proper officers of the transportation company shall affix to both sides of each car a durable placard not less than $5\frac{1}{2}$ by 8 inches in size, on which shall be printed with permanent black ink in bold-face letters not less than $1\frac{1}{2}$ inches in height the words "Dipped Scabby Sheep" or "Exposed Sheep for Slaughter," as the case may be. These placards shall also show the name of the place from which the shipment was made, the date of the shipment (which must correspond with the date of the waybills and other papers), the name of the transportation company, and the name of the place of destination. Each of the waybills, conductors' manifests, memoranda, and bills of lading pertaining to such shipments by cars or boats shall have the words "Dipped Scabby Sheep" or "Exposed Sheep for Slaughter," as the case may be, written or stamped upon its face. Whenever such shipments are transferred to another transportation company or into other cars or into other boats, or are rebilled or reconsigned to a point other than the original destination the cars into which said sheep are transferred and the new waybills, conductors' manifests, memoranda, and bills of lading covering such shipments by cars or boats shall be marked as herein specified for cars first carrying said sheep and for the billing, etc., covering the same. If for any reason the placards required by this regulation are removed from the car or are destroyed or rendered illegible, they shall be immediately replaced by the transportation company or its agents, the intention being that legible placards shall be

maintained on the cars from the time of shipment until they arrive at destination, and the disposition of the cars is indicated by an inspector of the Bureau of Animal Industry.

Regulation 33. The dips now approved are:

(a) The tobacco-and-sulphur dip, made with sufficient extract of tobacco or nicotine solution to give a mixture containing not less than five one-hundredths of 1 per cent. of nicotine and 2 per cent. flowers of sulphur: Provided, That for the first dipping of infected sheep, in lieu of the sulphur herein prescribed, a sufficient additional amount of extract of tobacco or nicotine solution shall be used to give a mixture containing not less than seven one-hundredths of 1 per cent, of nicotine.

(b) The lime-and-sulphur dip, made by mixing 8 pounds of unslaked lime and 24 pounds of flowers of sulphur and boiling with 30 gallons of water for not less than two hours. All sediment should be allowed to subside before the liquid is placed in the dipping vat. This liquid should be diluted sufficiently to make 100 gallons before use;

And pending further investigation, the following described dips:

(c) The cresol dip, which consists of a mixture of cresylic acid^a with soap. When diluted ready for use this dip should contain one-half of 1 per cent. of cresylic acid.

(d) The coal-tar creosote dip, which is made by mixing coal-tar creosote or coal-tar oils and cresylic acid separately with resin soap in varying proportions. This dip should contain when diluted ready for use not less than 1 per cent. by weight of coal-tar oils and cresylic acid. In no case should the diluted dip contain more than four-tenths of 1 per cent. nor less than one-tenth of 1 per cent. of cresylic acid; but when the proportion of cresylic acid falls below two-tenths of 1 per cent. the coal-tar oils should be increased sufficiently to bring the total of the tar oils and the cresylic acid in the diluted dip up to 1.2 per cent. by weight.

The cresol dip and the coal-tar creosote dip should always be tested on a small scale with the water and under the conditions to be employed in dipping in order to avoid possible injury to stock. The diluted sample should be allowed to stand for at least an hour. If after this length of time there is a separation of an oily layer the dip should not be used with that kind of water.

^a By the term cresylic acid as used in these regulations is meant cresols and other phenols derived from coal tar, none of which boils below 185° C. nor above 250° C.

Especial care in this connection is necessary where hard water is to be used.

In the undiluted coal-tar creosote dips there may be, in cold weather especially, a separation of naphthalene and other constituents of the dip. Care should therefore be taken to see that the concentrated dip is homogeneous in character before using any portion of it.

Manufacturers who desire the Department to approve their dips for official dipping should submit a sample of their product to the Bureau of Animal Industry in Washington and accompany this with the formula used in preparing the dip.

Before a proprietary substance is approved for use in official dipping the manufacturer must agree as follows:

(1) To recommend for sheep scab a dilution of his product which is approved by the Department of Agriculture.

(2) To maintain his product of uniform composition.

(3) To place on packages of dips which have been approved the following statement:

A sample of this product has been submitted to the Department of Agriculture for examination. We guarantee the contents of this package to be of the same composition as the sample submitted to the Department, and that when diluted according to the directions printed hereon for the treatment of sheep scab it will give a dipping fluid of the composition required of a _____^a dip by the regulations of the Secretary of Agriculture governing sheep scab.

(4) To have on containers or advertising matter no reference to the United States Government or any of its Departments except as provided in the preceding paragraph.

Regulation 34. The dipping shall be done carefully and the sheep handled as humanely as possible. The Department disclaims responsibility for any loss or damage resulting from the dipping, and those who wish to avoid any risks that may be incident to dipping at the stock yards, as well as to avoid liability to prosecution, should see that their sheep are free from disease before shipping them to market.

Regulation 35. Sheep shipped interstate under a certificate from an inspector of the Bureau of Animal Industry are not guaranteed uninterrupted transit; for in the event of the discovery of

^a There should be inserted here the name of the class of dips to which the product belongs, such as "cresol" or "lime and sulphur." etc.

scabies or of exposure thereto en route the sheep shall thereafter be handled as diseased or exposed sheep, as hereinbefore provided, and the cars or other vehicles and the chutes, alleys, and pens which have been occupied by them shall be cleaned and disinfected, as hereinafter provided.

Regulation 36. Public stock yards shall be considered infectious and the sheep yarded therein as having been exposed to the disease, and no sheep shall be shipped interstate therefrom, except for immediate slaughter, without dipping. Where, however, a part or all of the stock yards is reserved and set apart for the reception of uninfected shipments of sheep and is kept free of disease, sheep may be shipped interstate from the uninfected yards or portions thereof without dipping. If diseased sheep are introduced into the uninfected yards or portions thereof, they shall be immediately removed therefrom and the chutes, alleys, and pens occupied by the said sheep shall be thoroughly cleaned and disinfected. No sheep shall be shipped interstate for feeding or stocking purposes from any stock yards where an inspector of the Bureau of Animal Industry is stationed without a certificate of inspection or of dipping issued by the said inspector.

Regulation 37. Cars and other vehicles, yards, pens, sheds, chutes, etc., that have contained diseased sheep shall be cleaned and disinfected in the following manner: Remove all litter and manure and then saturate the interior surfaces of the cars and the woodwork, flooring, and ground of the sheds, alleyways, and pens with a solution containing 5 per cent. of pure carbolic acid or with a solution containing 2 per cent. of cresol. When cresol is used it must be mixed with soft soap in order to render it easily soluble in cold water. Cars and premises are not required to be cleaned and disinfected on account of their having contained "dipped scabby sheep" that have been dipped within ten days or sheep that have been exposed to scabies. In determining exposure, all sheep in a flock or shipment in which disease is present shall be classed as diseased.

REGULATIONS TO PREVENT THE SPREAD OF MALADIE DU COÏT.

[Effective April 15, 1907.]

Regulation 38. No horses or asses shall be offered for interstate shipment, shipped, transported, driven, or trailed, or otherwise removed or allowed to drift interstate from an area quarantined by the Secretary of Agriculture for maladie du coït, with-

out inspection and certification of freedom from the disease for the purpose of the particular movement by an inspector of the Bureau of Animal Industry. Owners and custodians of horses or asses for whom inspection is made shall provide such reasonable facilities and render such assistance as may be required by the inspector.

Regulation 39. If stallions or jacks shall be allowed to run at large in an area quarantined by the Secretary of Agriculture for *maladie du coït*, or if there shall be any breeding of horses or asses in a herd in an area quarantined by the Secretary of Agriculture for *maladie du coït* in which there is a horse or an ass which has been exposed to the infection of *maladie du coït* within eighteen months after the said exposure, a rule will be issued forbidding absolutely the interstate movement of any horses or asses from the said area.

Regulation 40. When it is necessary in order to prevent the spread of the disease and to aid in its extermination, and an appropriation is available therefor, the Department of Agriculture will purchase a diseased or exposed animal at a price based upon its actual value for work purposes at the time of purchase. When, however, the owner or owners will not accept the indemnity price offered by the Department, the inspector shall arrange for a board of three appraisers, who shall determine the price to be paid for the condemned animal. This board shall be constituted as follows: An inspector or other employe of the Bureau of Animal Industry, one person chosen by the owner of the animal or animals to be appraised, and the third member to be chosen by the two herein provided for.

Regulation 41. The Department will pay the sum of \$50 for authentic information leading to the discovery of the ownership and location of a stallion or a jack affected with the contagious venereal disease known as *maladie du coït*, and the sum of \$25 for authentic information leading to the discovery of the ownership and location of a female animal affected with the disease: Provided, That when such information is received from more than one person as to the location of the same animal and owner, the sum above named shall be paid to the first informant, and when doubt exists or a dispute arises as to who was the first informant, no reward shall be paid. When more than one diseased animal is found belonging to the same owner or on the same premises only one reward shall be paid.

REGULATIONS TO PREVENT THE SPREAD OF HOG CHOLERA AND SWINE
PLAGUE.

[Effective April 15, 1907.]

Regulation 42. No swine which are diseased with hog cholera or swine plague, or which have been exposed to either of the diseases by contact with diseased animals or by confinement in infectious cars, pens, or other premises, shall be transported, trailed, or driven from one State or Territory or the District of Columbia, into another State or Territory or the District of Columbia, except as hereinafter provided. All persons intending to ship swine interstate shall ascertain before offering them for such shipment that the animals are not diseased and have not been exposed to the contagion of either disease.

Regulation 43. Swine which are not diseased with hog cholera or swine plague and which have not been exposed to the infection thereof may be shipped from one State or Territory or the District of Columbia into another State or Territory or the District of Columbia without restriction by the regulations of the Secretary of Agriculture and subject only to such restrictions as may be imposed on the shipment by State or Territorial or District of Columbia officers at destination.

Regulation 44. Public stock yards shall be considered infectious, and no interstate movement of swine therefrom shall be made for feeding or stocking purposes. Diseased swine shall not be shipped interstate from the stock yards, but shall be slaughtered, subject to condemnation on post-mortem inspection; and all swine in a certain lot or shipment shall be classed as diseased when one or more of them show evidence of the disease. Swine that are not diseased and have been merely exposed by being in the yards may be shipped interstate to a recognized slaughtering center for immediate slaughter. Where, however, a part of the yard is set apart for the reception of uninfected shipments of swine and is kept free of infection, swine may be shipped interstate from the uninfected portions thereof without restriction. Should such part be contaminated by the introduction of diseased swine, said animals shall be immediately removed therefrom, and the chutes, alleys, and pens occupied by them thoroughly cleaned and disinfected as hereinafter provided.

Regulation 45. Cars and other vehicles and pens or yards which have contained interstate shipments of diseased or exposed swine shall be cleaned and disinfected as soon as possible after

unloading. Cars that have contained interstate shipments of swine shall not be removed until the inspector has ascertained the condition of the live animals and either released the cars or given notice that they shall be cleaned and disinfected. Cleaning and disinfection shall be done by first removing all litter and manure and then saturating the interior surfaces of the cars and the wood-work, flooring, and ground of the chutes, alleys, and pens with a 5 per cent. solution of pure carbolic acid in water, or with a solution containing 2 per cent. of cresol. When cresol is used it must be mixed with soft soap in order to render it easily soluble in water.

VETERINARY MEDICAL LAW OF INDIANA.

CHAPTER 98.

AN ACT regulating the practice of veterinary medicine and surgery, providing for the issuance of licenses to practice, providing for the appointment of a state board of veterinary medical examiners, and defining their duties, defining certain misdemeanors and providing penalties, and repealing all laws in conflict therewith and a certain Act therein specified.

(H. 267. Approved March 4, 1905.)

Section 1. Be it enacted by the General Assembly of the State of Indiana, That it shall hereafter be unlawful for any person to practice veterinary medicine or surgery in Indiana who has not first obtained a license so to do, as herein provided.

Sec. 2. A state board of veterinary medical examiners, composed of four members, shall be appointed by the Governor within thirty days after this law goes into effect. Said board shall consist of reputable, practicing veterinarians who are graduates of any veterinary college of good repute, and shall be non-partisan, not more than two members thereof to be of the same political party. Two of its members shall be appointed for two years, and two for four years, and at the expiration of such terms their successors shall be appointed for a period of four years. The Governor shall have power to remove any member of the board for incompetency, gross immorality, abuse of his official power, or for any other good cause, and may fill any vacancy occasioned by removal, death, resignation or otherwise.

Sec. 3. After this law goes into effect any person desiring to begin the practice of veterinary medicine and surgery shall procure from the state board of veterinary medical examiners a license, showing that such person is entitled to practice veterinary

medicine and surgery in the State of Indiana, and in order to procure such license the applicant shall submit to the State Board of Veterinary Medical Examiners his diploma, with an affidavit setting forth that the affiant is the person to whom such diploma was issued. Such application shall be accompanied by the affidavits of two freeholders resident in the same county in which the applicant resides, stating that the applicant is the person named in the accompanying diploma and application for license. Diplomas received by this board shall be returned to the person owning the same. Said applicant shall pay to said board the sum of five dollars at the time of making such application.

Sec. 4. All persons practicing veterinary medicine and surgery in the State of Indiana when this law goes into effect, and desiring to continue the same, shall, within ninety days thereafter, obtain a license showing that they are entitled to do so by presenting to the Board of Veterinary Medical Examiners the license possessed by them at the time of the passage of this law, together with an affidavit that they are legal possessors of the same, and the persons mentioned therein; and such applicant shall pay to the Board the sum of one dollar at the time of making such application. The said Board shall thereupon investigate the circumstances connected with the granting of the license so presented, and if it finds the same was properly issued pursuant to the provisions of law approved March 11, 1901, entitled "An act to define veterinary medicine and regulating the practice of veterinary surgery or any branch thereof in the State of Indiana;" or that the applicant holds a diploma from a veterinary school of a required standard, shall issue to such applicant a license to practice veterinary medicine and surgery in the State of Indiana.

Sec. 5. In the event that the applicant desiring to begin the practice of veterinary medicine and surgery shall present a diploma from a veterinary medical college which is not recognized by the Board as maintaining a sufficiently high grade or standard of education, as defined and fixed in the records of the Board, and in the event that an applicant practicing veterinary medicine and surgery in the State prior to the passage of this act, is not lawfully entitled to the license heretofore granted him, and does not hold a diploma from a veterinary school of the required standard, the applicant shall have the privilege of being examined as to his qualifications to practice veterinary medicine and surgery in such manner as the board shall provide. If he shall pass examination satisfactory to the Board, he shall receive a license the same as if

he had presented a satisfactory diploma or license. Should he fail to pass such an examination, he shall be permitted to submit to another examination within twelve months from the time of the first examination. All persons taking such examinations shall pay the said State Board of Veterinary Medical Examiners the sum of ten dollars, said payment entitling them to re-examination in case of failure at the first or any subsequent examination. Should any such applicant fail to pass the examination prescribed by said Board, he shall have the right to appeal to the circuit or superior court of the county in which such examination shall have been held, requiring said Board to show cause why such applicant should not be granted a license to practice veterinary medicine and surgery, upon the applicant giving a good and satisfactory bond approved by such court, to secure the cost of such appeal, should the appeal be determined against him.

Sec. 6. The State Board of Veterinary Medical Examiners shall hold regular meetings at such place as may be fixed by the board, on the second Tuesday of July and the second Tuesday of January of each year, and as often in addition as may be necessary for the transaction of such business as may properly come before it under the provisions of this act. It shall have the power to make all necessary rules and regulations for the transaction of its business. The Board shall elect a president, secretary and treasurer. For their services the members shall receive the sum of five dollars per day and their traveling expenses necessarily incurred in attendance upon the business of the Board. It shall be the duty of the Board to keep the record of all applications for licenses, and such record shall contain all the facts in such applications, including the action of the Board thereon. The compensation of the members of the Board shall be paid out of the fees received under the provisions of this act, and no part of the salary or other expenses of the Board shall be paid out of the State treasury. All moneys received by the Board as fees, in excess of the compensation and expense of said Board, shall be annually paid into the State treasury, for the benefit of the common school fund of the State, and all penalties imposed by this act shall also, when collected, be paid into said fund. Should not sufficient money be realized from the fees to pay the salaries and the expenses of the members of the Board, then the amount so received shall be properly prorated among the members. The treasurer of said Board shall give bond in the sum of two thousand dollars, sureties to be approved by the Governor, which bond shall be filed with the Auditor of State.

Sec. 7. The Board shall from time to time establish and record in a record kept by them for that purpose a schedule of the minimum requirements that must be complied with by applicants for licenses to practice veterinary medicine and surgery before they shall be entitled to receive a license. The Board shall also in like manner establish and cause to be recorded in such record a schedule of the minimum requirements and rules for the recognition of veterinary colleges, so as to keep these requirements up to the average standard of veterinary education in other states. No change shall be made to have any retroactive effect or that shall affect the students theretofore matriculated. Such record shall be at all times open for examination by the public. The Board shall have power to make and establish necessary rules and regulations for reciprocal recognition of certificates issued by other states, and prevent unjust and arbitrary exclusions by other states of graduates in veterinary medicine and surgery from this state who have fulfilled its requirements.

Sec. 8. When application for license is made and diploma or license submitted as herein provided, it shall be the duty of the Board to determine from the evidence submitted whether such diploma or license rightfully belongs and was issued to the person making such application for license, and whether the veterinary college conferring such diploma maintains a standard of veterinary medical education conforming to that fixed by the board, and whether the application otherwise complies with the rules of the board. If these facts are shown by competent evidence it shall be the duty of the board to issue a license signed by its president and secretary, and over its official seal, stating that the person applying for such license and possessing such diploma or license is entitled to a license to practice veterinary medicine and surgery in the State of Indiana. Said license shall be nonassignable and nontransferable. The board shall have the right to review the evidence upon which a license has been obtained, and if it shall be found that said license has been obtained by fraud or misrepresentation, the board shall revoke such license.

Sec. 9. The board may refuse to grant a license to any person guilty of felony, gross immorality, or addicted to the liquor or drug habit to such a degree as to render him unfit to practice veterinary medicine or surgery, and may, after notice and hearing, revoke any license which may have been granted to any person guilty of the above enumerated acts. An appeal may be taken from the action of the board in which the license was refused or

revoked by the board, on the applicant giving a good and satisfactory bond in the sum of two hundred dollars, to be approved by the court, to secure the cost of such appeals, should the appeal be determined against him. It shall be the duty of the attorney-general and of the prosecuting attorney of the court to which an appeal from any action of the board may be taken, to represent the board in any such appeal, and in case such board shall be sustained upon appeal a fee of twenty dollars shall be taxed as a part of the costs in favor of the prosecuting attorney.

Sec. 10. Any person, qualified, as required by this act shall upon his receipt of his license to practice, display said license in his office. Whoever shall fail to display his license in said office shall forfeit his license, and no license when once forfeited shall be restored to the original holder except on the payment to the State Board of Veterinary Medical Examiners of the sum of twenty-five dollars as a penalty for such failure, neglect or refusal.

Sec. 11. The practice of veterinary medicine or surgery within the meaning of this act, shall include any act or operation upon and the prescribing or giving of medicine for any relief of disease or injury or accident to any domestic animal, for the correction of habit, defective act, deformity or vice, and the practice of obstetrics and dentistry upon any domestic animal. Nothing in this act, however, shall be construed to prohibit veterinarians from other states in consultation, or members of the medical profession from prescribing for domestic animals in case of emergency, or prevent persons from practicing veterinary medicine or surgery upon animals belonging to themselves, or from performing the operation of castrating, spaying, obstetrics, and dehorning, or prevent assistance rendered in emergencies, or from rendering assistance on request of neighbors, nor shall this act apply to commissioned veterinary surgeons in the United States army.

Sec. 12. The right to use the title, veterinarian, veterinary surgeon, doctor of veterinary medicine or surgery, or any derivation thereof, shall be limited to those licensed to practice under this act. It shall be unlawful for any other reason to use said titles, and any person so doing shall be guilty of a misdemeanor and subject to a fine of not less than twenty-five dollars nor more than fifty dollars.

Sec. 13. All persons qualified under this act to practice medicine and surgery shall have the same recognition in prescription

work as is now accorded to regular practitioners of medicine by druggists and pharmacists.

Sec. 14. Any person practicing veterinary medicine or surgery and having a license under this act, shall be exempt from jury duty.

Sec. 15. To open an office for such purposes, or to announce to the public in any way an intention or readiness to practice veterinary medicine or surgery in any county in the State shall be to engage in the practice of veterinary medicine within the meaning of this act. Any person who shall practice or hold himself out as practicing veterinary medicine or surgery in this State, without having a license duly issued by the State Board of Veterinary Medical Examiners, as hereinbefore provided, shall be guilty of a misdemeanor, and on conviction thereof shall be fined not less than five dollars nor more than one hundred dollars.

Sec. 16. The board shall make an annual report to the governor and to the State Veterinary Medical Association.

Sec. 17. All laws and parts of laws in conflict with this act are hereby repealed, and also an act entitled "an act to define veterinary medicine and regulating the practice of veterinary surgery of any branch in the State of Indiana," approved March 11, 1903.

Nineteenth Annual Report

OF THE

Board of State Charities of Indiana

For the Year Ending September 30, 1908

TO THE GOVERNOR

INDIANAPOLIS:

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING.

1908.

THE STATE OF INDIANA.

EXECUTIVE DEPARTMENT.

DECEMBER 14, 1908.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE.

INDIANAPOLIS, December 23, 1908.

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

J. C. BILLHEIMER,

Auditor of State.

DECEMBER, 23, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,

Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 23, 1908.

FRED A. SIMS,

Secretary of State.

Received the within report and delivered to the printer December 23, 1908.

HARRY SLOUGH,

Clerk Printing Board.

On County Institutions.—W. H. Eichhorn, Carrie Goodwin Rexford, Demarchus C. Brown.

On Statistics and Publications.—Francis H. Gavisk, Mary A. Spink, M. D.

On Auditing.—Demarchus C. Brown, Carrie Goodwin Rexford.

On Children.—John H. Holliday, Mary A. Spink, M. D.

NOTE.—John H. Holliday was reappointed on November 11, 1908, for a term of three years, and W. H. Eichhorn, of Bluffton, was appointed November 11, 1908, succeeding Sydney B. Davis.

LETTER OF TRANSMITTAL.

INDIANAPOLIS, IND., December 12, 1908.

HON. J. FRANK HANLY, *Governor of Indiana:*

Dear Sir—In compliance with law, the Board of State Charities has the honor to submit herewith its nineteenth annual report, being for the twelve months ending September 30, 1908.

Respectfully,

DEMARCHUS C. BROWN,
CARRIE GOODWIN REXFORD,
SYDNEY B. DAVIS,
JOHN H. HOLLIDAY,
MARY A. SPINK,
FRANCIS H. GAVISK,

The Board of State Charities.

AMOS W. BUTLER.

Secretary.

GENERAL REPORT OF THE BOARD.

It will soon be twenty years since the law creating the Board of State Charities was enacted. The legislature of 1889, recognizing the scandals which had become notorious in the State institutions and the fact that there was no proper protection for either their inmates or their administration, provided for the establishment of this Board. It gave it the fullest authority to supervise the whole system of public charities of the State. It gave it the right to investigate any institution at any time. Its duties consist of visitation, inspection and investigation, and it is required to suggest, advise and recommend those things which it believes will be of advantage to the institutions and the wards contained therein.

The original membership of the Board was as follows: Rev. Oscar C. McCulloch, Mrs. C. W. Fairbanks, Mrs. Margaret F. Peelle, E. B. Martindale, John R. Elder and Timothy Nicholson. Of these, the two last named served longest, thirteen and nineteen years respectively.

At the regular quarterly meeting of the Board on Tuesday, January 28, 1908, Governor J. Frank Hanly announced the resignation of Timothy Nicholson, as one of its members. The Governor mentioned the fact that Mr. Nicholson had served the State faithfully in this capacity for nineteen years; he spoke of the good that had been done as the result of his efforts and the regret all must feel that he deemed it necessary to retire. He suggested further that it would be proper for the Board to make a minute in recognition of Mr. Nicholson's service, and the following, submitted by Demarchus C. Brown, was unanimously adopted:

"Timothy Nicholson has been a member of the Board of State Charities since its organization in 1889. He has given his time and services to the State unreservedly and faithfully. The results are clearly visible in the progress made by charitable workers in Indiana. Not only in Indiana has his influence been felt, but in the country at large as an attendant upon the National Conference of Charities and Corrections and the National Prison Association. Of the former he has been the honored president. Now that he retires from this Board, we as individuals and as a

Board desire to make a minute of our profound respect for him and his services to the unfortunate of our commonwealth. His good work will be an incentive to us. We regret deeply his retirement.

"Timothy Nicholson has also, for forty-two years, been a member and chairman of the Committee on Prisons, Jails and Charities of the Friends Yearly Meeting. His knowledge of the subject is therefore extensive. This has enabled him to serve the people intelligently. We think it appropriate to commend his life to all citizens who wish to serve the commonwealth."

Mr. John H. Holliday, for many years president of the Indianapolis Charity Organization Society, was selected by the Governor to succeed Timothy Nicholson. The personnel of the Board was further changed on March 5, 1908, by the appointment of Rev. Francis H. Gavisk and Dr. Mary A. Spink, of Indianapolis, to succeed Mr. Wm. P. Cooper and Dr. Sarah Stockton, both of whom had rendered valuable service to the State for several years.

At its next quarterly meeting, April 28th, the Board learned, with deep regret, of the death on the preceding day of Mr. John R. Elder. The following minute was adopted:

"John R. Elder was a charter member of the Board of State Charities, serving from its organization to 1902, thirteen years. His service was always willing and faithful. The public good was his only incentive. His advice was kind, but firm and courageous. With him nothing stood in the way of the advancement and improvement of our benevolent and correctional institutions. He was ready for work at any time and devoted much of his life to the public. We wish to make a minute of our appreciation of his services."

The Board of State Charities is a non-partisan body, for the supervision of the whole system of the charities of the State, including the institution, its inmates, its funds and its management. It has the oversight of three groups of institutions: charitable, educational and correctional; its duties extend to the State, county, city and township. It hopes not only to maintain the present high standard of the charities of Indiana, but to encourage those who are charged with their administration still further to improve them; to seek to provide for all the unfortunates of the State as they require care and in accordance with the best recognized methods; to endeavor to promote a proper understanding between the State and local institutions and organizations; to encourage co-operation between all existing pub-

lie and private agencies, to the end that the best results may be obtained, at the least expenditure of time and money, yet in the very best way; to show that the great field to be cultivated is the field of prevention,—prevention of all anti-social causes which bring such a burden upon the State, either locally or as a commonwealth.

The Board has been given only two administrative functions by the legislature, and these were not desired: one making it the representative of the State in caring for dependent children: the other making the secretary of the Board a member of the State Board of Truancy.

The State institutions which have been placed under the supervision of this Board are: The five hospitals for the insane, located, respectively, as follows: the Central at Indianapolis, the Northern at Logansport, the Eastern at Richmond, the Southern at Evansville, and the Southeastern, under construction at Madison; the Soldiers' Home at Lafayette; the Soldiers' and Sailors' Orphans' Home at Knightstown; the Village for Epileptics at Newcastle; the School for Feeble-Minded Youth at Fort Wayne; the Indiana State School for the Deaf and the Indiana School for the Blind, both at Indianapolis; the Indiana Boys' School at Plainfield; the Indiana Girls' School at Clermont; the State Prison at Michigan City; the Indiana Reformatory at Jeffersonville, and the Woman's Prison at Indianapolis. The county institutions supervised are the jail, poor asylum, orphans' home and hospital: in the townships, official poor relief: in the cities, hospitals, police stations, lock-ups, and private benevolent institutions which receive some public support. All orphans' homes caring for public wards are under the supervision of the Board, and it is also given authority under the juvenile court law to visit private institutions for children whether they receive public funds or not.

The Board is required to approve the articles of incorporation of organizations or institutions for the care of dependent, neglected or delinquent children; to pass upon the admission to Indiana of wards of alien institutions for children: to approve the per capita appropriations for the several State institutions which are allowed such appropriations; to provide uniform blanks and obtain uniform reports from various institutions and agencies; to examine plans for jails, poor asylums and some State institutions; to approve institutions before they can be used by the juvenile court for the care of children. It is required to receive

from township overseers of the poor reports of poor relief; from county auditors, of expenses of the county charities and corrections: from the sheriff, regarding the county jail: from the superintendent of the county poor asylum, concerning those placed in his care: from juvenile courts, boards of children's guardians, orphans' homes and other juvenile institutions concerning their wards: from the State institutions, both fiscal and population reports. In addition to this is the publication of its annual report, its quarterly bulletin and other occasional pamphlets.

The growth of the work since the creation of the Board has been remarkable, and it is still increasing at a rapid rate. The Board has endeavored to meet the demands made upon it, but it has been impossible to accomplish this because of its limited appropriation. This is particularly true in the work of caring for and supervising the work with dependent children.

Perhaps a better understanding of the extent of the Board's work may be had from the following statement of the number of persons who come under its supervision:

Enrolled in State institutions September 30, 1908.....	11,120
Present in poor asylums, August 31, 1908.....	3,278
Present in jails, September 30, 1908.....	1,275
Present in orphans' homes, September 30, 1908.....	1,633
Estimated population of town and city lock-ups, September 30, 1908..	100
Aided by township trustees during 1907.....	37,724
Brought into school by truant officers during 1907-8.....	26,181
Total.....	81,311

The following is the expense incurred by the above agencies:

State institutions—

Maintenance	\$1,800,469 96	
New buildings and permanent improvements	591,751 49	
		<hr/> \$2,392,221 45

County poor asylums—

Maintenance	\$446,431 28	
New buildings and permanent improvements	148,624 42	
		<hr/> \$595,055 70

Dependent children—

Orphans' homes:

Maintenance	\$196,239 31	
New buildings and permanent improvements	11,232 03	
		<hr/>

\$207,471 34

Agency of Board of State Charities.....	7,996 46	
		<hr/>

\$215,467 80

Boarding jail prisoners (State Statistician's report, 1907)	201,844 11
Salaries of truant officers.....	32,502 50
Outdoor poor relief.....	227,304 71
Total.....	\$3,664,396 27

Attention was called in the last annual report to the fact that the Legislature of 1907 enacted more laws relating to public charities than any two previous General Assemblies—thirty-five in all. From information we have received, some of these laws are already proving of great value. The new law for uniform management of the State institutions is not understood in the same way by all the institutions of the State and while all have taken advantage of some of its provisions, some have not done so as fully as they should. They have not understood that in each of the institutions under the supervision of this Board, the board of trustees appoints the superintendent or the head of the institution and he only has the right to appoint and discharge all other officers and employes. The superintendents appointed under this law are not to hold office for any definite term.

The wisdom of the establishment of the State Workhouse for Women, known legally as the Correctional Department of the Indiana Woman's Prison, is already apparent. Any one who visits that institution and sees its women inmates under the care of women, employed in the many busy activities of the place, will be impressed with the contrast between it and the terrible conditions under which women have been and are still being maintained in many of the county jails of this State.

The commission appointed for the establishment of a hospital for the treatment of tuberculosis has made extensive investigation of a great many sites and has finally selected one near Rockville, in Parke County. It contains 504 acres and cost the State \$24,000. Taking everything into consideration, it was the best site offered.

The new law relating to adult probation has already shown the wisdom of the legislature in its enactment. Most of the judges approve it. Some of them are very enthusiastic over the results secured. Following an investigation made, Demarchus C. Brown, a member of this Board, prepared a paper showing the operations of the new law, the statistical portion of which is here inserted:

“Fifty-nine counties are included in the circuits of the judges heard from, and the law has been put in operation in but 44 of

the 59. In the first year of its enforcement, 218 convicted persons were released under its provisions,—202 men and 16 women. These 218 persons had they not been released on suspended sentence would have been sent to the following institutions: Indiana Reformatory, 88; State Prison, 32; Woman's Prison, 5; county jail or workhouse, 91; unaccounted for, 2.

“It will be interesting to know the opinions of these 44 judges. Six are opposed to the law. One of these says it is an outrage on circuit courts; another, that it is a delusion and a snare as it virtually repeals penalties, makes the discretion of the judge the law, leaving it liable to be enforced differently in different courts as the several judges see it. Another fears it will not be productive of the good intended by its advocates. On the other hand, 35 of the judges speak favorably of the law and say the results are good. One of these says: ‘It is a good law and those suspended are doing nicely.’ Another speaks well of the law but suggests amendments. Still another says it is a wise law especially in case of a first conviction and in instances where the offense has been committed in order to secure food for the family and where the offender has really made an effort to get employment and has failed. Another, the law is absolutely necessary and admirable. Another is hopeful but says it is too soon to say definitely. Eight advocate caution in its use.”

The same judges were asked to give an opinion regarding the new laws concerning petit larceny, burglary and habitual criminals. By far the majority expressed favorable opinions of the increased sentence for petit larceny, and life imprisonment for habitual criminals. Many approve the new burglary law, though a great number consider it too severe. Several expressed a fear that juries would not convict under it. Experience has always shown that it is the certainty of sentence and not its severity that is best for good government. Therefore we shall not be surprised to learn sooner or later of a re-action against severe laws.

The law of 1907 defining a dependent and a neglected child, providing for its maintenance and fixing the punishment of any person responsible for or in any way contributing to its condition, is generally giving satisfaction. An important result of its operation has been a more careful investigation of the children made public wards and a lessening of public expense. All children that are made public wards under this law are required to be made the wards of one of three agencies: the court, the board of county commissioners or the board of children's guardians. Such chil-

dren may be cared for in any children's institution in the State, approved by the Board of State Charities, and all such guardians and such child-saving institutions are required, if possible, to find family homes for these children. All such children also are available for placement by the agents of the Board of State Charities at its option. The Board has secured an opinion from the Attorney-General on this subject. It will be found in the chapter of this report devoted to dependent children.

The Southeastern Hospital for the Insane, in process of erection at Madison, Ind., has, by reason of difficulties with the contractor, made slow progress. These difficulties became so annoying and exasperating that the commission found it impossible to continue the contract and it was cancelled March 11, 1908. After additional advertising, the contract for the completion of the buildings was let to Messrs. Pulse & Porter, of Greensburg, for the sum of \$853,909.35, which was \$151,738.51 more than the original contract called for. This contract was approved at the special session of the legislature, but the additional appropriation for the completion of the buildings was not made.

It is a pleasure to print in this report cuts of the grounds and buildings of this new hospital. The plates have been kindly loaned us by the architects, Messrs. Foltz & Parker, of Indianapolis. The commission in charge of the hospital is at present constituted as follows: Governor J. Frank Hanly, ex-officio, and Messrs. George A. H. Shideler, Marion; Eph Inman, Washington; Duane D. Jacobs, Lafayette, and Walter H. Lewis, Pendleton. Dr. S. E. Smith, superintendent of the Eastern Hospital for the Insane, acts as medical advisor to the commission. The site selected is on a high bluff, 450 feet above the Ohio River, overlooking the city of Madison. It contains 363 acres and is admirably suited to its purpose. Reference to the scientific method of its selection has heretofore been made. (An. Rept. 1905, p. 17.) The legislative act authorizing the hospital was approved February 21, 1905, this act carrying with it an appropriation of \$560,000. The legislature of 1907 made an additional appropriation of \$559,377.86, a total to date of \$1,119,377.86. The commission's estimate for the complete building as planned, including the general household equipment, shows a total of \$1,436,358.39. Its capacity will be approximately 1,000 beds. Even with this institution, which is the fifth of its kind, the State will not be able to care for all the insane needing treatment at its hands.

At the Village for Epileptics an additional building has been constructed. It is not quite as large as the two which have previously been built. We believe that the policy outlined by the friends of this new institution when the bill creating it was drawn, namely, that it should be of slow growth, is the correct one. If this institution is to grow into a model village, it should receive only certain classes of patients, or those for whom it can do the greatest good. The three cottages that have been built are for men. The time is approaching when children and women should be provided for. We believe it will be wise for the next legislature to give consideration to this subject. With the establishment of this institution, those formerly existing are more reluctant to receive the epileptic insane or the juvenile epileptic, consequently the pressure upon the new village for the admission of patients who cannot be received there is very great.

The National Association for the Study of Epilepsy and the Care of Epileptics is to meet in Indianapolis, November 10-11. This is the first time that the Association has come West and it is an honor that Indiana should have been chosen as its place of meeting this year. The organization includes the leading workers in this special field, many of whom will be present at the meeting.

Notwithstanding the additional provision made at the State Prison and the enactment of the adult probation law, the number of prisoners at the State Prison at Michigan City and the Reformatory at Jeffersonville continues to increase. This is in contrast with the population of the Boys' School at Plainfield and the Girls' School at Clermont, at both of which institutions the number of inmates is practically stationary, if not decreasing. That of the Woman's Prison at Indianapolis, outside of the new Correctional Department, remains practically stationary. The reason of the increase in the State Prison and the Reformatory is not that more persons are sentenced, but that fewer are released on parole. While recent legislatures have made provision for additional quarters and buildings at both institutions, still more will be needed under the present policy of paroling prisoners. It will be unfortunate to enlarge the capacity of these institutions. The subject is one of grave concern. With the wise use of the adult probation law, the establishment of a system of state workhouses under state supervision, or a modification of the present rules for paroling prisoners, at the present rate of committment their population should be reduced.

Heretofore practically all the prisoners at the State Prison and Reformatory have been employed. The past year the commercial conditions have been such that there has been a reduction in the amount of employment in some instances.

At the Reformatory at Jeffersonville what is called the "Trade Schools" plan has been adopted. So far as possible only such industries are installed as can be used to good purpose in teaching the young men a means of livelihood. Considerable attention is also given to physical, mental and moral training. The law provides that the articles manufactured shall be supplied, so far as can be, to the various institutions and civil and political divisions of the State, the surplus to be sold on the market.

The present law for prison labor at the State Prison will expire in 1910: consequently it will be necessary for the next legislature to make provision for the employment of the prisoners. No one believes that they should be maintained in idleness. Such a course is detrimental to their own good and to the welfare of the State. They must be employed. The question is, how? Perhaps no better system of employment has been devised in a state prison than that which has been in operation in the prison at Michigan City for the past few years. Under it practically one-half the prisoners are employed under some form of contract. The law provides that not more than 100 shall be employed on any one contract and for not more than eight hours a day. The other half of the population has been employed in work for the State in and about the institution.

At the Woman's Prison at Indianapolis those not employed in caring for the institution are engaged in laundering and sewing.

Taking everything into consideration, we feel that the present method of employing prisoners in our State is very good. It is quite a long step from the conditions of a few years ago. While it is not what we should like or what it will be, it is the best we have been able to devise and in this we have had the advice and co-operation of both labor representatives and manufacturers. We note with regret that the State Federation of Labor, at its last meeting at Vincennes, criticised the administration of this law at the Indiana Reformatory. We wish that the official representatives could visit that institution, as well as the State Prison, and see what a great improvement present conditions are over those which formerly existed. Then we feel they would be willing to give commendation rather than criticism.

There have been many changes among the superintendents of county poor asylums in the last two years. Some officials who have served in this capacity for a number of years have left and new ones have come in. Some of these new superintendents have shown from the first a desire to learn what they could and, so far as possible, put the best ideas into practice. The results have been an improved condition in these counties. The new poor asylums in Pike, Clark and Parke counties have been occupied and those in White and DeKalb are about ready for occupancy. There are still some that are discreditable alike to the counties in which they are located and to our State. Further reference is made to this in the section on "County Poor Asylums."

With all the progress that has been made in other fields of charities and corrections, the jail system remains the same. The jails of Indiana are our greatest reproach. They are a continuing disgrace to our name. While this is true in Indiana, it is also true in practically all the other states. New jails have been built and improved administration has been established in one after another of these institutions; but the system remains substantially the same, and the conditions existing in many of them, some that are even among the best, are simply horrible.

While it is essential that we keep before us the great need of changes in some parts of the State, in order to bring about a condition more in keeping with the general reputation of Indiana's charities, it is a pleasure to report decided improvement in a number of counties, in new buildings, better administration and greater public interest. Credit is due the various boards of county charities and corrections for their part in this. Seventy-five such boards have now been appointed. The boards of children's guardians, of which there are now fifty-six, are also to be commended for their efforts on behalf of neglected children.

Under the law of 1907, no child can be made a public ward except by the juvenile court. Therefore it practically means that the judge of every circuit court in the State outside of Marion County is required to establish a juvenile court in each county of his circuit. So far as we can learn, most of the judges have done so. We desire to call attention to the uniform blanks, prepared by this Board with the assistance of the Attorney-General and published in the Bulletin for June, 1907, for the proper administration of the laws relating to dependent, neglected and delinquent children and for the use of the juvenile court. We

have also prepared a set of record books for the juvenile court. These should be very helpful in securing the best results under the administration of these laws.

The Board of State Charities is required by law to approve the articles of incorporation of all organizations or associations which propose to care for dependent, neglected or delinquent children. (Acts of 1903, Chap. 237, Sec. 9.) Concerning this law the Attorney-General has rendered the following opinion:

“I am of the opinion that it was the legislative intention that before an association could care for dependent, neglected or delinquent children, it must submit its intended articles of incorporation to the Board of State Charities for the latter’s approval, and that a failure so to do is not a mere irregularity of incorporation, but is the omission of a prerequisite.”

During the past year the Secretary of State has referred to us the proposed articles of association of several benevolent organizations. Two of these are still pending. Of two others it was found not to be the intention to deal with dependent children and their articles of association were approved as follows: On March 27, the Evansville Associated Charities and on July 7 the Terre Haute Light House Mission. On April 29 the Board declined to approve the articles submitted by Frank Wetzel for the incorporation of the Rescue Mission of Lafayette.

We call attention to the chapter of this report referring to dependent children, showing the work of our agents in finding family homes for children and visiting those that have been placed out in families. At the same time we desire to present as strongly as we can the need for more agents to supervise these children who are the juvenile wards of the State. While the legislature has wisely made them State wards, it has failed to provide for the thorough supervision they should have. It is cheaper and better to have these children grow up properly in family homes than to have them grow up to lives of pauperism and crime.

The past year has been notably free from the disturbance of any extended investigations. Very few complaints have been received, but when made they were inquired into as promptly as possible, either on the request of the Governor or on the motion of the Board. Inquiries have been made during the past year at the State Prison, the Eastern Hospital for Insane and the Shelby County jail. Only that concerning the Eastern Hospital was made

public. On this occasion the Governor had requested the Board to make an investigation into the condition of John W. Terrell, a patient in the hospital from Wells County. A letter alleged to have been written by Mr. Terrell and published in the newspapers stated that he was not insane and was being held wrongfully at the hospital. The Board's committee on Insane Hospitals, through its chairman, Rev. Francis H. Gavisk, made the following report on this case:

INDIANAPOLIS, IND., February 5, 1908.

Hon. J. Frank Hanly, Governor of Indiana:

Dear Sir—I have the honor to report that on Wednesday afternoon, February 5, 1908, I visited the Eastern Hospital for the Insane near Richmond, to enquire into the condition of John W. Terrell, a patient from Wells County, registered as No. 2,098, admitted on account of chronic mania.

At the hospital I was shown a copy of the Bluffton Banner, of recent date, containing a letter to the editor and addressed to the public, said to have been written by the said Terrell, in which he declares that he is not insane, that he is being held at the hospital without cause, and also making general charges of mistreatment of patients in the hospital.

I was also shown by the Superintendent, Dr. Smith, five or six letters written by Terrell to his daughter Lucy, but not sent out because deemed unfit for mailing; these letters were written at various times, the first about one year after his admission to the hospital, and the last written the day after Thanksgiving Day, 1907. All were more or less incoherent, the last letter less so than the others; all the letters, however, were blasphemous in character, and denunciative of religion and its adherents, and one of them quite indecent with ribald verses and filled with charges against one of his former attorneys.

From the record of the hospital it appears that the patient has, since his reception at the institution, been an inmate of the infirmary cottage for the sick, because of his enfeebled condition. It was at the infirmary cottage that I saw the patient yesterday. I was introduced to him by Dr. Smith as a member of the Board of State Charities, to whom he might talk with entire freedom. He came into the room with a slight halt in his step and sat nervously in a chair opposite me; his manner, at first, was suspicious and silent, and he answered questions very slowly, hesitating for a word almost to a stutter; this was quite noticeable even after he became quite voluble; I am unable to say whether this was his habit in his normal condition or the result of mental disorder. At times he became silent with a vacant stare, at others his face showed a suspicious cunning. He enquired almost at once whether I was not a priest, and said I could not be a good man if I was. After awhile his conversation was friendly, but it was an incoherent denunciation of God, of Christ, of religion, of preachers and priests, of church members and of lawyers; his language was profane, blasphemous and obscene, but without frenzy or excitement, seeming to take a vain delight in blasphemy, though no one attempted to check him in it. Every attempt to lead him away from the topic of religion was in vain; the weather, his age, his health, the county of his birth and other topics

I introduced were unavailing—he always reverted to the one subject, religion. After relating an obscene story about a clergyman, his laughter was idiotic.

In answer to my questions he said he was very well treated and so were the other patients in the infirmary cottage, and that he had no cause of complaint except that Dr. Smith would not let him go home; he said the fare was good—they had more than enough to eat and he pointed to his girth to show that he had greatly increased in weight. He said he wanted to go home because his family was sick and because he had a "law suit" in Bluffton which he wanted to settle; that he would not have any lawyers around, but would defend his own suit; everybody said he was crazy; even his daughter Lucy said so, but he knew he wasn't, because people became crazy over religion and he never had been so crazy as to believe in religion.

Our conversation lasted about twenty minutes; it was held in the presence of Dr. Smith and the supervisor, neither of whom said anything during it. Terrell, himself, did most of the talking. At no time was there entire coherency in his talk or consecutiveness in thought.

The impression I received from my interview with Terrell is that he is insane. I am convinced that this impression would have been made upon me apart from the circumstances under which I saw the patient.

Taking into consideration the letters above alluded to and the conversation as above related, it is difficult to believe that the letter published in the Bluffton Banner was written by Terrell. The letters in the possession of Dr. Smith are badly spelled and incoherent; the conversation of the man was likewise incoherent and is quite unlike the letter in the Bluffton Banner said to have been written by Terrell, except in the flippant treatment of sacred subjects.

I am of the opinion that Dr. Smith's course in keeping from the patient all visitors other than members of his family and those having business relations with him, is the best, both for the patient and the public. The man is under indictment for a capital crime and this circumstance makes his situation different from that of other patients. I am also of the opinion that his general charges of mistreatment of patients is delusional. He made no allusion to it yesterday; he rather praised the hospital and spoke of Dr. Smith as a good man and of the attendant as a good man, and also thought in concluding our interview that I was a good man.

I am, very respectfully, yours,

(Signed) FRANCIS H. GAVISK,
Member Board of State Charities.

During the past year the Board has met in regular quarterly session, as required by law. In addition there have been numerous informal meetings of members of the different standing committees. Various conferences, both in Indiana and in other states, have been attended by representatives of the Board, and addresses have been delivered at some of these. By its committees it has visited the State institutions under its supervision, as well

as a number of those in the counties and cities, and full reports thereon have been made.

Early in the summer the Board authorized the secretary to employ a man to visit and inspect county institutions. We are pleased to learn that the directions of the Board have been complied with and that the work has been carefully and thoroughly done during the summer.

Within the past twelve months Indiana has lost the faithful services of two persons who had long been at the head of two of its leading institutions. Dr. Joseph G. Rogers died April 11, 1908. No one now connected with our State institutions has served the State so long as had he. He began as superintendent of the Central Hospital for the Insane June 7, 1879. Later he was chosen medical engineer for the commission which built the three new hospitals for the insane at Richmond, Logansport and Evansville respectively. When the hospital at Logansport was ready for occupancy in 1888, Dr. Rogers was selected as its superintendent and he served in that capacity continuously until his death. He gave freely and fully of his sympathy and his skill, and from the riches of his experience yielded a splendid service to the State and to the unfortunates under his care. The value of the service he rendered can never be estimated, and in his passing the State suffers a great and irreparable loss.

Prof. Andrew H. Graham died January 21, 1908. Since July 1, 1891 he had been superintendent of the Soldiers' and Sailors' Orphans' Home at Knightstown and his heart and mind were devoted to its welfare. The affection that he showed for the children at the home and the interest he took in them after they had gone were characteristic of his warm, generous heart and his splendid nature. We shall all miss Professor Graham, and though another comes to take his place and does his work well, it will not be the same as when he was there.

Dr. Rogers has been succeeded by Dr. Fred W. Terflinger, who was his first assistant physician. Professor Graham has been succeeded by Dr. W. T. Stott, the former president of Franklin College. He is well known throughout our State.

We all regret the fact that Miss Sarah L. Montgomery felt compelled to resign the position of superintendent of the Indiana Girls' School. Her fine culture, sympathetic nature and splendid ability as a teacher were such that we should have liked to have seen her retained in the work of this school. She took charge of

the premises after the buildings were completed and before they were furnished, and, with the aid of a selected number of the girls, cleaned them and installed the furniture and other property. The interest she had in these girls and the affection they had for her was shown in the improvement they made. Their better appearance, more natural life and improved conditions were remarked by all who had known them before and saw them after they had been at the new school for a while. Miss Montgomery resigned April 23, 1908, and Miss Charlotte Dye, who had been valuable in the capacity of assistant superintendent, was selected by the Board of Trustees as acting superintendent.*

Early in the past year the Governor directed each one of the State institutions under the supervision of this Board to report promptly to this office all accidents to inmates, officers and employes, or any other item of unusual occurrence at the institution. Most of the institutions have complied with the Governor's direction and these reports have been helpful to this Board and a protection to the institution.

We very much appreciate the deep interest that Governor J. Frank Hanly has taken in the public charities of the State throughout his administration. It has been his desire to keep in touch with the institutions and also to be advised concerning the great problems of public charities. In his inaugural address he announced his belief that the State should take care of those who by reason of mental affliction were unable to take care of themselves. He urged provision for the epileptics and the insane. The establishment of the Indiana Village for Epileptics and of the Southeastern Hospital for the Insane will be a lasting credit to his administration. Governor Hanly has visited the institutions of the State: he has attended the State Conferences and the meetings of this Board and he has maintained a lively interest toward all phases of its work.

The sixteenth annual session of the State Conference of Charities and Correction was held in Evansville, October 19-23, 1907, under the presidency of Rev. Francis H. Gavis, now a member of this Board. Considering the fact that the meeting occurred in one corner of the State, it was quite well attended. The interest was very good. Fifty-seven counties were represented in the attendance and there were present a number of visitors from other states. Governor J. Frank Hanly attended this, as well as each

*Miss Dye was made superintendent November 6, 1908.

of the other conferences which have been held during his administration, and rendered valuable help on the program. The next Conference will be held in South Bend in the autumn of 1908. Dr. George F. Edenharter, Superintendent of the Central Hospital for the Insane, was elected president.

Under the caption, "Recommendations to the Legislature," we have presented in a more formal way such measures as we would suggest for the immediate needs of that part of the State's work which comes under our supervision. Attention is also directed to the more detailed information which is given on subsequent pages as a part of this report, concerning the several State institutions, county poor asylums, county jails, orphans' homes, the insane, the epileptic, outdoor poor relief, etc.

The following table presents in condensed form the more important expenditures for public charities in Indiana for a series of years and some information as to the number of those who shared the State's care. Owing to a change in the fiscal year the figures for 1907 cover a period of only eleven months.

EXPENDITURES.

YEAR	STATE INSTITUTIONS		POOR ASYLUMS.		ORPHANS' HOMES		Official Outdoor Poor Relief
	Maintenance.	New Buildings and Extra- ordinary Repairs.	Maintenance	Land and New Buildings.	Maintenance	Land and New Buildings

RECOMMENDATIONS TO THE LEGISLATURE.

PROVISION FOR THE INSANE.

Indiana has assumed the responsibility of caring for all her insane citizens, but she has not been true to the obligation assumed. That she has done well, we all know; but she has not come up to her full duty—that is, that she shall make provision for all those unfortunates needing care and treatment. We should be careful not to make our insane hospitals too large. The Central is twice as large as it should be, and most of the others should not be increased, unless it be by colonies. The colony plan for caring for the insane, which contemplates the purchase of a farm a little distance removed from the insane hospital, yet near enough to be under its supervision and care, offers a feasible plan for providing additional room for the insane. This has been tried in other states, and the experience has been very satisfactory. To such a colony could be removed a number of mild, harmless, teachable patients, who would be benefited by the simple life and outdoor employment. We recommend that it be tried at one or more of our existing hospitals where the opportunity seems to be best.

We should not wish to see any additions built to the Central Hospital at Indianapolis, yet we feel that a receiving hospital would be a valuable aid to this institution.

The next Legislature should take steps looking to the establishment of another hospital for the insane in the northern part of the State. In order properly to treat the insane the State should be ready to receive them without delay. This it cannot do until it has provided, in advance, a bed for each 500 of the population.

LAND FOR SOUTHERN HOSPITAL FOR THE INSANE.

The small amount of land at the Southern Hospital for the Insane renders it impossible for the patients to get the benefit from outdoor life that they might have. The congenial employment of certain classes of patients is considered to be most valuable in their treatment. The care of orchards, small fruits, vines, gardens and live stock, including an amply dairy, would furnish much helpful employment, and at the same time the products would be very useful in supplying the institutions with fresh fruit and vegetables and

an ample supply of milk. To do this it is essential that an additional acreage be purchased for the use of the Southern Hospital. This should be not less than 160 acres. In fact, it is the opinion of some of the best institution superintendents, gathered from their ripe experience, that such an institution should have at least one acre of land for each inmate, counting its maximum population.

ATTENDANTS IN THE HOSPITALS FOR THE INSANE

The hospitals have all experienced much difficulty in obtaining and in keeping attendants because of the low wages paid. There has been some increase in compensation the past year, but the subject should receive further attention lest the work of the hospitals suffer. The pay should be sufficient to get and keep good help.

INSANE CRIMINALS.

There are confined in both our prisons for men, in the hospitals for the insane, and at times in county jails, persons convicted of crime who are insane. An insane person can receive neither proper treatment nor right care in a penal institution. Some of them doubtless could be benefited or cured if they could be properly treated. Unless they can be restored in mind they must be a continuing expense upon the State as long as they live. They are troublesome in prisons and jails, interfering with discipline, disturbing the peace, and not infrequently assaulting other inmates or officers. For their own good, the good of the State, and the best interests of the institutions, as well as a matter of economy, provision should be made for a hospital near-by and associated with one of the existing institutions, for the proper care and treatment of these unfortunates.

STATE PUBLIC SCHOOL FOR DEPENDENT CHILDREN.

While we have in the last ten or fifteen years made important progress in the question of dealing with minor public wards, yet at the same time there are grave objections to the present scattered system of caring for dependent children. The Board of Children's Guardians law provides for wayward and neglected children and the counties which have erected homes under this law can give the proper care to this class; but one central institution, which will act as a receiving home, will deal more effectually with the dependent children problem than the present orphans' homes can possibly do. In many of our small orphanages the children do not receive the

training necessary to fit them for useful lives and they are unacceptable in good family homes; whereas a central institution, managed and maintained by the State, would be equipped to prepare them in the very best possible way for family life. The central system has been given a thorough test in Michigan, Minnesota and Wisconsin, and results have proved it not only better for the children, but less expensive for the State.

THE JUVENILE COURT LAW.

The Juvenile Court law now in operation applies to boys under sixteen years of age and girls under seventeen years of age. This age limit should be extended to eighteen years for both boys and girls.

THE VILLAGE FOR EPILEPTICS.

We believe that the growth of the Indiana Village for Epileptics should be natural and slow, and that the Legislature should provide for its development in that way. It should be the policy of this institution to do the greatest good to the greatest number, and for this reason it should receive first those cases that are most hopeful. We believe it would be wise to erect a cottage for boys of school age, with two school rooms, one for the ordinary school training and the other for manual training. Nowhere is the epileptic child so much out of place as in the public schools. In the Village for Epileptics such a child could enter into normal life and be trained to a life of usefulness.

COUNTY JAILS.

The jail system we have is a relic of the olden times. It is not creditable to the State. The result of its operations is injurious. Our jails, as they are conducted, do more harm than good. In a rational prison system the jails should be simply places of detention. Convicted prisoners should be confined elsewhere. Provision should be made by law for the official condemnation of county jails by some board. The condemnation should be provided for when the jail is badly out of repair; when it is unsanitary; when the moral conditions are bad. In any event the authorities should be notified and given a reasonable time to remedy the wrong. In case of failure to do so, the facts should be properly presented by the board, and it should prohibit the use of the jail until the fault

was remedied or a new jail built. Another abuse of our present jail system is the fee allowed for boarding prisoners. This should be abolished.

DISTRICT WORKHOUSES.

Most of the prisoners who are convicted and sentenced to jail are charged with violating the State laws. It is hard to understand why the State should not have charge of them. In most of our jails the prisoners are not separated; they are not classified, and they lead idle and frequently immoral lives. Why should not the State establish one or more workhouses as the need seems to arise, under State control, conducted on the merit system? These could be located upon diversified land, so as to afford as great a variety of employment as possible. The experience of some of our sister states in this way should encourage us as to the probable success of such a venture. To these workhouses all convicted prisoners could be sent who now go to the county jails, except the sentence be an exceedingly short one. There they would be under good discipline and proper training, and would have regular employment. The prisoners could be more cheaply maintained in such institutions, and, inasmuch as they would be conducted in accordance with the best reformatory methods, better results should be secured.

THE CORRECTIONAL DEPARTMENT OF THE WOMAN'S PRISON.

The law of 1907 creating the correctional department of the Woman's Prison, provides that all women convicted of violation of the law, the punishment for which has heretofore consisted of confinement in the county jail or workhouse, shall be sentenced to the State institution. However, when the imprisonment adjudged is ninety days or less, or when the fine and costs assessed would not require a woman to serve more than thirty days, it is left to the discretion of the judge to send her either to the State institution or to the county jail or workhouse. This proviso will doubtless leave a great many women in the county jails. In the majority of such institutions there is a lack of proper sex separation; the women prisoners must depend upon the care of men; there are no arrangements for their employment; scandals frequently develop because of their presence there. It seems wise, therefore, to make such change in the law as will remove all convicted women from the county institutions. The correctional department of the Woman's Prison should be enlarged in order to receive them.

THE INDIANA BOYS' SCHOOL.

The proper training of the boys in the Indiana Boys' School demands many things not now possible because of the small appropriation granted the institution for its maintenance. The educational facilities should be improved; a fully equipped gymnasium is needed; the property should be thoroughly repaired; an additional parole agent should be employed. The next Legislature should provide for these needs, and should make a more liberal allowance for the operating expenses of the school. It has long needed a larger maintenance appropriation than it has received.

JUDGES' VISITS TO CORRECTIONAL INSTITUTIONS.

Under our new system of criminal laws the various reformatory and penal institutions of the State are really a part of the judicial system. Our judges as a rule do not understand them or their work. It would be wise if provision could be made requiring each judge of a circuit or criminal court from time to time to visit each of these institutions, and providing for the payment of his actual traveling expenses. The value of such a step would be very great in the administration of the law and helpful to the institutions.

THE SCHOOL FOR FEEBLE-MINDED YOUTH.

Under the present law, committing women between the ages of sixteen and forty-five years to the custodial department of the School for Feeble-Minded Youth, the complainant is liable for the costs of such procedure. The law should be changed so that the prosecuting attorney can bring such action upon information. The institution's custodial department for women should be enlarged. The State has never taken a more important step than the establishment of this department. The building erected in 1901, with a capacity of 130, has long been full, and there is urgent need for an addition in order that other women of this unfortunate class can be given the care and protection of the State.

UNPAID BOARDS OF TRUSTEES.

The Board of State Charities, from its beginning, has favored unpaid boards of trustees for our State institutions. After an experience of seventeen years, during a part of which time most of our boards have served without compensation, we are more than ever impressed with the belief in unpaid boards of trustees. We

believe that they render the best service, and in all respects are more satisfactory. Many persons will accept such positions as an honor. The service they render will be as faithful as if paid for. The small compensation allowed is not an attraction to those who would be glad to render service for its own sake. It is attractive, however, to many who will accept such positions for the small salaries paid. We feel it would be better for the institutions and for the State if the boards were composed of members who were paid only their actual expenses.

SUPERVISION OF THE STATE'S WARDS.

There is nothing which pays so well, whether measured by the good it accomplishes or by the value received for money expended, as thorough supervision of those who are wards of the State and have gone out from its several institutions. The dependent children who have been placed out in family homes are supposed to be looked after by representatives of the orphans' homes from which they have gone and by agents appointed by the Board of State Charities. There is supervision by special agents of the men released on parole from the Reformatory and the State Prison. There is also an agent of the Soldiers' and Sailors' Orphans' Home, who does some work and should do more. Additional agents are needed at the Indiana Boys' School and the Industrial School for Girls, and all these agencies should be brought to their highest efficiency in order that good homes may be sought and that a complete and thorough supervision of all the State's wards may be had.

As will be shown in this report, the Board of State Charities is not able, with the appropriations made to it, to do the visiting or exercise the supervision over the State's minor wards that the Legislature intended. The appropriation is not sufficient to properly do this work. Therefore we recommend an increase by which at least two agents may be added to the force of officers.

SICK AND CRIPPLED CHILDREN.

Those who have to deal with the dependent and neglected children of our State know that there are many cases where these little ones cannot be received into a family, or are not permitted to receive an education or learn a trade because they are crippled or sick. Many of these could be readily cured if the right provision was made for their care and treatment. As it is, they have not a fair chance in the world. Their infirmities shut them out of good

homes, prevent their obtaining an education and deprive them of a chance to earn a livelihood. Consequently they are burdens upon their relatives or upon the public throughout their lives. By a very small expenditure per capita, in an institution provided for their needs, a large number of them could be restored to their natural rights as children—the right to a home, to an education, to work for a living.

PROVISION FOR EXPENSES TO STATE CONFERENCE OF CHARITIES.

The value of the State Conference of Charities is known to all who have given consideration to the subject. Objection is sometimes made by a disbursing officer to the payment of expenses of an official in attending these conferences. Definite provision should be made by statute for the payment of this expense.

HOSPITAL FOR THE TREATMENT OF TUBERCULOSIS.

It should be borne in mind that the most useful hospitals of this class are those which deal with the incipient and presumably curable cases of tuberculosis, and those of which we hear the most and from which the best results are had are the least expensive in construction. We hope that this will be borne in mind in making provision for our new institution, which is so much needed. The Legislature should make at least a beginning in the way of an institution upon the land recently purchased.

THE TRUANCY LAW.

There should be a revision of the compulsory education law. This is imperative at this time because the Attorney General has rendered an opinion to the effect that the truant officers take their office upon their election in May. It will be seen that this means a change of officers near the end of the school year, and that the old officer is not permitted to conclude, while the new one can enter but little into its spirit or merits. The result is less efficient work than would be performed if one officer served throughout the school year. Therefore, in addition to some other provisions which should be made in the law, it is imperative for the best results that an amendment be made providing that the newly appointed truant officer shall take his position at the beginning of the next school year and serve through it.

THE STATE INSTITUTIONS.

In the last annual report of this Board, the figures given referred to thirteen State charitable and correctional institutions. To this list there has now been added the Village for Epileptics, while the Woman's Prison and the Indiana Girls' School, heretofore combined, are this year treated separately, being entirely different institutions. We have, therefore, fifteen State institutions, of which four are for the insane, two are for the soldiers and sailors and their wives, widows and orphans, one for the feeble-minded, one for the epileptic, one each for the blind and deaf, two State prisons, a reformatory and two reform schools.

At the beginning of the present fiscal year, these institutions had 10,593 inmates enrolled. During the year 2,841 others were received, making a total of 13,434 different persons cared for in the twelve months. At the close of the year the total enrollment was 11,120, of whom 780 were temporarily absent, leaving 10,340 as the exact population on September 30, 1908. Of this number, 6,365 were men and boys and 3,975 were women and girls. The following statement shows the population of each institution:

Present September 30, 1908.

	Males.	Females.	Total.
Central Hospital for Insane.....	815	1,035	1,850
Northern Hospital for Insane.....	499	439	938
Eastern Hospital for Insane.....	382	397	779
Southern Hospital for Insane.....	343	326	669
Soldiers' Home	385	443	828
Soldiers' and Sailors' Orphans' Home.....	240	195	435
Village for Epileptics.....	81	81
School for Feeble-Minded Youth.....	494	602	1,096
Indiana State School for the Deaf	150	138	288
Indiana School for the Blind.....	54	74	128
State Prison	1,128	1,128
State Reformatory	1,250	1,250
Indiana Woman's Prison	91	91
Indiana Girls' School	235	235
Indiana Boys' School	544	544
Total.....	6,365	3,975	10,340

All but four of the institutions show an increase in population over 1907. In some this is slight; in others, notable. The average daily attendance in the insane hospitals was greater by 68.46 in 1908 than in 1907; in the Soldiers' Home 23, and in the School for Feeble-Minded Youth 34.75. The Soldiers' and Sailors' Orphans' Home continues, as in years past, to show a decrease. Its enrollment on September 30, was 456 as against 473 at the beginning of the fiscal year and the daily average attendance in 1908 was 31 less than in the preceding year. The two educational institutions under the supervision of the Board of State Charities also show a decrease in population. The average attendance of the State School for the Deaf was 24.31 less and in the School for the Blind 4.99 less in 1908 than in 1907.

The records of the five State penal and correctional institutions show an increase in population in each except the Indiana Girls' School. At the beginning of the fiscal year there were 3,044 persons in these institutions. During the twelve months 1,632 were received, of whom 1,185 came direct from the courts and 462 from other sources, such as transfers, returns, etc. The daily average attendance was 3,160.32, an increase of 135.40 over the preceding year.

It will be found interesting to analyze this increase in the correctional institutions. For a number of years their population remained practically stationary, notwithstanding a notable increase in the number of the State's inhabitants. This is still true of the Boys' School. The daily average attendance at that institution in 1908 was 2.88 greater than in 1907, but with that exception it was less than in any one of the past five years. Within that period the daily average attendance was as high as 585. The daily average attendance in the Girls' School in 1908 was 218.38, a decrease of 31.59 from the preceding year. There have been but three years in the past five years in which the average attendance in the school was less than in 1908. In 1906 it reached 253.16. The attendance in the Woman's Prison shows an increase of 19.99 over 1907. This is due to the fact that the correctional department of that institution has recently been opened and is receiving short-sentence women. Otherwise there has been little change.

It will be seen, therefore, that the increase is in the population of the State Prison at Michigan City and the Reformatory at Jeffersonville. Never in their history have these institutions had so many prisoners. There were 1,128 at Michigan City and

1,250 at Jeffersonville on September 30, 1908. The daily average number present throughout the year was 1,095.12 and 1,211.55 respectively, at total of 2,306.67. Going back five years we find that in 1904 the average attendance at these two institutions was 1,770.99. In 1905 it was 157.37 greater than in 1904; in 1906 it was 83.38 greater than in 1905; in 1907 it was 148.81 greater than in 1906; in 1908 it was 144.12 greater than in 1907.

The natural inference might well be that crime is increasing, but this is not borne out by the figures. In fact the actual number of men sentenced to the State Prison and the Reformatory by the courts has shown little change from year to year for ten years past. From 1899 to 1908, inclusive, 2,480 men, an annual average of 248, were received at the State Prison from the various courts. During that period the lowest number received in any one fiscal year was 205 in 1903, and the highest, 303 in 1905. In the same length of time 3,825 men, an average of 382 annually, were received at the Reformatory from the courts, the lowest number in any fiscal year being 294 in 1907 and the highest 430 in 1904. It should be explained that the fiscal year 1907, on account of a change in dates, included only eleven months.

It is thus plain that the increase in the prison population is due not to a greater number of commitments, but to the fact that fewer men in proportion to the whole number of prisoners are being released. One of the natural effects of the indeterminate sentence and parole laws is that men serve a longer time on the average for the more serious offenses than under the old definite time law. Moreover the authorities of both the Prison and the Reformatory are more conservative in the granting of paroles than they were some years ago. The result is a steady increase in the prison population. This is brought out plainly in the following tabulated statements, which show the number of men received and released, and the percentage of the whole number in the institution each year, who were paroled. In the five years from 1899 to 1903, inclusive, there were 2,243 prisoners in the State Prison. In the same years 822, or 37 per cent. of these men were paroled by the Prison Parole Board. In the next five years there were 2,388 men in the Prison, of whom 719, or 30 per cent., were so released on parole. Similar figures reported from the Reformatory indicate a total of 3,106 men present in the first five year period, of whom 1,358 or 44 per cent. were paroled by the Board; in the second five year period, there were 2,990 men in

the institution, and 1,065 or 36 per cent. were so paroled. The number paroled from both institutions in the first five years was 41 per cent. of the aggregate population; in the second five years, 33 per cent.

*Based on the aggregate number of prisoners confined during the year.

For the care of these fifteen institutions and their inmates nearly 1,700 persons are employed by the State. In the charitable and educational institutions under the supervision of the Board of State Charities, there is an average of 4.92 inmates to each person on salary; in the penal and correctional institutions, 12.24. During the past year the average number of employes in the charitable and correctional institutions was 1,390.54 and in the correctional 258.17.

The following figures show what it cost the State to maintain the institutions in the fiscal year ending September 30, 1908:

	Per Capita.	Total.
Salaries and wages.....	\$68 23	\$682,569 94
Subsistence	49 94	499,644 15
Clothing	7 87	78,713 54
Office, domestic and outdoor expenses.....	44 19	442,143 75
Ordinary repairs	9 73	97,398 58
Total.....	\$179 96	\$1,800,469 96

In addition to the above, which constitute the regular operating expenses, the State spent \$591,751.49 for new buildings and permanent improvements. This brought the gross expenditure to a total of \$2,392,221.45. The institutions turned back into the State Treasury \$222,338.13 as receipts and earnings. This reduced the actual cost to \$2,169,883.32.

The more notable items included in the expenditures for new buildings are as follows: \$9,900 for electrical equipment at the Central Hospital for the Insane; \$60,000 for two cottages at the Eastern Hospital for the Insane, with an additional \$4,095.84 from the Governor's contingent fund for their equipment; \$31,495.78 for new boilers and \$39,923 for two congregate dining rooms at the Southern Hospital for the Insane; \$48,910.26 for a new hospital and equipment, \$6,000 for an ice and cold storage plant, \$10,000 for an engine, boiler and dynamo and \$14,921.18 for remodeling and furnishing the old hospital at the Soldiers' Home; \$8,902.41 for new boilers at the Soldiers' and Sailors' Orphans' Home; \$20,557.17 for an addition to the girls' cottage and \$13,325 for farm land at the School for Feeble-Minded Youth; \$60,745.88 for buildings and equipment at the Village for Epileptics; \$25,085.95 for the extension of walls at the State Prison; \$37,520 for a power plant and for remodeling the west wing of the Woman's Prison; \$25,000 for a new cottage, \$5,598 for a

store house and cold storage plant and \$5,750 for a boiler and equipment at the Indiana Girls' School; \$9,499.67 for boilers, dynamos and engines at the Indiana Boys' School.

For the most part the institutions were able to keep their maintenance expenses for the past year within the appropriations made them by the General Assembly. In three there was a small balance in the fund: the Soldiers' and Sailors' Orphans' Home, the State School for the Deaf and the School for the Blind. In each of these there was a decrease in population. For three other institutions, however, the maintenance appropriations were wholly inadequate. These were the Woman's Prison, the Indiana Girls' School and the Indiana Boys' School. The Woman's Prison used all of its maintenance fund of \$14,000 and in addition \$2,019.21 of what became available on account of excess population, \$3,539.12 from the Governor's contingent fund and a specific appropriation of \$1,000 made by the special session of the legislature of 1908. The Indiana Girls' School used all its maintenance fund of \$38,000, as well as \$8,944.95 from the Governor's contingent fund and \$7,874.31 from a specific appropriation made by the special session. The Indiana Boys' School used all its maintenance fund of \$75,000, also \$2,112.90 from the fund which became available on account of excess population and \$6,999.96 from a specific appropriation made by the special session. It is earnestly hoped that the next General Assembly will deal more justly with these institutions.

The Board of State Charities is required by law to certify to the average daily attendance of certain of the State institutions, which are granted an additional sum for maintenance if their average attendance exceeds a certain fixed number per month. Under this provision of law the Board at the close of the fiscal year approved the payment of the following sums to the different institutions indicated:

Central Hospital for Insane.....	\$6,134.066
Northern Hospital for Insane.....	8,669.511
Eastern Hospital for Insane.....	3,109.009
Southern Hospital for Insane.....	3,013.893
Village for Epileptics.....	11,810.325
School for Feeble-Minded Youth.....	6,586.790
Indiana State Prison.....	20,354.114
State Reformatory	35,825.647
Indiana Boys' School	2,112.93
Indiana Woman's Prison	2,019.211

THE STATE INSTITUTIONS.

SUMMARY OF STATISTICS FOR THE YEAR ENDING SEPTEMBER 30, 1908.

(Prepared in conformity to resolution adopted by the National Conference
of Charities and Correction, Philadelphia, May, 1906.)

CENTRAL HOSPITAL FOR INSANE—INDIANAPOLIS.

Dr. GEORGE F. EDENHARTER, Superintendent.

Real estate, 160 acres. Capacity, \$1,631. At the beginning of the year the hospital had an enrollment of 2,035 patients. During the year 396 were received, and the withdrawals and deaths numbered 422, leaving 2,009 enrolled September 30, 1908. Of these, 1,850 were actually present. The daily average attendance increased from 1,838 in 1907 to 1,838.34 in 1908. The average number of officers and employes for the year was 350.14.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.
Maintenance	\$310,000 00	\$310,000 00
Maintenance on account of excess population	6,134 06	3,385 48	\$2,748 58
Repairs	25,000 00	24,846 63	153 37
Clothing	15,000 00	14,968 61	31 39
Painting	10,000 00	10,000 00
Total	\$366,134 06	\$363,200 72	\$2,933 34
New buildings and extraordinary repairs—			
Cement work	\$2,500 00	\$1,983 83	\$516 17
Plumbing	5,000 00	4,999 87	13
Electric equipment	10,000 00	9,900 00	100 00
Fire protection	5,000 00	4,824 12	175 88
Total	\$22,500 00	\$21,707 82	\$792 18
Grand total	\$388,634 06	\$384,908 54	\$3,725 52

The per capita cost of maintenance, based on the regular operating expenses and the daily average attendance for the year, amounted to \$197.57. The value of the farm products grown on the institution farm and used during the year is estimated at \$5,895.44, or \$3.21 per capita, and the cost of producing it at \$2,727.78.

NORTHERN HOSPITAL FOR INSANE—LOGANSPORT.

Dr. FRED W. TERFLINGER, Superintendent.

Real estate, 293 acres. Capacity, 1,000. On October 1, 1907, the hospital had 969 patients enrolled; 273 were added and 188 withdrawn during the year, leaving the enrollment 1,054 at the

close of the period. Of these, 938 were actually present. There was an increase in the daily average attendance of inmates from 859.05 in 1907, to 905.55 in 1908. The average number of officers and employes for the year was 187.04.

EXPENDITURES.

The per capita cost of maintenance, based on the regular operating expenses and the daily average attendance for the year amounted to \$174.61.

The value of the farm products grown on the institution farm and used during the year is estimated at \$13,368.67, or \$14.76 per capita, and the cost of producing it at \$10,637.45.

EASTERN HOSPITAL FOR INSANE—RICHMOND.

DR. S. E. SMITH, Superintendent.

Real estate, 323.23 acres. Capacity, 831. Beginning the year with an enrollment of 752 patients, the hospital received 131 additional patients and dismissed 94, making the enrollment at the end of the year 789, and of this number all but 10 were actually present. The daily average attendance of patients increased from 730.17 in 1907 to 744.43 in 1908. The average attendance of officers and employes for the year was 153.6.

Grand total	\$217,224 92	\$214,821 84	\$2,403 08

The per capita cost of maintenance, based on the operating expenses and the daily average attendance for the year, was \$181.89. The value of the produce grown on the institution farm and consumed during the year is estimated at \$11,943.58, or \$16.04 per capita, and the cost of producing it at \$6,579.24..

SOUTHERN HOSPITAL FOR INSANE—EVANSVILLE.

DR. CHARLES E. LAUGHLIN, Superintendent.

Real estate, 160 acres. Capacity, 664. Number of patients enrolled September 30, 1907, 701; September 30, 1908, 721. The number of patients actually present on the last day of the fiscal year was 669. The average attendance for the year was 662.69, or 7.36 greater than for the preceding year. The average number of officers and employes for the year was 115.34.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.
Maintenance	\$106,260 00	\$106,260 00

Grant total	\$205,782 55	\$201,245 64	\$4,536 91

The per capita cost of maintenance, based on the operating expenses and the daily average attendance for the year, was \$177.05. The value of the produce grown on the institution farm and used during the year is estimated at \$3,983.71, or \$6.01 per capita, and the cost of producing it at \$1,003.37.

STATE SOLDIERS' HOME—LAFAYETTE.

Col. R. M. Smock, Commandant.

Real estate, 187 acres. Capacity, 915. At the beginning of the year the Home had 1,182 members enrolled. During the year 336 were added to the number enrolled and 279 withdrawn, leaving the enrollment on the last day of the 1908 fiscal year 1,239. Of these 828 were present September 30, 1908. The daily average attendance increased from 749 to 772. The attendance of officers and employes for the year averaged 160.25, but of this number 111.50 were members of the Home on salary.

Under the law creating this Home, all honorably discharged soldiers, sailors and marines and their wives and widows, residents of Indiana, are eligible to admission. Under a law enacted in 1905 army nurses may also be received. The State appropriates \$12.50 per month for each member, officer and employe for

current expenses, and is reimbursed to the extent of \$100 a year, allowed by the United States Government for every soldier maintained in a State home.

*Turned over to the Auditor of State. By deducting this sum and the amount spent for permanent improvements from the State per capita allowance, the actual operating expenses will be found to be \$137,401.48.

The per capita cost of gross maintenance, based on the operating expenses and the daily average attendance was \$177.98. The value of the produce raised on the institution grounds and used during the year is estimated at \$590.50, or 76 cents per capita, and the cost of producing it at \$362.75.

SOLDIERS' AND SAILORS' ORPHANS' HOME—KNIGHTSTOWN.

Dr. W. T. STOTT, Superintendent.

Real estate, 247 acres. Capacity, 600. At the beginning of the year the Home had an enrollment of 473 children. During the year 52 were added and 69 withdrawn, leaving the enrollment at the end of the year 456. All but 21 of these were present September 30, 1908. The daily average attendance decreased during the year from 444 to 413. The average number of officers and employes during the year was 90.25.

EXPENDITURES.

Operating expenses—	Appropriation.	Expended.	Balance.
Maintenance	\$95,000 00	\$94,864 72	\$135 28

The per capita cost of gross maintenance, based on the operating expenses and the daily average attendance, was \$255.29. The value of the produce raised on the institution farm and used during the year is estimated at \$5,251.75, or \$12.72 per capita, and the cost of producing it at \$3,009.69.

SCHOOL FOR FEEBLE-MINDED YOUTH—FORT WAYNE.

A. E. CARROLL, Superintendent.

Real estate, 564.55 acres. Capacity, 1,207. At the beginning of the year the school had an enrollment of 1,033. To this number 123 were added during the year, and there were 50 withdrawals, leaving the enrollment on September 30, 1908, 1,106. On that date there were 1,096 children present in the school. The daily average attendance of inmates during 1908 increased from 1,019.28 to 1,054.03. The average number of officers and employes was 164.56.

THE INDETERMINATE SENTENCE.

Indiana's method of dealing with lawbreakers has by no means reached the ideal. Nevertheless, the past decade has witnessed notable advance in that direction. The legislature of 1897 passed the indeterminate sentence and parole laws. They became operative April 1st of that year. The Prison South at Jeffersonville became the Indiana Reformatory; and the prison at Michigan City, the Indiana State Prison. The new laws provided that men between the ages of sixteen and thirty years, who would receive a prison sentence, should be sent to the Reformatory and those over thirty years of age, and all sentenced for treason or murder in the first or second degree, to the State Prison.

The old system of measuring out a definite amount of imprisonment for so much crime was replaced by the new laws. Under them men are committed to the State Prison or to the control of the Reformatory Board of Trustees, to be confined until such time within the maximum term fixed by law for the punishment of the various crimes, as they show satisfactory evidence of reformation. Provision was made for industrial training, and for giving the illiterate the rudiments of an education. The institutions were given authority to appoint agents to visit paroled men and in every possible way encourage them in their efforts to re-establish themselves. In a word, the State, instead of merely imprisoning those who broke her laws, sought by this new system to make better citizens of them. While apparently revolutionary in character, these laws are but an evolution of the principle embodied in the State's constitution of 1816 and again that of 1851, that the treatment of criminals in Indiana should be reformatory and not vindictive.

With each succeeding session of the General Assembly the State's penal system has been modified by laws scarcely less important than those of 1897. The indeterminate sentence has been extended to apply to the Woman's Prison at Indianapolis. Contract labor at the Reformatory has been superseded by trade schools and the manufacture of goods on State account. The juvenile court, contributory delinquency and adult probation laws, as well as notable enactments for the protection of deserted, neglected and dependent children, have been added to the statutes. Laws have been passed authorizing life imprisonment for

habitual criminals and sterilization of confirmed criminals, rapists, imbeciles and idiots. It would seem that provision has been made to meet practically every phase of delinquency, from that of the little child, whose offense might become serious if not met by the juvenile court and the probation officer, to that of the most hardened criminal, whose repeated violations of law make it necessary to deprive him for all time of his liberty.

The majority of these enactments have been in force too short a time to enable us to speak of results. Back of the indeterminate sentence and parole laws, however, is a record of eleven years' operation. Their constitutionality has stood the test of trial in the Supreme Court. They are constantly winning new friends as the people of the State come to understand them and to realize their possibilities. The last meeting of the State Bar Association received a very favorable report from its committee on this subject, which is printed in its proceedings. The results achieved under these laws indicate that their operation is a decided advantage to the State.

In the past eleven years 3,983 men have been paroled from the Reformatory and the State Prison. All of these had received much training and they were released under conditions that imposed honest, law-abiding lives for a period of at least one year each. During the term of their parole they were visited from time to time by agents of the institution from which they had been sent, and they were required to make regular written reports. As shown by the following tabulation, a decided majority of these 3,983 men lived up to the conditions of their parole. Generally unemployed when their offenses were committed, they went from prison to regular employment and during the time they were tested on parole earned for themselves \$1,079,375.40, an average of \$270.99 each.

Operations of Parole Law—April 1, 1897, to April 1, 1908.

	Reformatory.	State Prison.	Total.

<hr/>			
Savings	\$84,324 43	\$112,359 10	\$196,683 53

The parole system has not always proved successful. As shown above, 1,001 or 25.1 per cent. of the total number paroled during the eleven years, violated their paroles. Of these 576 have been returned to prison and 425 are still at large. No one ever claimed or expected that the plan would succeed in all cases. The old system of imprisonment at hard labor, often accompanied as it was by humiliating punishment, was not a success. Many prison wardens who are still working under it testify that a majority of their discharged prisoners return to criminal ways. The new system, however, has had remarkably good results. The records of the Prison and Reformatory show that under the old form of commitment ex-convicts were received at the rate of fifty-eight a year; under the new form, thirty-six a year. In the ten years preceding the passage of the indeterminate sentence law and the establishment of the Indiana Reformatory, there were received at the two State Prisons 8,004 prisoners; in the next ten years, 6,794 prisoners. There is an actual decrease of 1,210, or fifteen per cent., in favor of the latter decade, and this in the face of an increase of approximately fifteen per cent. in the population of the State. No agency but the indeterminate sentence and parole laws and their wise administration can be given the credit for this.

Another striking fact has been brought out by a study of the prison records. The average length of time men remain in confinement is longer under the new form than under the old form of commitment; at the Reformatory seven months, fourteen days longer; at the State Prison one year, four months and twenty-eight days longer. Note that while there has been an increase in both institutions, it is greater at the State Prison than at the Reformatory. It is the State Prison which receives the older and more hardened criminals. A further study of the figures discloses the fact that the increase is due largely to the longer time served by men convicted of such crimes as incest and rape.

These facts prove that the indeterminate sentence and parole laws of 1897 are a far more effective means of dealing with crime than any yet tried in Indiana. With the help of the preventive measures more recently enacted and of more loyal public support, which will come as these laws become better known, it is safe to predict for them even greater success in the next decade.

EPILEPTICS.

Indiana is to be congratulated upon the advanced ground she has taken in establishing a village for epileptics. A commission from Illinois and official representatives of Wisconsin, charged with the duty of making recommendations to the governors of their respective states, have recently visited Indianapolis and the new institution at New Castle. Three buildings for patients have been completed there. These accommodate eighty persons and can care for perhaps fifty more. The eighty patients present on the last day of the fiscal year may be classified as follows:

	Insane.	Feeble-Minded.	No Marked Mental Deficiency.	Aggregate.
Under 16 years.....	—	4	2	6
Between 16 and 45.....	9	29	32	70
Forty-five years and over.....	2	1	1	4
	—	—	—	—
Total	11	34	35	80

So far provision has been made for men only. The natural lay of the land is such as to provide readily for the complete separation of the sexes and the division of those of each sex into three groups. The theory upon which this institution exists is the greatest good to the greatest number of this class of defectives. That theory should be the dominating idea in the evolution of the Village, for its growth should be a development and not a rapid creation. Those for whom the most can be done, who can derive the greatest good from simple village life, who can be taught to lead lives of usefulness and happiness, should be the class sought out and helped. These include men, women and children. The buildings should be plain, inexpensive structures and the life should be simple and wholesome.

In the public institutions of this State there are now 916 epileptics supported at public expense. Of these 341 are in the State hospitals for the insane; 272 in the School for Feeble-Minded Youth; 223 in the county poor asylums, and 80 in the Village for Epileptics. Of these 916 epileptics, 484 are males and 432 females. Classified by ages, there are 63 under 16 years; 612 are between the ages of 16 and 45 years; 241 are 45 years and over. Therefore, by far the greatest number are in the period, under natural conditions, of greatest activity and accomplishment—the age of young adult life.

THE INSANE.

The total number of insane persons reported in Indiana on September 30, 1908, is 5,276. Of these there are 4,236 in the four State Hospitals for the Insane, as follows: Central Hospital, 1,850; Northern Hospital, 938; Eastern Hospital, 779, and Southern Hospital, 669. There are 1,033 who are not in such institutions. Five hundred and forty-two of these are in county poor asylums, 43 are in county jails, 337 are on furlough from the State hospitals, and 118 are at home or with friends as reported by county clerks. All of the four existing State hospitals are full to their capacity and the Central at Indianapolis, which has a capacity of 1,631 and 1,850 patients present, is greatly overcrowded. Besides, there are reported 588 insane persons in the Central district now outside the hospital. Add to this the 219 in the Central Hospital above its capacity and we have 807 patients needing hospital facilities in that district. In the Northern district there are 179 such persons, in the Eastern district 156, and in the Southern district 117. The confinement of these unfortunate insane people in the county poor asylums is greatly to be regretted. While in many they fare as well as could be expected under the circumstances; in most of such institutions there is almost an entire lack of facilities for ordinary care. In some the conditions are indescribably bad, and from time to time reports come to us of harsh or inhuman treatment. It is greatly to be regretted that any insane person should be confined in a jail. The conditions in the county jails in which these mental defectives are sometimes quartered are regrettable beyond description. The lack of care, the solitary imprisonment in a cell or the miscellaneous congregating with all kinds of prisoners where the insane are made the objects of ridicule and torment, are conditions that should bring upon us reproach. Some of these insane have committed suicide in jail, others have beaten their poor bodies against the bars or fallen and bruised themselves upon the floor, others have assaulted their fellow prisoners and even murdered them. All this has happened because we have not made proper provision for these unfortunate brothers of ours. Why should

we not look at this subject aright? Why should not proper provision be made for them?

Within the past twelve months 684 insane persons have been confined within the walls of Indiana jails. The majority of these remained but a short time pending their transfer to the State Hospital for the Insane. A number, however, remain many weeks and even months and years.

A man died recently in the Carroll County jail who had been confined there since 1897. In the Clark County jail at the present time is a man forty-five years of age who has been confined there for two years. On the occasion of a recent visit four insane persons were present. The jail is an old, worn-out building, which should be replaced by a new structure. An insane man was kept in the Fayette County jail more than a year. He killed a fellow prisoner soon after being confined. An insane, epileptic woman has spent several months in the Grant County jail, which has no special provision for this class. The Harrison County jail has had five insane persons within its walls during the past twelve months, yet this building has no proper facilities for the separation of inmates. In the Hamilton County jail is an insane man who has been there since April 7, 1907. An insane, epileptic woman has been an inmate of the Lawrence County jail for two and one-half years. Madison County, which has an old, ill-arranged and entirely inadequate jail, has an insane man imprisoned there and there have been 22 other inmates of this class during the year. A young man 22 years of age has been held in the Posey County jail for the past three months and four others were inmates of the same building during the year. A recent visitor to this institution said of it: "The ventilation is very poor. The windows are very small and are located near the top of the cell house. The cells are quite dark and gloomy." Warrick County jail, which has a special cell for the insane, has had an insane man present since December 27, 1905. There are four insane men in the Wayne County jail. One has spent two and one-half years there; another nearly two years; another one and one-half years, and the fourth ten months. In the Home for Friendless, where the women prisoners of Wayne County are kept, there are four insane inmates.

We are building a new hospital at Madison to be called the Southeastern, but it will not nearly accommodate the 1,150 insane persons now in sight who need proper State care. The State has

done well in making provision for its insane citizens. It has, however, not done all it should do. We should provide and keep available a bed for each 500 of our population if we would treat the problem of insanity in the proper way.

THE INSANE.

OFFICIAL OUTDOOR RELIEF IN 1907.

Under a law enacted by the legislature of 1895, the Board of State Charities receives once every three months from each township in the State a report of the quarter's work in helping the poor, sick and needy not in public institutions. This aid is called outdoor relief in distinction from that rendered by institutions, which is known as indoor relief. The reports are made by the township trustees (who are, ex officio, overseers of the poor), on blanks designed to show the full name, age, sex, color, civil condition and nationality of every person aided, the length of his residence in the township, and the date and amount of relief in each instance. If the help given is for a family, the blanks show in addition the sex and age of every person sharing the relief. During the year 1907 a report was received each quarter from every township in the State.

With the close of this year the Board is able to present a summary of the facts gleaned from these reports covering a period of twelve years. The most striking thing about this summary is the decline in the number of persons aided and the amount spent for their relief. There were 71,414 recipients of help from the public funds reported in 1896; 82,235 in 1897, when the reports were more complete than the first set received. The burden upon the taxpayers of helping this small army was \$355,255.29 in 1896 and \$388,343.67 in 1897. Laws subsequently enacted have required the overseers of the poor to investigate the actual needs before aiding those who apply for help; to assist those able to work in finding employment; to refuse help to able-bodied non-residents except by some form of labor; to co-operate with local charitable societies; to tax their own constituents for the money spent, and to report fully to the Board of County Commissioners and to the Board of State Charities their use of the public funds.

Under these laws there has been a notable weeding out of unworthy pensioners on the public treasury, more adequate relief of those in real need, and a decided reduction in the amount collected for this purpose by taxation. In 1906 there were 38,612 persons aided by the township overseers of the poor, as compared with 71,414 in 1896; in 1907, 37,724, as compared with 82,235 in 1897. The money cost of relieving these persons was \$233,612.70

in 1906, as against \$355,255.29 in 1896, and \$227,304.71 in 1907, as against \$388,343.67 in 1897.

This reduction has naturally had its effect on taxation. Prior to 1897 all bills for the relief of the poor were paid by the counties, from a general poor fund, and the expense was equitably distributed among the different townships. For the past ten years, however, each township has been required to care for its own poor, the trustee levying a tax against all the property in his township for that purpose. The following table will indicate the changes which have taken place in the levy for poor relief under the operation of this law. It will be noted that in 1898 the levy in 435 townships was five cents and over. In some of these the rate was occasionally as high as thirty cents on \$100. There were 64 townships in which no levy was required. In 1907 these figures were practically reversed. There were but 78 townships which had a levy of five cents and over, the highest of which was ten cents, and in 335 townships no levy was required. A ten-cent levy was made in the following townships in 1907: Harrison, in Bartholomew County; Brown, in Crawford County; Polk, in Monroe County; Union, in Perry County. The figures for the ten years are as follows:

Year.	No Levy.	Under Five Cents.	Five Cents and Over.	Number o Townships
1898.....	64	515	435	1,014
1899.....	50	607	357	1,014
1900.....	146	644	226	1,016
1901.....	154	620	240	1,014
1902.....	181	611	223	1,015
1903.....	233	617	165	1,015
1904.....	224	649	144	1,017
1905.....	289	581	146	1,016
1906.....	317	593	106	1,016
1907.....	335	603	78	1,016

Taking up more in detail the report for 1907, we find a decrease from the expenses of poor relief in 1906 amounting to \$6,307.99. It is evident that the lack of employment which caused so much distress during the winter of 1907-8, had not begun to be felt at the close of the year 1907.

It is interesting to note how the present trustees, who have now been in office three years, are reducing the expenditures for outdoor poor relief. Their predecessors, during their four years in office, spent an average of \$257,613.16 annually in helping the poor, while the average annual expenditures of the present trustees has been \$236,934.03. The reports for 1907 show that in a

total of 1,016 townships no aid was given in 65; under \$100 was given in 432; between \$100 and \$500 in 430; between \$500 and \$1,000 in 55; between \$1,000 and \$1,500 in 13; and over \$1,500 (reaching in Center Township, Marion County, which contains the city of Indianapolis, to \$6,196.75) in 21.

Attention has frequently been called to the large sums spent for poor relief in certain townships. It will be interesting to note the records of these townships for 1907. One of these was Vincennes Township, in Knox County, containing the city of Vincennes. In 1902 the trustee of that township spent \$7,858.25; in 1904, \$5,498.72. The past three years have seen a steady decrease in the amount given the poor of Vincennes; the expense in 1907 amounted to \$2,111.88. Another township whose record has undergone a noteworthy change is Union in Montgomery County, containing the city of Crawfordsville. In 1905 the trustee of that township spent \$6,825.53 in aiding the poor; in 1907, \$2,985.47. Many similar examples could be cited. No township in the State, however, has made such a reduction in its poor relief as Portage, in St. Joseph County, containing the city of South Bend. In 1897, 1898 and 1899 the trustee spent an average of \$13,805.18 annually. Then a new trustee took charge of the office, who proceeded at once to weed out a long list of unworthy pensioners on the public treasury. The result was a reduction in 1900 to \$2,066.74, and even that sum, low as it was in comparison with former expenditures, has never since been reached. In 1907 Portage Township's outdoor poor cost the public \$1,281.86.

The trustees report 37,724 persons as having shared in the relief given in 1907. The United States Census estimates Indiana's population in 1906 to have been 2,710,898. Using this as a basis, the number of persons aided last year is found to equal one in every 72 inhabitants of the State. As it was calculated that the number aided in 1897 was equal to one in every 31 of the State's inhabitants, this is another index to the remarkable change which the past decade has witnessed in the relief of the poor.

Classified by sexes, 17,877 males and 19,847 females were recipients of public aid. Practically half of these (to be exact, 17,842) were children—8,751 boys and 9,091 girls. Of the remaining 19,882 there were 15,100 between the ages of 17 and 60, of whom 6,570 were men and 8,530 were women; there were 2,354 men and 2,177 women over sixty years of age, and 202 men and 49 women whose ages were not given. Another classification of the males indicates 9,256 under twenty-one years of age, 8,419

known to be over twenty-one years (the voters) and 202 of unknown age.

Aid was given during the year 56,594 times. The white persons helped number 35,385, or 93.8 per cent. of the whole number, and the colored 2,339, or 6.2 per cent. According to the United States Census of 1900, Indiana has 2,458,502 white and 57,960 colored inhabitants. The above figures indicate, therefore, that 1.4 per cent. of the State's white population, and 4 per cent. of the colored population received help in 1907.

There will be found in the Indiana Bulletin of Charities and Correction for March, 1908, a compilation of the reports received by the Board of State Charities during the year 1907, arranged by counties and townships. So far as possible all the facts given have been properly classified. The reports are less satisfactory than could be desired in the matter of the nativity and occupation of those aided and the reasons for giving help. In some instances these questions are unanswered. So far as the facts have been reported, however, it will be found that by far the greater number of persons aided were of American birth, that the majority were without a skilled trade or profession and that sickness more frequently than any other reason was given as the cause for asking help.

With the close of the current calendar year the present trustees will have concluded the four-year term of office to which they were elected. The following is the record of their first three years in office:

	1907.	1906.	1905.
Total number of persons receiving aid	37,724	38,612	45,331

REPORT OF THE SECRETARY.

Ladies and Gentlemen—The theory upon which our Board was created is that it shall be an unpaid, bi-partisan board, having a paid secretary and such assistants as are necessary to carry on the work.

This board is given the fullest authority that the legislature can bestow, to visit and inspect the institutions, to investigate the conditions that exist and to report, suggest, advise and recommend what it deems is for the best interest of all concerned. It is the duty of such a board to inform itself of the best that is being advocated and practiced in all lines of charitable effort; to inform the public of those things that should be done or left undone in order to secure better conditions or to achieve more satisfactory results. In its work it is wise to adopt as a guide the principle that it is better to prevent undesirable conditions by helpful suggestions than to have them grow until they become a public scandal. Let it be definitely understood that a Board of State Charities, as generally recognized, is not an administrative body. Its duties are purely supervisory, and it is not clothed with authority to compel the execution of its recommendations. We would not have it so. As a last resort, it has the right to appeal to that powerful weapon against wrong, publicity through the press, and wrong can not exist when fully exposed to the public view. It is the duty of such a board to represent the public; to see that every inmate of every public institution, local or state, receives proper care; that every institution is properly conducted; that the public funds are wisely administered. On the other hand, it is a source of strength to the management in protecting it against unjust criticism.

As a matter of fact, the work of our Board proper is (a) that contemplated in the original law passed by the legislature of 1889: the supervision of the whole system of public charities; (b) the administration of the dependent children law of 1897 and its subsequent amendments and supplementary acts; (c) co-operation of the secretary in the direction of the compulsory education or truancy law of 1897 and the amendments thereto.

The demands under the first two are great and continually

growing. We simply cannot meet them all. We do the best we can with that which seems most important or most urgent. We are in great need of one or two more persons on our office force, one of whom should be competent for the inspection of institutions when needed. Our agents are faithful workers, but they cannot do all the work that devolves upon them. It is wholly impossible to do all that should be done. The children that have been placed in family homes need more frequent visiting. It is for the good of the children; it is for the best interest of the State. While the law requires the various child-saving agencies to find homes for their wards, most of them have relaxed their efforts in that particular and seek to have the agents of this Board do that work. Our agents are always glad to render any service they can, but there is work enough for every institution and organization in the State. There is work for all, so let none of us shirk our duties.

The work under the compulsory education law remains about the same. It does not require any great amount of time each year. This duty is one that came unsought into this office. It would be perfectly agreeable could we be relieved of it. The law is a good one. While in its administration much good is being done, it would be more effective if put upon a plane somewhat akin to that of the original law of 1897.

So far as possible, the institutions have been visited the past year. The number visited is not as large as usual on account of the illness of the Secretary. However, by the kindness of the members of the Board in making visits and investigations and with the aid of Prof. A. R. Charman, of Terre Haute, for several years a member of the Vigo County Board of Charities and Correction, who by your authority I employed as a visitor to county institutions during a part of the past summer, a large amount of outside work has been done. With the fine help given by Miss Laura Greely, chief clerk, and the other clerks, the office work has been well kept up. The State Agency has been most of the year under the direction of Miss Mary Carmichael, as Acting State Agent. She and the other agents have rendered good service. Mr. Wilfred S. Reynolds, of Plainfield, who was employed on January 28th as an agent, was given charge of the work of the State Agency August 15, 1908.

Addresses have been delivered and meetings attended in various places by members of the Board and the Secretary. Many

invitations, however, had to be declined. The Secretary by invitation attended and delivered addresses at the Ohio State Conference of Charities and Correction, the Virginia State Conference of Charities and Correction, the National Conference of Charities and Correction and the Monday Club of Cincinnati, Ohio. Within our own State he has spoken at different places to charity workers, churches, teachers and clubs. The value of meetings of local workers cannot be overestimated. They should be encouraged at every opportunity.

On April 20th and 22nd I accompanied the Governor and the Tuberculosis Commission on a visit to the proposed sites for the Tuberculosis Hospital. The Commission had previously investigated upwards of thirty sites and had eliminated all but five. We visited one site at Laurel, two at Spencer, one at Greencastle and one at Rockville. A very careful examination of each site and an estimate of its availability were made. The Commission finally selected the last named site.

The question of new buildings was taken up with officers from several counties. Plans have been submitted as required by law for new jails in Lake and Laporte counties. These after consultation with the boards of county commissioners and the architects were redrawn and passed upon favorably by the Board. We have also examined plans for new buildings at the Indiana Girls' School and for a new cottage at the Indiana Village for Epileptics. Our Board, through its Committee on Hospitals for Insane, believing that the location of the new dining rooms at the Southern Hospital was objectionable, strongly advised against it. The new jail in Warren County has been finished. The Floyd County jail has been remodeled. This has been a disgrace for the past half-century. It can never be a satisfactory building, but the improvements made are so helpful that we take pleasure in commending them. The Vigo County jail is also being remodeled. The new poor asylums in Clark, Parke and White counties have been completed and that in Dekalb County is under construction.

We are accustomed to hear favorable expressions regarding the progress of the public charities and the charities laws of our State. That there have been great changes for the better in the past fifteen years and that our legislature has enacted a number of wise and progressive laws we know. Yet there are conditions existing of which we cannot be proud and others that are a disgrace to the locality, a reproach to the State. When in some of

our county jails there is really no separation of the sexes so far as results are concerned; when the quarters are crowded far beyond their capacity and prisoners are "stacked up," to use the words of one sheriff—what excuse can we give for such shocking conditions? When in some of our poor asylums the insane are shackled, or whipped, or locked up in unsanitary rooms that are overrun with vermin—this is to our shame. When in some orphans' homes normal children are kept for years, to eat the bread of dependence and lack the influence of proper family homes to fit them for independent lives, it is an injustice to the children and to the State. When in some counties men and women decline to accept appointment upon boards of county charities and other local boards and are willing to see these things continue, they are putting aside a form of personal service that would result in much good to their fellow men and to the public.

These things should not be. Our jail system is a reproach to our people. The poor asylum conditions in many places are indescribably bad. We are not doing as efficient work in finding homes for children as some of our neighboring States. In many counties the great possibilities of local boards for good, and the chance afforded for real, helpful, personal service have not been recognized. We need to work to better conditions. To do this the creation of a proper public sentiment is necessary. Our people should be aroused. If they knew things as they are and their consequences, they would not stand for them. Their voices and their energies would be exerted in behalf of better conditions.

There are now Boards of County Charities in 75 counties. There are 17 counties that have none. Of the 75 boards that have been appointed, 57 reported last year, 7 reported just before the year began and 11 are inactive. Those counties with inactive boards are as follows: Blackford, Brown, Fayette, Huntington, Kosciusko, Perry, Porter, Posey, Scott, Shelby, Tipton. In the following counties there are no boards: Boone, Dekalb, Fountain, Jennings, Lake, Marshall, Martin, Montgomery, Noble, Ohio, Pulaski, Ripley, Starke, Steuben, Switzerland, Union, Whitley.

There are boards of children's guardians in 56 counties, according to the reports received at our office. Twenty-nine of these boards make reports as the law provides. New boards have been appointed in Clinton and Greene counties recently. The boards in Miami, Parke, Vermillion, Benton, Delaware, Sullivan,

Morgan, Clark, Floyd and Franklin deserve special mention for their activity.

Under the laws of 1907, no child can be made a public ward except by the juvenile court. Therefore it practically means that the judge of every circuit court in the State outside of Marion County is required to establish a juvenile court in his county. So far as we can learn, many of the judges have done so. We desire again to call attention to the uniform blanks, prepared by this Board with the assistance of the Attorney-General and published in the bulletin for June, 1907, for the proper administration of the laws relating to dependent, neglected and delinquent children and for the use of the juvenile court. We have also prepared a set of record books for the juvenile court. These should be helpful in securing the best results under the administration of these laws. Fifty-six counties have probation officers.

The work of the orphans' homes has been very much as usual. On the last day of the fiscal year there were 1,633 public wards in the various institutions which receive this class of children. In the matter of co-operation there has been some improvement. The associations are not doing all they can to find homes and few are visiting their children as the law provides. In some counties the orphans' home has been an item of considerable expense and in others the number of children has run down to a very low figure. In these counties the sentiment is in favor of closing such homes, but in several other counties there is a sentiment in favor of establishing orphans' homes. Among these may be mentioned Wayne, Elkhart, Adams and Howard. This we feel is due in some measure to a lack of activity among the existing institutions in placing children in families. There is no need for additional orphans' homes. In fact, the capacity of institutions at present receiving public wards is far greater than the demand made upon them. There are approximately 1,200 beds now in children's institutions of the State which are unoccupied and are available.

There are frequent requests for the agents of this Board to find homes for children that are in institutions. Sometimes complaints are made on account of their not doing so or at least not finding them as promptly as some persons think they should. Inasmuch as the law under which the agents act requires them to distribute their services equitably among the several counties, it will occur to any persons of thoughtful mind that if this is done not many children can be placed for any one county during the

year. However, there are some counties that do not require the services of the agents and this from time to time gives them an opportunity to render additional service in counties where it is needed.

The usual work connected with the administration of the compulsory education law has been carried on during the year. Mr. C. N. Kendall, Superintendent of the Indianapolis City Schools, has served as secretary of the State Truancy Board and your secretary as president. The third member of the Board is the county superintendent of schools in each county. All appointments of officers are made by the local Board of Education. The work carried on in this office includes considerable correspondence and the collection and publication of the annual reports of the various truant officers. On subsequent pages of this report will be found an article on this subject, with statistics of the work done in each county.

The usual pamphlet was prepared this year for Prison Sunday and sent out to the ministers in different parts of the State. There is an increasing interest in the observance of the last Sunday in October as Prison Sunday. Those who have observed it once generally desire to continue the practice. The pamphlet which is distributed by the Board of State Charities contains valuable information for the congregations and is helpful to every citizen.

We have been honored in the past year by visits from prominent and well-known workers in the field of charities. It is a pleasure to have these persons with us. Among our visitors during the past year was a committee from the new Virginia Board of State Charities, which inquired into our methods of work; a representative of the Illinois Board of State Charities, who spent some time studying our records; Miss Mary K. Connyngton, a special agent of the Bureau of the Census; Mrs. J. Ellen Foster, special agent of the United States Department of Justice; Mr. G. Halfred Von Koch, of Sweden, who was studying the work of Boards of State Charities and the administration of outdoor poor relief; and Dr. Thomas J. Riley, of the University of Missouri, a representative of the Russell Sage Foundation, who was studying official poor relief. In addition to these, we have received a request from Dr. H. H. Hart, of Chicago, another representative of the Russell Sage Foundation, who is studying the work of placing children in family homes in the United States. While Dr. Hart intends to study the work of the whole country, he will

specialize on six states, Indiana being one of the six. I have offered him the facilities of the office for the work in Indiana. A commission appointed by the legislature of Maine to inquire into the work of Boards of State Charities also interviewed some of our members regarding the value of such a board. From many other states inquiries regarding our laws and our work have been received.

There is a continual, spreading interest in the work of local charities, both in the counties and in the smaller cities and towns. This is evidenced by greater activity on the part of some of the existing organizations and by the establishment of new charity organization societies in Bedford, Greensburg, Franklin and Brazil. Much interest has been aroused along this line in Marion and the probability is that a charity organization society will be established there soon. There are now twenty cities and towns in Indiana which support organizations of this character. These are: Anderson, Bloomington, Columbus, Evansville, Fort Wayne, Indianapolis, Knightstown, Kokomo, Lafayette, Muncie, New Albany, Peru, Richmond, South Bend, Terre Haute, Greensburg, Bedford, Princeton, Franklin, Brazil. It will be noted that such cities as Logansport, Hammond, Michigan City, Huntington, Elkhart, Connersville and Shelbyville have no local organization of this kind.

New interest in general hospital building has been manifested during the year just closed. The Good Samaritan Hospital was opened in Vincennes on February 11th. This is the latest hospital to be erected under the county hospital act of 1903. It was built and equipped at a cost of more than \$50,000. The public hospital at Bloomington has been found inadequate and is to be enlarged. The Putnam County Hospital Association filed articles of association with the Secretary of State on February 26. The association proposes to establish a hospital at Greencastle. At the City Hospital in Indianapolis an addition has been built. The new Methodist Hospital, located at Sixteenth Street and Capitol Avenue, Indianapolis, was dedicated April 29. A private institution for the treatment of tuberculosis has recently been established on a tract of twenty-two acres of land, about twelve miles west of Indianapolis. It is called the Rockwood Tuberculosis Sanitarium and is owned by some Indianapolis medical men.

It is a pleasure to acknowledge our indebtedness to the public press for its uniform courtesy and for its great help in our work.

The office force is composed as follows: Miss Laura Greely, chief clerk, and Misses Moffett Richards, Mabel Whisner, Anna L. Vesey and Grace P. Hargitt, clerks. The work of the Board for dependent children is carried on by W. S. Reynolds, State Agent, and Mark A. Smith, Miss Mary Carmichael and Miss Leila M. Thomas, agents. I desire to express my appreciation of the faithful work of these assistants.

In closing permit me to thank you for your advice and assistance and for the confidence you have shown in me in many ways.

Respectfully,

AMOS W. BUTLER,
Secretary.

COMPULSORY SCHOOL ATTENDANCE.

The following facts have been gathered from quite full reports received from 108 of the 110 truant officers in the State for the school year 1907-8. The two delinquents are the officers of Clinton and Fayette counties. Nor was a report received from Ohio County. The officer appointed failed to qualify and no work was done.

The 108 officers who have been engaged the past school year in enforcing the truancy law report a total of 26,181 children brought into school through their efforts. These figures indicate simply those who were brought into school by the officers, and not those who attended because the law required them to do so. Of the number reported, 24,673 were placed in public schools and 1,508 in private schools. The salaries of the truant officers amounted to \$32,502.50. Aid was given to 7,506 of the children who came under the care of the truant officers, in order that they might go to school, the reported cost of such aid being \$21,968.01. The aggregate expense of officers' salaries and of aid given the children was but \$54,470.51, making the entire cost \$2.08 for each child brought into school by the officer. The average amount of assistance given to children was \$2.92.

Taking into consideration the large number of children affected, the number of prosecutions under the truancy law was surprisingly small. There were but 289 during the year. Of these 266 were successful and 22 unsuccessful, while one was still pending at the close of the year.

The above figures are summarized in the following tabulated statement:

Number of truant officers	110
Number of days spent in service.....	16,196 $\frac{1}{2}$
Number of visits made.....	66,072
Number of pupils brought into school—	
To public schools	24,673
To private schools	1,508
	<hr/>
Total	26,181
Number of children aided—	
To attend public schools.....	7,294
To attend private schools	212
	<hr/>
Total	7,506

Number of prosecutions—

Successful	266
Unsuccessful	22
Pending	1

Total	289
-------------	-----

Cost of administering the law—

Salaries to truant officers.....	\$32,502 50
Assistance to children.....	21,968 01

Cost per capita for children brought into school.....	\$2 08
---	--------

Cost per capita of assistance given.....	2 92
--	------

THE COUNTY POOR ASYLUMS.

Why are there practically twice as many men as women in the county poor asylums? In a total population of 3,278 on August 31, 1908, the men numbered 2,167 and the women 1,111. In some counties nearly all the inmates are men. In Carroll County there are 17 men and 2 women; in Cass, 41 men and 4 women; in Jasper, 13 men and 3 women; in Newton, 7 men and 1 woman; in Porter, 15 men and 3 women; in Tipton, 14 men and 3 women. There are but eleven counties in the State where these conditions do not exist, and even in these the number of women is but slightly in excess of that of men. The Adams County Asylum has 18 women and 16 men; the Bartholomew County, 13 women and 11 men; in Fayette, 13 women and 7 men; in Hamilton, 20 women and 19 men; Hancock, 9 women and 6 men; Lagrange, 6 women and 5 men; Madison, 25 women and 22 men; Morgan, 17 women and 16 men; Ohio, 2 women and 1 man; Pike, 12 women and 9 men; Scott, 7 women and 4 men.

These facts have been culled from the records of the Board of State Charities, to which every poor asylum in the State sends each quarter a report containing the name and something of the history of each inmate received. A striking thing in connection with these institutions is the slight change from year to year in the number of inmates. A glance through the records of the past fifteen years will disclose the fact that the population has remained practically stationary. This becomes surprising when we realize that in the same period the population of the State has increased from 15 to 20 per cent.

The number of inmates on August 31st of this year is an increase of 113 over the population on the same day of the preceding year and is in fact the highest number reported for that day for the past twelve years. Classified by age, 1,621, or nearly one-half the population, are sixty years of age and over. There are 40 under seventeen years. Those between the ages of seventeen and sixty, which is usually the productive period, are practically all incapacitated in some way. Of the entire number of inmates, 1,588, or almost one-half, are insane, feeble-minded or epileptic. In the remaining 1,690 there are 1,606 who are paralyzed or crip-

pled, deaf, blind, sick or feeble through old age, while only 84 are reported as being able-bodied. These figures show plainly that shiftless, able-bodied paupers are not being housed at the expense of the public, but that the asylums are being legitimately used for the care of those needing their protection. It is indeed unfortunate that so many insane and epileptic must be cared for in these institutions, but until the State makes increased provision for them in State institutions there is no other place for them.

We lack hospital facilities for the care of the sick and invalids in most of the poor asylums. In the larger counties, at least, there is need of trained nurses to care for hospital cases.

With but few exceptions, all the poor asylums in the State have been visited during the past year by a representative of the Board of State Charities or by the various Boards of County Charities, and reports of these visits have been or will be published by the Board. The Board has been gratified to learn of the better conditions found in a majority of the counties; yet in many there are serious defects to be remedied and in others radical changes to be made before it can be said that Indiana is doing her full duty toward those who must seek the shelter of the county poor asylum.

Among the worst poor asylums in the State are those in Spencer, Harrison, Daviess, Shelby, Clay, Carroll and Lake counties. As an example of especially bad conditions, Warren County may be cited. Last winter this institution was not heated. It is provided with a heating plant, but this for the sake of economy was not used. Water stood a foot deep in the furnace room, and the rooms above could not be used because of dampness. The only light at night came from one oil lamp in the dining room. The three bath tubs in the building had no attachments and the inmates did not bathe. The food was very poor and only two meals a day were served. Rats infested the place and various things had to be weighted down to prevent their being carried off.

Many of these wretched old asylums are in the hands of superintendents who want to do the right thing, but find it impossible because of the lack of facilities and of interest and support on the part of higher authorities in the county.

In happy contrast to the asylums just mentioned are those in St. Joseph, Porter, Marshall, Adams, Madison, Parke, Henry, Kosciusko, Benton, Orange, Clark, Dubois, Posey and some other counties. These institutions are intelligently administered and

well kept. They are clean and home-like. The care of the inmates is the first consideration.

On the whole, the tendency throughout the State is toward a higher standard of management. Under a wise provision of law, all plans for new buildings must be submitted to the Board of State Charities and this is resulting gradually in buildings planned according to the best ideas of modern asylum construction. The law of 1899, providing for more business-like methods of management and for a two-year term of office for the superintendent, is also proving most salutary. Too much credit can not be given the various Boards of County Charities, whose duty it is to visit and inspect these institutions and to keep the public informed, through the press, of their actual condition.

REPORTS OF VISITS TO POOR ASYLUMS.

Franklin County Poor Asylum, Brookville. Visited October 4, 1907. A. J. Shriner, superintendent. The superintendent's family consists of his wife and two children. The population at this time is 33,—20 males and 13 females, five of whom are insane. There is a garden of seven or eight acres, which is fairly good, also an orchard, a few grapes and plenty of blackberries. The sexes are separated, there being a separate building for the men. They also have separate dining rooms. The main building was clean, but in the men's building the floors and some of the beds were dirty. Both departments were infested with bugs. The inmates varied in cleanliness. There are no bath tubs, but the inmates bathe every Saturday in wash tubs. There is ample clothing for the summer, but the winter supply has not yet been purchased. The bedding consists of straw ticks, sheets, blankets and some comforts. In the women's department feather beds are used. The beds are mostly of iron. Kerosene lamps are used for lighting and steam for heating. The ventilation is from the windows and doors. The food served consists of pork, beef, (or chicken on Sunday), home-made bread, and mush in cold weather. There are not enough vegetables furnished the inmates. The health of the inmates is generally good. A physician is employed for the poor asylum and the orphans' home. Some reading matter is furnished. Religious services are not held. There is a new record, which is well kept.

The main building of the poor asylum is a one and two-story brick, metal-roofed structure and the men's building is also two

stories with a metal roof. The buildings are old, but were repaired this year. A new ceiling and new floors were put in the men's building. It is our understanding that an appropriation has been made for new bath tubs in both the department for men and for women. The condition of the farm buildings is fair, although some painting is needed. The fences are in poor condition. New cement walks are needed.

Greene County Poor Asylum, Bloomfield. Visited November 16, 1907. William Harrington, superintendent. The salary of the superintendent is \$600 per year. The commissioners furnish everything but one team and a wagon. The farm consists of 200 acres of bottom land one and one-half miles away, and 24 acres at the institution. One hundred and fifty acres are tillable and ten acres are in timber. There is a garden of five or six acres which supplies sufficient vegetables for immediate needs. There is a small orchard but no fruit this year. On the farm are 7 head of cattle, 4 horses (two of which belong to the superintendent) and 60 head of swine. The population at this time is 21,—11 men and 10 women. One man and one woman are reported insane. They are kept in a screened room. The insane man and one man who is an epileptic are locked up at night. There is poor provision for sex separation. The house and inmates were generally clean. There are no bath tubs. The inmates bathe when they are received and once a week in summer and every two weeks in the winter. Their clothing is ample and clean. Standard bedding is used. Iron beds of an old pattern are in use. Most of them are double. Kerosene lamps are used for lighting and a furnace for heating the institution. The ventilation comes from the windows and doors. One of the inmates does the cooking for the institution. The food served consists of pork, frequently chicken, home-made bread, vegetables and fruit and occasionally mush. Supplies are bought by competitive bids. The health of the inmates is generally good. One inmate is sick at this time. A physician is employed at \$100 per year. Reading matter is furnished the inmates and occasionally religious services are held. One of the inmates is a Methodist preacher and sometimes he holds services. The record is an old one but is well kept. Tramps are received only on the order of the township trustee.

The poor asylum is a two-story brick, metal-roofed structure, with a one-story frame building in the rear. The buildings are old, the walls cracked, the woodwork opened, the window shutters

off and the floors worn out. The farm buildings are in fair condition, as are also the fences. The door yards are neat and attractive. A new institution is needed. Until then, the roof should be repaired. Some easy chairs, electric lights, water and bathing facilities should be provided.

Hamilton County Poor Asylum, Noblesville. Visited July 8, 1908. J. T. Hubbard, the superintendent, receives \$800 per year for his services. The county commissioners furnish the help of one man and two women. There are 210 acres in the farm, all tillable. The land is good and there is a garden sufficient for the inmates. There are also a few small fruits.

The population of the poor asylum at this time was 22. The capacity is 30. Four of the men and two of the women are insane, it being necessary to keep one man and one woman locked up at night. The sexes are well separated and the house and inmates are both clean. There are bath tubs for the women but the men bathe in wash tubs. Bathing occurs once a week. The bedding is changed once a week. In most cases the straw ticks used were clean. Coal oil lamps are used to light the institution and steam to heat the building. It is satisfactory. In the new building the ventilation is good, but it is poor in the old structure. An inmate does the cooking. The food served consists of fresh and salt meat, wheat and corn bread, vegetables and fruit in season. In the winter mush is often served for supper. The supplies are bought by competitive bids.

There have been three deaths at the poor asylum recently and at this time there are three of the inmates sick. Reading matter is supplied and religious services are held every Sunday afternoon. Complete records are kept. Tramps are received on the order of the township trustee.

The new addition to the poor asylum is in fair condition but the old part is poor. The farm buildings, fences and door yards are in fair condition. The institution needs a bath room for the men and better care of the sick and helpless. One man who is paralyzed and insane, is kept in an outside building cared for by two feeble, old men inmates. He was in a filthy condition, completely covered with fleas. Another very sick man was in a dark hallway, without light or ventilation. Two other sick men were in one little room, poorly ventilated.

The house and inmates are as well cared for as one woman with only one helper can do.

Marion County Insane Asylum, Julietta. Visited December 11, 1907. Mr. B. M. Morgan, superintendent. The commissioners furnish everything. The farm consists of 147 acres and there are 15 cows on the place. At this time the population was 204,—142 men and 62 women. The sexes are separated. The house and inmates were fairly clean. In the women's dining room, white cloths over torn and dirty oil-cloths were used, under which were many roaches. The seclusion cells on the first floor were soiled, but the superintendent said they had not had time that morning to scrub them. Several beds were sodden from human waste. The floors are not oiled and are frequently scrubbed, those in the rooms of the more untidy patients every day. Consequently they are warped and unsanitary. They should be dried and oiled. The inmates bathe frequently, some daily and some weekly. They have ample clothing. The bedding consists of mattresses and is standard. Straw ticks are needed. The furniture consists of iron beds and some chairs. Electric lights are used for lighting purposes and steam for heating. The latter is good. The ventilation is from galvanized iron ducts to the attic, and from some broken registers. The food served for dinner on the day of this visit was kraut, pork, turnips, corn and wheat bread, and milk. It was good and ample and well prepared. The health of the inmates is generally good. Few were in bed. A physician is employed and he resides at the institution.

A record of the inmates is kept and a watch clock is used. The building is a two-story brick, slate roof structure, well planned, but the workmanship is poor, especially the brick and woodwork. There are two day attendants for the men, also two day attendants for the women, making four attendants for 204 persons, an average of more than fifty persons to an attendant. Under such conditions, it is impossible for the inmates to receive the care they need.

The building should be cleaned, the woodwork refinished and the floors filled. The farm buildings, fences and door yards are in fair condition.

Putnam County Poor Asylum, Greencastle. Visited June 5, 1908. The superintendent, H. W. Stewart, receives a salary of \$600 per year, and there are three in his family. The county commissioners furnish the help of one woman and two men. There are 210 acres in the farm, 160 of which are tillable. The land is poor. There is also a garden of three-fourths of an acre and an orchard.

which this year is poor, but there are some cherries and peaches. The estimated net annual expenses, besides products, are \$3,000. The stock consists of 22 cattle, 10 cows, 5 horses and 86 swine.

The capacity of the poor asylum is 60, with a population of 44. Two of the inmates, one man and one woman, are insane and it is necessary to lock them up at night. The separation of the sexes is not as good as it might be. The house and inmates were fairly clean. The inmates use wash tubs for bathing, but they do not bathe regularly or often. They change their underclothing once a week. The bedding is fairly clean. Oil lamps are used to light the poor asylum and steam to heat the building. The ventilation is not very good. One of the male inmates does the cooking. The food served consists of salt meat and eggs mostly, with vegetables and fruit in season. Mush is occasionally served. Supplies are bought by competitive bids. The health of the inmates is good.

The institution needs repairing and fire protection is needed. The closets should be removed from the building and a bath room provided.

A woman eighty-nine years old was kept in the jail department with the lower type of men because she did not keep her room suitable to present to visitors. The sick and aged inmates who are helpless do not have the care they should have. This is due to insufficient help and a lack of modern conveniences.

Tippecanoe County Poor Asylum, Lafayette. Visited September 15, 1908. The institution is located five miles north of Lafayette. It is in good condition and the inmates are well cared for by the superintendent and the matron, his wife. The farm consists of 220 acres of which 183 are tillable and 37 are in timber. The quality of the land is poor. There are 14 cows, 10 horses and 150 head of swine on the farm. There is a good garden, also a good fourteen-acre orchard. The capacity of the institution is 150, with a population at this time of 75, thirteen of the men and thirteen of the women being insane. It is necessary to keep all of the insane locked up at night. They are kindly treated. One woman is a very low grade idiot and one or two of the men are helpless. The sexes are separated by brick walls. The house and inmates were found very clean. There are three bath tubs, two in the department for men and one in the women's department. The inmates bathe once a week or oftener if need be. They are supplied with clean, warm clothing and their bedding is also very

good. Good furniture was found in the women's ward but that in the department for men is old and poor. Lamps are used in the dining-room and candles in the other rooms for lighting purposes. There are no lights in the halls and corridors. A lighting plant is needed. The steam heating apparatus is in satisfactory condition. The institution depends upon the windows for ventilation. Meat is served once a day to all the inmates, those who work having it three times a day. The dinner on the day of our visit consisted of boiled corned beef, potatoes and bread. The superintendent, with the assistance of an inmate, bakes the bread. A physician calls when needed and he receives a salary of \$300 per year. No religious services are held. Magazines are furnished the inmates who can read. Thorough records are kept.

The buildings are constructed of brick. The water supply is good. It comes from a driven well, 120 feet deep. The superintendent's residence is an old frame building away from the asylum proper, but he and his wife sleep in the department for women. He should have a better residence. The farm buildings, fences and door yards are in good condition.

There are too many insane persons in this institution. The provision made for them is ample but they cannot receive medical care or proper attention. An inmate has charge of the men. The matron looks after the women.

REPORT OF VISITS BY A. R. CHARMAN.

Adams County Poor Asylum, located two miles southeast of Decatur. Visited July 15, 1908. J. R. Graber, the superintendent, receives \$1,000 annually for his services. The commissioners hire one man and two women. The superintendent's family consists of himself, wife and five children. There are 270 acres of land in the farm, valued at \$100 per acre. Of this, 250 acres are tillable and 20 acres are in timber. The garden is good and there is an orchard and some small fruits. The estimated annual expenses, besides products, is \$1,400. The stock consists of 40 head of cattle, 12 cows, 11 horses and 27 head of swine.

The capacity of the poor asylum is 150, with a population of 37 at this time. One insane woman it is necessary to keep locked up at night. There are separate quarters for the insane, which are light, airy and clean. The sexes are well separated, being in different parts of the building. The house is remarkably well kept and the inmates are very clean. There are five bath tubs and the

inmates bathe weekly. There is plenty of good, clean clothing for the inmates, made by the matron. The bedding, consisting of straw mattresses, blankets, comforts and white spreads, is in excellent condition. Wooden chairs and rockers in the women's sitting room, compose the furniture. The poor asylum is lighted by kerosene lamps, heated by steam and the ventilation comes from the windows. Plenty of good, wholesome food, well prepared, is served and the health of the inmates is generally good. A physician is employed at a salary of \$150 per year. Religious services are held regularly every two weeks and an effort is made to furnish such reading matter as the inmates desire. The records are in good shape.

The building is constructed of brick, iron and wood, with a slate roof. The walls are of brick throughout but unplastered. The main buildings are in excellent condition. The farm buildings have recently been repaired and are in good condition, also the fences and door yards.

The institution is a splendid example of its kind. It is well planned and well built to meet in an efficient way the needs of such an institution. To improve conditions a baking oven and laundry machinery are needed. The superintendent and his wife and daughter are much interested in the work and the people are contented and show high regard for those in charge.

Brown County Poor Asylum, located one quarter of a mile east of Nashville. Visited September 12, 1908. The superintendent, George Kritzer, receives \$365 per year for his services. His family consists of one child. He furnishes his own living rooms. The farm contains 260 acres, valued at \$15 per acre, of which 185 acres are tillable and 75 in timber. The stock consists of 13 head of cattle, 14 cows, 4 horses and 15 head of swine. The garden of about an acre is fairly good, and there is a small orchard, but no small fruit.

The capacity of the poor asylum is 30, with a population of 11. The sexes are kept in different parts of the building. The house is moderately clean and the inmates fairly so. There is one bath tub but it is dismantled and cannot be used. The inmates bathe weekly. They have enough clothing and it is in fairly good condition. Straw mattresses, comforts and blankets constitute the bedding. It is in fair condition but they have a hard fight with bugs. There is not much furniture, but what they have is good. Oil lamps are used to light the institution and a furnace supplies

the heat. The pipes in the basement should be covered. There is good ventilation from the windows. The matron does the cooking. Meat is served three times a day, wheat and corn bread, vegetables and fruits in season, butter, milk and tea or coffee all the time and occasionally mush. Supplies are bought by competitive bids. The health of the inmates is very good. A physician is employed at a salary of \$28 per year. Religious services are not held but reading matter is furnished the inmates. The records are carefully kept. Tramps are received only on the order of the township trustee.

The poor asylum is constructed of frame, with slate roof. It is poorly arranged, most of the rooms for the inmates being on the second floor. The women are on the first floor. The buildings are in fairly good condition, as are also the farm buildings, fences and door yards. The institution needs a new bath tub and hot and cold water for its use restored. The pipes are already there. The house should be painted. While the building is a comparatively new one, it is all of frame and illy arranged for its purpose. It is in the hands of well-meaning people, but they do not know much about institutional work. They are industrious and are trying hard to do the right thing. The institution is in keeping with everything in the community.

Cass County Poor Asylum, located near Logansport. Visited June 26, 1908. Frederick Homberg, superintendent. The farm consists of 200 acres of good land, valued at \$100 per acre, of which 125 acres are tillable. There is an orchard and some small fruits.

The capacity of the poor asylum is 50, with a population of 44. The sexes are separated, being kept in different parts of the building. The house was in good condition, although at the hour of visitation it had not been swept and the floors were not very clean. The inmates were as clean as could be expected, considering that many of them had been out in the garden at work or on the farm. There are four bath tubs and the inmates bathe once a week and oftener if they so desire. The clothing for the inmates was sufficient in quantity and in good condition. Straw mattresses, cotton blankets, sheets and white spreads constitute the bedding. It, too, was reasonably clean. The poor asylum is lighted by kerosene and heated by steam. The ventilation comes from the windows. The food served is plenty, of good quality and well prepared, and the health of the inmates is good. No religious services are held.

The building is old but is in fairly good condition and is being gradually put in good shape. There is a new commodious barn for the horses and cattle. The other farm buildings are old and about worn out. The fences and door yards are in excellent condition. The institution needs a new oven for baking, as the old-fashioned brick oven is about worn out. The poor asylum is in the hands of an excellent superintendent and matron. The inmates are well housed and cared for and the premises are well looked after.

Clark County Poor Asylum, located two miles south of Charlestown. Visited August 11, 1908. Joseph L. Carr, the superintendent, receives \$500 for his services and the commissioners pay for the help of one man. The superintendent's family consists of three children. The farm contains 110 acres of moderately good land, valued at \$80 per acre, all of which is tillable. The garden covers five acres and there is an orchard and some small fruits. Last year the estimated net annual expenses, besides products, was about \$2,800. There are 9 head of cattle, 7 cows, 3 horses and 33 head of swine on the farm.

The capacity of the poor asylum is 50, with a population of 27, of whom one woman and four men are insane. The sexes are kept in different parts of the building and the house and inmates were both clean. There are five bath tubs and the inmates bathe once a week or oftener if they so desire. They have plenty of good clothing. The bedding, also, is in good condition and there is a sufficient quantity. The furniture is all new. Oil lamps are used to light the institution and hot water furnishes the heat. The ventilation comes from the windows. The cooking is done by the matron with the help of one woman. The food consists of meat, bread, fruits, vegetables and mush. Supplies are bought by competitive bids. The health of the inmates is generally good. A physician is employed. No religious services are held but some reading matter is furnished. Tramps are received only on the order of the township trustee.

The building is new and constructed of brick. The walls are unplastered, the floors are of wood and the roof of slate. It is in good condition, also the farm buildings, fences and door yards.

A building containing cells for the insane and quarters for the incorrigible is badly needed. It has been proposed to use a part of the old building, but it is not in the right place and is not suitable. The drainage should be changed and a cistern pro-

vided. The heating plant never can render good service until the pipes in the basement are covered with asbestos and the joints are made tight. The water tanks are bad and should be improved. The drain from the building is an open ditch. This should be improved with tile or some other good arrangement. The institution is well cared for.

Crawford County Poor Asylum, located eight miles southeast of English. Visited September 15, 1908. H. H. Grant, the superintendent, receives \$456 per year and he furnishes his own living rooms. The commissioners pay for the services of one man and one woman. The superintendent's family consists of one child. The farm contains 272 acres of land, valued at \$30 per acre, 190 acres of which are tillable and 82 acres are broken and timber land, very hilly and unsuitable for cultivation. The two-acre garden is poor on account of the continued dry weather. The orchard covers several acres and is fairly good. There are also some cherries and plums. On the farm are 24 head of cattle, 9 cows, 7 horses and 41 head of swine.

The capacity of the poor asylum is 15, with a population of 10. The sexes are separated only in the sense that they occupy different rooms. The house was not very clean, due partly to the scarcity of water. The inmates were fairly clean. There are no bath tubs, but the inmates bathe weekly. They have plenty of good clothing in good condition. The bedding consists of straw mattresses, blankets, sheets and comforts, all in fair condition. There are bugs in the institution, but effort is made to keep them out. There is little furniture that is good. The institution is lighted by oil lamps, heated by stoves and has fairly good ventilation from the windows. A woman is hired to do the cooking. Meat is served always once and sometimes twice a day. The other food is wheat and corn bread, all kinds of fruits and vegetables in season and frequently mush in winter. Supplies are not bought by competitive bids. The health of the inmates is quite good. No physician is employed. Religious services are seldom held. Some reading matter is furnished. The records are carefully kept. Tramps are received, except in extreme cases, only on the order of the township trustee.

The part of the building used as the superintendent's residence is an old frame dwelling house, with a worn-out shingle roof. The inmates' part is a one-story frame building with tin roof. The farm buildings, fences and door yards are in fairly good condi-

tion. There should be a new roof on the superintendent's house and on the barn: also various repairs should be made, such as painting, white-washing, etc. The superintendent is an excellent young man who does all he can under the circumstances. The institution has none of the modern conveniences and is not arranged well for the care of the people there.

Dekalb County Poor Asylum, located two miles northwest of Auburn. Visited September 3, 1908. S. M. Brown, superintendent. The salary of the superintendent is \$365 and of the matron \$300 per year. The commissioners furnish everything and also pay for the services of two men and three women. The farm covers 320 acres of moderately good land, 260 acres of which are tillable and 60 acres in timber. It is valued at \$100 per acre. There is a very good garden of about seven acres and an orchard of eight acres which is declining. There is very little small fruit. The stock consists of 30 head of cattle, 14 cows, 8 horses and 70 head of swine.

The capacity of the poor asylum is 40 and the population 36. One man and three women are insane, three of whom it is necessary to keep locked up at night. The sexes are kept in different parts of the building. The house and inmates were very clean. There are no bath tubs but the inmates bathe every two weeks. Their clothing is sufficient and in good condition. Straw mattresses, sheets and quilts or comforts comprise the bedding, all of which was in excellent condition. The furniture consists of wooden chairs and a number of rockers, most of which are well worn. Oil lamps are used to light the institution and four rooms are heated by a furnace. Stoves are used in other parts of the building. The ventilation is fairly good. The cooking is done by women who are paid for their services, under the direction of the matron. Meat is served once a day. The other food consists of wheat and corn bread, butter every meal, milk, coffee and vegetables and fruit in season. Mush is frequently used. Supplies are bought by competitive bids. The health of the inmates is good. A physician is employed. Religious services are occasionally held. The records are carefully kept. Tramps are received only on the trustee's order, although one may occasionally be taken in in an extreme case.

The building is an old, worn-out structure. The sanitary condition is as good as is possible under the circumstances. A new brick building will be ready for occupation in a few weeks and

the institution will be in excellent condition in the new plant if it is finished and equipped as it should be. The furniture is to be new. If the laundry and kitchen is equipped with modern appliances it will be in good shape for many years. The poor asylum is at present in charge of an efficient superintendent and matron.

Delaware County Poor Asylum, located four and one-half miles east of Muncie. Visited September 21, 1908. A. W. Clark, the superintendent, receives \$800 per year for his services. His family consists of one daughter. He furnishes his living rooms, the horses, harness and wagons. An appropriation of \$365 is made for hired help. There are 197 acres of land in the farm, of which 157 acres are tillable and 40 acres in timber. The land is moderately good, valued at \$100 per acre. The garden, covering about six acres, is good and there is an orchard of three or four acres and a good variety of small fruits. There are 13 cows on the farm.

The capacity of the poor asylum is 75, with a population at this time of 50. The sexes are completely separated in different parts of the building. The house and inmates are very clean. There are six bath tubs and the inmates bathe once a week. They have a sufficient quantity of clothing and it is in good condition. The bedding consists of straw mattresses, sheets, blankets, comforts and spreads, all in good condition. The furniture is all good, consisting of rockers and wooden chairs in the sitting rooms and some rockers in the women's sleeping rooms. The institution is well lighted and ventilated by windows. Electricity is used for lighting and steam for heat. A woman is hired to do the cooking for the inmates. Meat is served once a day. The other food served is wheat and occasionally corn bread, vegetables and fruits in season and occasionally mush. Supplies are not bought by competitive bids. The health of the inmates is very good. A physician is employed. Religious services are occasionally held and plenty of reading matter is furnished the inmates. Tramps are received only on the order of the township trustee.

The asylum is a brick structure, well arranged. The roof is of slate. There is a separate cell house for the insane. The buildings are all in good condition, the woodwork and walls having been recently painted. The farm buildings, fences and dooryards are also in good condition.

This is one of the better institutions in the State and the superintendent and the matron deserve high commendation for the splendid manner in which they care for the inmates.

Fayette County Poor Asylum, located just outside the limits of Connersville. Visited September 19, 1908. The superintendent, G. A. Ostheimer, receives \$700 per year and his wife, the matron, receives \$200 per year. They have four children. The commissioners allow \$300 for help. The land, consisting of 140 acres, is good, valued at \$100. It is all tillable. The garden covers about five acres and is good. There is a fair orchard of about one acre and not much variety of small fruits. The stock consists of 12 head of cattle, 8 cows, 4 horses and 74 head of swine.

The capacity of the poor asylum is 30, with a population of 21. Two of the women inmates are insane, one of whom is able to do some work. The separation of the sexes is not complete, although they occupy different parts of the building. The house is fairly clean under the conditions and the inmates are clean. There is one bath tub in the wash house for all inmates and one for the superintendent's family. The inmates bathe weekly. They have sufficient clothing, all in good condition. The bedding consists of straw mattresses, sheets, blankets and comforts, all in fair condition. In spite of desperate efforts to keep free from bugs, some are to be found. The furniture is fairly good, although part of it is very poor and badly worn out. Oil lamps are used to light the institution and stoves for heating purposes. The windows furnish the ventilation, but it is not very good in a part of the building. The cooking is done by the inmates under the direction of the matron. Meat is served at least once a day, wheat and corn bread, butter twice a day and all kinds of vegetables in season. Mush is not used much. The supplies are bought by competitive bids. The health of the inmates is very good. A physician is employed at \$60 per year. Religious services are held about once a month and some reading matter is furnished. A new record book has just been purchased. Tramps are not received except on the order of the township trustee.

The main building is constructed of brick, with a metal roof. The wash house is of brick, but the other small buildings are frame. The buildings are in bad condition all through. The walls are bad. The floors worn out. The farm buildings, fences and door yards are all in good condition. A new building is really needed. If the old one is remodeled it needs closets, bath tubs, sewer with water plant or connection with the city plant, a lighting plant and general repairs. The superintendent and his wife are doing as well as can be expected under the conditions. They

seem anxious to do the work well. The sex separation cannot be what it should be in this building.

Floyd County Poor Asylum, located two and one-half miles north of New Albany. Visited September 17, 1908. The superintendent, J. P. Bence, receives \$500 per year for his services, and he furnishes his living rooms. He has one child. The commissioners pay for the help of three men and one woman. The farm, consisting of 160 acres of land, is valued at \$100 per acre. One hundred and thirty acres are tillable and thirty acres are broken hills and in timber. The garden is good, covering about ten acres. There is also a five-acre orchard, which is good, and a good variety of small fruits. On the farm are 9 head of cattle, 8 cows, 5 horses and 40 head of swine.

The capacity of the poor asylum is 100 and the population at this time was 58. Eight men and six women are insane. Six of these it is necessary to keep locked up at night and two are able to do work about the institution. The sexes are kept in different parts of the institution, the women on the first floor and the men on the second floor. The house is very clean although the building is old and water is very scarce this summer. All the inmates that it is possible to keep clean, were reasonably so. There are three bath tubs for the use of the inmates and they bathe once a week or oftener if they so desire. Their clothing is sufficient in quantity and in fairly good condition. The bedding, consisting of straw mattresses, sheets, blankets and spreads, is all in fairly good condition. There are no bugs. Most of the furniture is fairly good. It consists of wooden chairs and some rockers. The poor asylum is lighted by oil lamps and heated by steam. The steam plant is in good condition. There is good ventilation from the windows and the cell house has three roof ventilators. The cooking is done by a former inmate who is hired for the purpose. He is quite efficient. Meat is served twice a day. The other food consists of wheat and corn bread, butter from once to four times a week, all kinds of vegetables and fruit in season. Mush is not served, as the inmates do not wish it. Supplies are purchased by the superintendent without competitive bids. The health of the inmates is generally good. A physician is employed at \$300 per year. Religious services are held every two weeks and some reading matter is furnished. The records are carefully kept. Tramps are not received unless on the order of the township trustee.

There are four separate buildings at this institution: the superintendent's residence of frame, a two-story frame building for the negroes, the cell house of brick with stone floor and tin roof and the main building of brick with tin roof. The building for negroes is an old, worn out place and an eye-sore. The cell house is in excellent condition. The main building needs to have the walls patched and painted. The farm buildings, fences and door yards are all in good condition.

The plastering needs repairing and the walls should be painted; a laundry equipment is needed and the building for colored people should be torn down and replaced by a new one. The poor asylum is well cared for and well managed. While the sex separation is very far from what it should be, I see no way to make it better with the present building. The superintendent assured me that he watches the matter closely.

Fountain County Poor Asylum, located three and one-half miles north of Covington. Visited August 28, 1908. The superintendent, George A. Law, receives \$720 per year for his services. A new superintendent is soon to take charge. The commissioners pay for the services of two men and two women. The farm consists of 275 acres of land, valued at \$100 per acre, of which 270 acres are tillable and 5 acres in timber. The garden of 3½ acres is not very good on account of the drought. The orchard covers about two acres and there is an abundance of small fruits. The stock consists of 35 head of cattle, 12 cows, 8 horses and 80 head of swine.

The capacity of the poor asylum is 70, with a population at this time of 35. Two men and two women are insane, one of whom it is necessary to keep locked up. The sexes are kept in different buildings. The house is fairly clean. It is kept about as well as conditions will permit. The inmates, too, are clean. There are five bath tubs, four of which are for the inmates and they bathe weekly. They have enough clothing and it is fairly good. There are all kinds of bedsteads, on which are straw mattresses, sheets, and blankets, all in good condition. There are wooden chairs and some rockers, many of which are worn out. Oil lamps light the institution and steam from a good plant furnishes the heat. The ventilation comes from the windows. A woman is hired to do the cooking under the direction of the matron. Meat is served three times a day. Wheat bread is used mostly, corn bread occasionally, all kinds of vegetables and fruits in season. Mush is

not often used as it is difficult to get meal. The supplies are bought by competitive bids. The health of the inmates is generally good and a physician is employed at \$150 per year. No religious services are held, but reading matter is supplied for those who can read. The records are carefully kept. Tramps are received only on the trustee's order.

The institution has two parts,—the old part of brick, with plastered walls and tin roof, and the new part, also of brick, covered with slate, with no plastering except on the ceilings. The old building needs repairing very much, such as new floors, plastering and painting. The farm buildings are very poor. They are old and out of repair. The fences are fairly good and the front yard is nicely kept. A laundry equipment is badly needed, also electric lights. There are bugs, although the management has tried hard to exterminate them. A heroic effort is made to keep the institution in good shape, but this is very difficult on account of poor facilities and the condition of the building. The County Council is slow to make the necessary appropriations.

Harrison County Poor Asylum, located three miles south of Corydon. Visited September 16, 1908. The superintendent, Andrew Stonecipher, receives \$365 per year and furnishes his own living rooms. He has one child. The farm consists of 90 acres of moderately good land, valued at \$50 per acre. Sixty acres are tillable and 30 acres in timber and broken land. The garden of about two acres is good and there is an old orchard, about gone, and a new one started. There is very little small fruit. There are 6 head of cattle, 6 cows, 2 horses and 20 head of swine on the farm.

The capacity of the poor asylum is 20, with a population of 17. The sexes are separated by occupying different stories of the same building. The house is fairly clean under the poor conditions existing. The superintendent is hauling water in order to do some cleaning. The inmates, also, are fairly clean. There are no bath tubs, but the inmates bathe once a week. They have plenty of good clothing. The bedding, consisting of straw mattresses, blankets, sheets and comforts, is in fair condition. There is a scant supply of furniture, not in very good condition. Oil lamps are used to light the poor asylum and a furnace supplies the heat. The furnace is good but is not large enough. The ventilation comes from the windows. The cooking is done by the inmates. The food consists of meat once a day, wheat and corn bread.

butter when it is on hand, all kinds of vegetables and fruits in season and occasionally mush. Supplies are bought by competitive bids. The health of the inmates is quite good. A physician is employed. Religious services are not held but some reading matter is furnished. The records are carefully kept. Tramps are received on the order of the township trustee.

The buildings are all constructed of frame, covered with tin. The residence is a separate building. The kitchen and dining room for inmates is separate, perhaps 100 feet from the two-story building in which they sleep. There is another old building in which one or two inmates sleep. The residence is a fairly good building but the kitchen and dining room for the inmates is a disgrace. The building in which the inmates sleep is in fairly good condition except that it needs varnish, paint, etc. The farm buildings are fair, as are also the fences. The door yards are in bad condition. New walks are needed, a new dining room and kitchen should be built and properly screened and there should be a good well with water connection in the buildings. The main building needs painting.

This is a very poorly arranged plant. It is neither suited to its purpose, nor properly equipped. The superintendent and his wife seem to be doing all they can to care properly for the people in the institution.

Howard County Poor Asylum, Kokomo. Visited September 9, 1908. The salary of the superintendent, P. H. W. Haynes, is \$800 and he furnishes all help. His family consists of one child. The farm contains 155 acres, of which 143 are tillable and 12 in timber. The land is worth \$200 per acre. There are about 5 acres in garden and 7 acres in potatoes and the orchard covers about $1\frac{1}{2}$ acres. There are practically no small fruits. The stock consists of 15 head of cattle, 7 cows, 3 horses and 122 head of swine.

The capacity of the poor asylum is 43 and the population was 36, one man and two women being insane. The sexes are completely separated, being in different parts of the building. They are separated by an iron screen partition. The building is kept in excellent condition and the inmates appeared clean. There are six bath tubs for the use of the inmates and one bath tub in the superintendent's residence. The inmates bathe every two weeks. There is plenty of clothing in good condition. The bedding, consisting of straw mattresses, sheets, comforts, blankets and spreads, is in good condition except in one or two instances where it is

impossible. The furniture is fairly good. There are wooden chairs and rockers in most of the rooms. The poor asylum is lighted by electricity and heated by steam. The ventilation, by means of windows, is good. One of the inmates does the cooking. The food consists of meat twice a day, wheat bread and occasionally corn bread, butter every morning when on hand, vegetables and fruit of all kinds in season. Mush is used frequently, especially in cold weather. The health of the inmates is good. Supplies are bought by competitive bids. A physician is employed at a salary of \$145 a year. Religious services are held every two weeks from May until December. The W. C. T. U. furnishes plenty of reading matter. The records are carefully kept. No tramps are received unless on the order of the trustee.

The building is an old brick one, covered with slate. The walls are plastered except in the cell house, which is comparatively new. In most respects the buildings are in excellent condition; also the farm buildings and fences. The door yards are being put in excellent condition. The institution should have new dining room and kitchen, laundry equipment, better means of pumping water and better fire protection, and help should be furnished the superintendent.

The poor asylum is in excellent hands. The superintendent and his wife are both interested in improving and in keeping it in good sanitary condition. They are succeeding gradually with the help of the County Board, in making it a credit to the county.

Huntington County Poor Asylum, located two and one-half miles south of Huntington. Visited September 8, 1908. W. H. Eckman, superintendent. The salary of the superintendent is \$500 per year. His family consists of three children. The commissioners pay for the services of one man and one woman. The farm consists of 203 acres, all of which is tillable. The land is medium in quality and is valued at \$70 per acre. The garden of about two acres is not very good on account of the dry weather. The orchard is large and fine looking and there is a variety of small fruits. There are 8 cows, 4 horses and 30 head of swine on the farm. The capacity of the poor asylum is 50 and the population at this time was 33. The sexes are completely separated. The house and inmates are fairly clean. The superintendent is new and just moving in and there was some confusion in consequence. There are no bath tubs in the building and no regular days for bathing. There is plenty of clothing but it is well worn. There

are no rooms to keep the clothing in. The bedding, consisting of straw mattresses, comforts, sheets and spreads, is in fair condition. The rooms are not all free from bugs. The chairs in the rooms are old and about worn out. Oil lamps are used to light the institution and a furnace and stoves for heating purposes. The furnace is old. Windows furnish the ventilation. The cooking is done by the men, under the direction and oversight of the matron. Meat is served once a day. The other food consists of wheat bread, (seldom corn bread), butter twice a week, coffee, milk, all kinds of vegetables and fruits in season. Supplies are purchased by competitive bids. The health of the inmates is generally good. A physician is employed. Some reading matter is furnished, but no religious services are held. The records are carefully kept. Tramps are received on a trustee's order.

The building is an old brick structure with slate roof, plastered walls and wood floors. It is not very conveniently arranged for its purpose. A general overhauling and repairing is needed. The wash-house is a disgrace. The farm buildings, fences and door yards are fairly good. Bath tubs and closets, a new heating plant and better power for pumping water into the tank should be installed.

Jay County Poor Asylum, located three miles northeast of Portland. Visited July 18, 1908. E. S. Jones, the superintendent, receives \$800 for his services and he furnishes all the horses and wagons and equipment for the living rooms. The commissioners hire two men and one woman to assist. There are 360 acres of good land on the farm, of which 310 acres are tillable and 50 acres are in timber. The land is valued at \$100 per acre. The garden and orchard are good and there are cherries and grapes on the farm also. The stock consists of 21 cows and 73 head of swine.

The capacity of the poor asylum is 50, with a population of 40. One man is insane. There is a separate building for the insane. The sexes are separated, being in different parts of the building. Both the house and inmates are clean. There are three bath tubs and the inmates bathe once a week. Plenty of good clothing is furnished and the bedding is clean and in good condition. Straw mattresses, blankets and spreads are used. There are wooden chairs, also some rockers for the women. The institution is lighted by kerosene lamps, heated by steam and stoves and ventilated from the windows. Plenty of good food, well prepared, is served. The health of the inmates is generally good. A physician is em-

ployed at \$125 per year. No religious services are held, but some reading matter is furnished.

The walls throughout the asylum are of brick, unplastered. The floors are wooden except that in the basement, which is concrete. The roof is of slate. The main building, the farm buildings, the fences and door yards are all in good condition. A large baking oven is needed, also some laundry machinery.

This is an excellent plant in many ways but has a great disadvantage in having the kitchen, laundry, dining rooms and heating plant in the basement of the main building. The management of the institution is good and the inmates seem to be well cared for.

Jennings County Poor Asylum, located six miles south of Vernon. Visited August 15, 1908. M. W. Palmer, the superintendent receives \$400 per year. He has two children. The commissioners pay for the help of two men and one woman. The farm consists of 380 acres of fair land, valued at \$35 per acre, of which 295 acres are tillable and 85 acres are in timber. The garden covers three acres and is good. The orchard is composed of peach and apple trees and there are some small fruits. The net annual expenses, besides products, are estimated at \$1,900 per year. The stock consists of 23 head of cattle, 10 cows, 5 horses and 37 head of swine.

The capacity of the poor asylum is 70, with a population at this time of 23. One woman is insane and epileptic and it is necessary to keep her locked up at night. There is a building apart from the other inmates for the insane. One of the inmates, a girl fourteen years old, is an epileptic and has to be confined all the time. The sexes are kept in different parts of the building and the house and inmates are clean. There are no bath tubs, but the inmates bathe once a week. They have plenty of good clothing. The bedding is fairly good. It consists of feather beds, straw mattresses, quilts, sheets, etc. The beds were not free from bugs. Besides the double iron bedsteads there are wooden chairs in the rooms. Oil lamps and wood stoves are used. The ventilation comes from the windows.

Meat is served twice a day with vegetables, corn and wheat bread, milk and butter most of the time and coffee. The health of the inmates is generally good. A physician is employed at \$150 per year. Religious services are occasionally held and reading matter is supplied the inmates. The records are in good shape.

The main building is constructed of brick with corrugated iron roof and wooden floors. It is not very conveniently arranged. The building is in fairly good condition although some of the floors need repairing. The farm buildings, fences and door yards are in excellent shape. The greatest need is a bath room with a water plant to supply it. The wood stoves are dangerous and a good heating system would be of advantage. There is plenty of good wood. The superintendent is a good farmer and his wife an excellent woman for the house. With a well equipped bath room and a better heating system the institution would be in good shape.

Johnson County Poor Asylum, located one mile south of Franklin. Visited September 11, 1908. The superintendent, Jacob LeVan, receives \$700 per year for his services and his family consists of two children. He furnishes his living rooms and such help as he needs. The farm contains 102 acres of tillable land, valued at \$150 per acre. The garden of about three acres is poor on account of the dry weather. The orchard, also, is poor, but there are some grapes and peaches.

The capacity of the poor asylum is 64, but the population at the time was but 17. One man is insane, but he is able to work about the institution. The sex separation is not complete, but the sexes are kept in different parts of the building. The inmates appear clean. There are two bath tubs in the inmates' part and one in the superintendent's residence. The inmates bathe "when they need it." Their clothing is in good condition and there is plenty of it. The bedding consists of straw mattresses, sheets, blankets and spreads, all in good condition. The furniture consists of straight chairs and some rockers. Oil lamps are used and the asylum is heated by a furnace, stoves and grates. The windows furnish good ventilation.

Two women inmates do the cooking under the direction of the matron. Meat is served twice a day, with wheat and corn bread, butter twice a day, coffee once a day, all kinds of vegetables and fruit in season and frequently mush. Supplies are bought by competitive bids. The health of the inmates is generally good. The physician employed receives \$200 per year for his services and visits the orphans' home and jail also. No religious services are held, but reading matter is furnished. The records are carefully kept. Tramps are received on the order of the township trustee.

This building is constructed of brick, with plastered walls and

a slate roof. It is not well arranged, especially for the separation of the sexes. The building is very good, as are also the farm buildings, fences and door yards. The asylum seems to be in excellent hands and is well cared for. A new cooking range is needed, but I understand this has been promised. The hall might be changed so as to separate the sexes more completely.

Kosciusko County Poor Asylum, located one and one-half miles south of Warsaw. Visited September 5, 1908. A. T. Rockhill, superintendent. His salary is \$1,000 per year. Two children constitute his family. He furnishes the horses, harness and wagons and the commissioners pay for the services of three men and three women. The farm, consisting of 243 acres, is of fair quality, valued at \$70 per acre. Two hundred acres are tillable, 8 acres in timber and 33 acres marsh. There are about 18 acres in vegetables and seven acres of good orchard. There is a variety of small fruits. The estimated net annual expenses, besides the products, are \$6,500. The stock consists of 27 head of cattle, 9 cows and 85 head of swine.

The capacity of the poor asylum is 70 and the population 43. The sexes are completely separated and the house and inmates are clean. There are one or two inmates whom it is impossible to keep clean. There are 6 bath tubs and the inmates bathe weekly. They have plenty of clothing, which is in good condition. This is true also of the bedding, which consists of straw mattresses, cotton blankets, comforts and spreads. A few wooden chairs and cane-seated rockers compose the furniture. The institution is lighted by electricity and heated by steam. The steam plant, however, is about worn out. The ventilation, by windows and doors, is excellent. The cooking is done by paid help. Meat is served once a day. The other food consists of wheat and corn bread, butter all the time when on hand, milk, coffee, vegetables and fruits in season. Mush is frequently served, especially in winter. Supplies are bought by competitive bids. The health of the inmates is good. A physician is employed at \$336 per year. Religious services are occasionally held and reading matter is furnished those who can read. Careful and complete records are kept by an inmate. No tramps are received except on the trustee's order.

The poor asylum is a brick structure throughout, with slate roof. The walls are not plastered. A hall separates the departments for men and women. They are counterparts of each other.

The heating plant is in a separate building and there is also a cell house apart from the other building. Except that it needs paint, the building is in good condition, as are also the farm buildings, fences and door yards.

New bedsteads are needed, also rocking chairs; a new heating plant and a new water plant should be installed. This is about the best planned building I have yet seen and it is well kept. The superintendent and his wife seem greatly interested in the inmates and the inmates seem contented. Having been built about twelve years, the institution is in the stage where it needs certain repairs.

Lake County Poor Asylum, located three and one-half miles east of Crown Point. Visited August 21, 1908. August Neunfeldt, superintendent. The salary of the superintendent is \$450 per year and the commissioners furnish all the help. His family consists of two children. There are 310 acres of land, 240 acres of which are tillable and 70 acres in timber. It is valued at \$80 per acre. The garden covers about two acres. On account of the dry weather it is not very good. There is also a three-acre orchard and plenty of small fruits.

The capacity of the poor asylum is 70 and the population 62. Four men are insane and it is necessary to lock one of them up at night. The sexes are kept in different parts of the building. The house is not kept very clean in some places, but on the whole it is fairly good. There is no gross negligence. The inmates are reasonably clean. There are two bath tubs and the inmates bathe weekly. They have plenty of good clothing and plenty of good bedding. Excelsior mattresses are used on most of the beds. Religious services are held once a month and reading matter is furnished the inmates. Tramps are received on the township trustee's order.

The building is a good brick structure with a shingled roof. The floors are wooden and the walls are plastered. The sexes are fairly well separated. There are large dormitories for men and for women, and a few separate rooms. The buildings are in fairly good condition. The roof is getting old and leaks some. The farm buildings and fences are good. The institution should have a lighting plant. Oil lamps are used mostly, which are both expensive and dangerous. More adequate water facilities should be supplied. Nothing could be done in case of fire.

The poor asylum is fairly well cared for. There is an excellent cell house for the insane, entirely apart from the main building.

The large dormitories seem, for sanitary reasons, a bad plan of construction.

Madison County Poor Asylum, Anderson, located three and one-half miles east of Anderson. Visited July 25, 1908. A. Heagy, the superintendent, receives \$1,020 per year and he furnishes his residence and one horse and buggy. The commissioners pay for the services of one man and two women helpers. The farm covers 212 acres of good land, valued at \$100 per acre. One hundred and ninety-two acres are tillable and 20 acres are in timber. There is a good garden of eight acres, a seven-acre orchard and some small fruit. The stock consists of 35 head of cattle, 12 cows, 5 horses and 100 head of swine. The asylum has a capacity of 100 inmates, but the population at this time is only 45. One man is insane and it is necessary to keep him locked up at night. There is a separate building for the insane. Several of the inmates are partially insane. The sexes are well separated. The house and inmates are very clean considering the condition of the latter. There are four bath tubs and the inmates bathe weekly, or oftener if necessary. They have plenty of good clothing. The bedding is good. It consists of straw mattresses, cotton blankets and white spreads. Religious services are occasionally held and reading matter is given the inmates. The records are well kept.

The asylum is a brick building, plastered inside, with a slate roof and wood floors. The buildings for the inmates are separate from the superintendent's residence. The farm buildings are old but in good condition. The fences and door yards are also well kept. The institution needs better facilities for baking and for laundry work, and another dining room. It is managed and cared for in a very efficient manner and is a good example of the wisdom of retaining competent people in charge of such institutions.

Marshall County Poor Asylum, located two miles east of Plymouth. Visited June 27, 1908. Peter J. Kruyer, superintendent. He furnishes five horses and the harness. The farm consists of 198 acres of good land, valued at \$100 per acre. Of this, 190 acres are tillable and 8 acres in timber. There is an excellent garden, well cultivated, also an orchard and some small fruits. Besides products, the estimated net annual expenses are about \$7,000. The stock consists of 14 head of cattle and 14 cows.

The capacity of the poor asylum is 70, with a population at this time of 49. Three men and one woman are insane but they are all able to work about the institution. The sexes are separated,

being kept in different parts of the building. The house and inmates are clean. There are three bath tubs and the inmates bathe once a week or oftener if necessary. They have plenty of good clothing. The bedding also is good, consisting of straw mattresses, cotton blankets and comforts. The bedsteads are iron. The other furniture consists of wooden chairs and some rockers. The poor asylum is lighted by a Matthews gas machine, heated by steam and ventilated by the windows. Plenty of good, well prepared food is served and the health of the inmates is good. The physician employed receives \$200 per year for his services. Religious services are occasionally held. The records are in good condition.

The building is constructed throughout of brick, covered with slate and the floors are hardwood. It is in excellent condition, as are also the farm buildings, fences and door yards. The laundry should be supplied with modern machinery. This is a well appointed institution and is well managed and cared for by those in charge.

Martin County Poor Asylum, located four and one-half miles northwest of Shoals. S. C. Johnson, superintendent. Visited August 19, 1908. The superintendent receives \$400 per year for his services. His family consists of eight sons. The commissioners pay for the services of two men and one woman. There are 400 acres of poor land, rough and broken. The garden of three or four acres is fairly good and the orchard covering two acres is part old and part new. There is very little small fruit.

The capacity of the poor asylum is 40, with a population of 16. The sexes occupy separate buildings. The house is an old frame building with no conveniences, and it is difficult to keep clean. The inmates are fairly clean. There are no bath tubs and the inmates have no regular time for bathing, although they bathe frequently. There is plenty of fairly good clothing. The bedding consists of straw mattresses, blankets and some quilts. The beds are all double. There is very little furniture and it is not very good. Oil lamps are used to light the building and stoves and open fire places are used for heating purposes. Windows furnish the ventilation. Most of the cooking is done by the inmates under the direction of the matron. Meat is served once a day. The other food consists of wheat and corn bread, milk and butter every day, fruits and vegetables of all kinds in season, oatmeal and rice often and mush in the winter time. Supplies

are bought by competitive bids. The health of the inmates is generally good. A physician is employed at \$1.50 per trip. Religious services are held frequently and some reading matter is furnished. The records are carefully kept. Tramps are received on the order of the township trustee.

This poor asylum is constructed of frame, with a tin roof. There are two buildings,—one in which the superintendent has his residence and in which the women have their apartments. The building for men is one hundred feet or more away from the main building. It is an illy arranged institution and not in very good condition. Apparently, effort is made to keep it properly. At the time of this visit, the beds were being overhauled and scrubbed. The farm buildings and fences are not in good condition. Some improvement in water supply is needed. There is only a large cistern. The house needs repairing but it is not worth spending money on. There is some talk of a new building. While this institution is very poor, I suppose it is better than most of the houses in the county outside of the towns. The woman in charge is excellent for the place. I did not see the superintendent. The inmates seemed to be contented.

Miami County Poor Asylum, located two miles south of Peru. Visited August 1, 1908. The superintendent, Harvey Ellers, receives \$550 for his services and the commissioners furnish the help of two men and two women. There are two children in his family. The farm covers 160 acres of good land, valued at \$100 per acre, of which 155 acres are tillable and 5 acres are in timber. There is an excellent garden, an orchard and some small fruits. The stock consists of 28 head of cattle, 8 cows, 5 horses and 35 head of swine.

The capacity of the poor asylum is 50, with a population of 35. The sexes are well separated, being kept in different parts of both building and premises. The house is throughout a model of cleanliness and the inmates are very clean. There are two bath tubs and the inmates bathe weekly. They have plenty of good clothing in good condition. Straw mattresses, sheets, cotton blankets and white spreads, all in excellent condition, constitute the bedding. Plain wooden furniture is used and rocking chairs are in most of the rooms in the department for women. The poor asylum is lighted by electricity, heated by steam and ventilated by means of the windows. Plenty of good food, well prepared, is served. The health of the inmates generally is good. A physi-

cian is employed. Religious services are held occasionally and some reading matter is furnished.

The poor asylum is an old building of brick and wood, covered with slate. It is in good condition and is fairly well arranged in the main, but has the fault of most of the old buildings,—it has the kitchen and heating plant in the basement. The farm buildings, fences and door yards look well.

This institution is well kept and is the most homelike poor asylum I have yet seen. This shows the wisdom of keeping efficient people, when found, for such places.

Montgomery County Poor Asylum, located one and one-half miles north of Crawfordsville. Matt. B. Davidson, superintendent. Visited August 29, 1908. The salary of the superintendent is \$800 per year and he furnishes his living rooms, teams, wagons and harness. His family consists of himself and wife. The commissioners pay for the services of two men and two women. The farm contains 200 acres of good land, 180 acres of which are tillable and 20 acres broken and untillable. There is a garden of three acres and a good orchard of about four acres. There is an abundance of small fruits. The stock consists of 7 head of cattle, 5 cows and 60 swine.

The capacity of the poor asylum is 75 and the population at this time 58, of whom two men and two women are insane, it being necessary to lock up one man and one woman at night. The sexes are kept in different parts of the building. Everywhere the house is in good condition and the cleanliness excellent. The inmates are also clean. The inmates have 7 bath tubs and they bathe weekly or oftener. Plenty of good clothing is furnished. The bedding consists of straw mattresses throughout, blankets, quilts, spreads and sheets, all in good condition. There are wooden chairs throughout the institution and rockers in all of the women's rooms. Oil lamps are used to light the institution and steam to heat it. The steam plant is in good condition. Good ventilation comes from the windows. The cooking is done by hired help under the direction of the matron. Meat is served twice a day, with fresh beef once a week. Other food consists of wheat and corn bread, butter twice a day, milk all the time, all kinds of vegetables and fruit in season and occasionally mush. Supplies are bought by competitive bids. The health of the inmates is generally good and a physician is employed at \$400 per year. No religious services are held. The records are carefully kept. No tramps are received except on the trustee's order.

The asylum is constructed of brick with slate roof, plastered walls and wooden floors. There are separate dining rooms for the sexes and a separate building for the insane. This latter building is of brick, with unplastered walls and slate roof. The buildings are in good condition, but some of the walls need repainting and the floor in the cell house is a little out of repair. The farm buildings, fences and door yards are good. A well equipped laundry is needed, also a lighting plant of some kind. This is one of the best kept institutions I have visited and is in excellent hands. Everybody seems contented and nearly all co-operate in keeping the place in good order. Both the superintendent and his wife seem much interested in their work and well adapted to give the inmates proper care.

Noble County Poor Asylum, located two miles northwest of Albion. Visited September 4, 1908. Henry W. Kirkpatrick, superintendent. The salary of the superintendent is \$600 per year and the commissioners furnish everything. His family consists of himself and wife. There are 280 acres of good land in the farm, 266 of which are tillable and 14 acres in timber. It is valued at \$100 per acre. There is a good garden of about $5\frac{1}{2}$ acres, an orchard covering about six acres, and an abundance of small fruits. On the farm are 25 head of cattle, 14 cows, 6 horses and 40 head of swine.

The capacity of the poor asylum is 50 and the population 18. One man is insane and it is necessary to keep him locked up at night. The sexes are not separated as they should be. They have separate dormitories and do not eat in the same room, but otherwise they are not kept in separate parts of the building. The house and inmates are reasonably clean. There are two bath tubs, one for each sex, and the inmates bathe once in two weeks. Those who work bathe oftener. The clothing is sufficient and in fairly good order. The bedding consists of straw mattresses, cotton blankets, sheets and spreads, all of which was in fairly good condition and free from bugs so far as could be detected. Wooden chairs, some of which are well worn, and some rockers, comprise the furniture. The institution is lighted by oil lamps and heated by a hot air furnace. The ventilation is good. The cooking is done by a woman who is paid for her services. The inmates have meat twice a day, wheat and corn bread, butter all the time, milk, coffee, vegetables and fruits of all kinds in season, and mush for breakfast every day. Supplies are bought by competitive bids. The health of the inmates is good. Both the superintendent and

his wife were absent and I was unable to find out about the records. Tramps are received only on the order of the trustee.

The building is constructed of brick, with a slate roof and plastered walls, but is poorly arranged. It is in good condition. The barn is new and the fences and door yards are excellent. The institution seems to be well cared for. The main criticism is that the men and women are not completely separated.

Ohio County Poor Asylum, located three and one-half miles west of Rising Sun. Visited August 13, 1908. J. L. Edrington, the superintendent, receives a salary of \$240 per year and furnishes his own living rooms. He has one son. The farm is very hilly and broken. It consists of 102 acres, valued at \$20 per acre. Fifty acres are tillable and the remainder is in timber and pasture. There is a very good garden and a small orchard but no small fruits. The stock consists of 6 head of cattle, 3 cows, 2 horses and 20 head of swine.

The poor asylum has a capacity of 20, but there are only three inmates at this time. The sexes are not well separated. The house and inmates are fairly clean. There are no bath tubs but the inmates are required to bathe once a week. They have plenty of good clothing. The bedding, consisting of straw mattresses, cotton blankets, sheets and spreads, is in good condition. The other furniture consists of plain wooden chairs. Oil lamps are used to light the poor asylum and stoves furnish the heat. The ventilation comes from the windows. The matron does the cooking. Meat is given the inmates three times a day, with wheat and corn bread, vegetables and fruits and occasionally mush. Supplies are bought by competitive bids. The health of the inmates is generally good and a physician is employed at \$20 per year. Religious services are occasionally held and some reading matter furnished. Tramps are received only on the order of the township trustee.

The building is of frame with a tin roof. The roof leaks under all the valleys and has caused much of the plastering to fall off. The farm buildings and fences are fairly good. The first need is to have the roof and plastering repaired. A heating plant is also needed. This institution is situated on a high hill, with a very rough road leading to it. The building is fairly good and if properly repaired would answer the purpose in caring for so small a number of inmates. The superintendent and his wife are keeping the place as well as they can under the conditions.

Pike County Poor Asylum, located four and one-half miles southeast of Petersburg. Visited September 14, 1908. George W. Ward, the superintendent, receives \$500 per year for his services and he furnishes his living rooms and the horses. He has one son. The commissioners pay for the services of one man and one woman, and part of the year furnish an additional man and woman to help. The farm covers 130 acres of poor land, valued at \$30 per acre, of which 95 acres are tillable and 35 acres are in timber. The garden is good, covering about an acre, and there is an old orchard, small and unfruitful. A new orchard is beginning to yield. It covers about $4\frac{1}{2}$ acres. The stock consists of 6 head of cattle, 6 cows and 15 head of swine.

The capacity of the poor asylum is 50, with a population of 21. The sexes are completely separated. Both the house and inmates are clean. There are two bath tubs for the inmates and one for the superintendent's family. The inmates bathe once a week, and they have plenty of good clothing. The bedding is good, consisting of straw mattresses, blankets, comforts and spreads. The furniture is in fairly good condition. Oil lamps are used to light the institution and steam for heating purposes. The building is new. It has ventilating flues in every room and is well ventilated. The matron oversees the cooking. Meat is served once a day, wheat and corn bread, butter three times a day, all kinds of vegetables and fruits in season and occasionally mush. Supplies are bought by competitive bids. The inmates' health is good. Religious services are not held. Reading matter is furnished. The records are carefully kept. Tramps are received when sent by township trustee.

This building has only been in use about a year. Its walls are of unplastered brick throughout and the roof of slate. It is in excellent condition. The farm buildings and fences are fairly good. The door yards are not improved, but an appropriation has been made for that purpose. With an engine for pumping water, a lighting plant and better laundry equipment, this would be a modern, well-equipped asylum. It is well managed and cared for.

Porter County Poor Asylum, located one and one-half miles southwest of Valparaiso. Visited August 24, 1908. The superintendent, Eugene T. Funk, receives \$600 per year. He has one son in his family. The commissioners pay for the services of one man and one woman. The farm consists of 190 acres of poor land. One hundred and seventy-five acres are tillable; the remainder

is swamp and pasture land. The garden covers about one acre and is very poor on account of the dry weather. The orchard, also, is very poor and there is little small fruit. There are 25 head of cattle, 12 cows, 4 horses and 65 head of swine on the farm.

The capacity of the poor asylum is about 100, with a population of 23. Two men are insane, but help about the work. The sexes are kept in the two wings of the building. The house and inmates are clean. There are three bath tubs in the inmates' quarters and weekly baths are the rule. There is plenty of good clothing in first class condition. The bedding, also, is good and there is a sufficient quantity for the different seasons. Single iron bedsteads are used and there are good wooden chairs and rockers in the sitting rooms and in the women's rooms. Oil lamps are used to light the institution and the building is heated by steam. The ventilation comes from the windows. The cooking is done by a hired woman. Meat is served once a day. The other food consists of wheat and corn bread, vegetables and fruits in season. Mush is not cooked, as the inmates will not eat it. The supplies are bought by competitive bids. The health of the inmates is generally good. A physician is employed at \$90 per year. Reading matter is furnished the inmates and religious services are held once a week. The records are well kept. Tramps are not received except on the order of the township trustee.

The asylum is a modern brick structure with shingled roof. It is a very well arranged building and in excellent condition. The farm buildings are old and poor, but the premises are well cared for and the fences and door yards are in good condition. The institution needs better equipment in some parts. It should have a complete steam laundry outfit and electricity for lighting. This institution is well suited to the purpose and is to considerable extent fire proof. It is too good a plant to be lighted with oil lamps. It is in good hands and is well cared for.

Posey County Poor Asylum, located one-half mile west of Mt. Vernon. Visited August 17, 1908. J. C. Calvert, superintendent. The superintendent receives \$600 per year and the matron \$240, and the commissioners furnish everything. Ninety acres of good land, all tillable and valued at \$150 per acre, constitute the farm. It is broken some by the creek. There is an excellent garden, a small orchard and some small fruits.

The capacity of the poor asylum is 90 and the population at this time 35, one man and one woman being insane. The sexes

are kept in separate parts of the building. The house is clean, is in excellent hands and well managed. The inmates also appear clean. The two bath tubs in the inmates' part are used weekly. There is plenty of good clothing. The bedding is in good condition. Straw mattresses, some cotton mattresses and a few feather beds are in use. In the sitting and sleeping rooms is plain wooden furniture. The building is well lighted and ventilated from the windows. Electric lights are used at night. The building is heated by steam. A woman who is hired for the purpose, does the cooking for the inmates, under the direction of the matron. Meat is served every day. The other food consists of wheat and corn bread, all kinds of vegetables and fruits in season. Mush is also served. The dinner served the day of this visit was good. The health of the inmates is generally good. A physician is employed. Religious services are occasionally held. No reading matter is furnished. Tramps are received only on the order of the township trustee.

The institution is constructed of brick, plastered inside, with wooden floors. It is well arranged and has a good dining room and kitchen. The walls and woodwork have been badly stained by a leaking roof and need refinishing. The farm buildings and fences are in good condition. I was well pleased with this institution. There is less attention given to farming and more to caring for the inmates.

Pulaski County Poor Asylum, located one mile west of Winamac. Visited August 26, 1908. H. G. Alberding, the superintendent, receives an annual salary of \$500. A new superintendent, will take charge September 1st. The commissioners pay for the services of one man and one woman. The farm consists of 160 acres of moderately good land, valued at \$50 per acre. It is all tillable. A garden, which is not very good on account of the dry weather, covers about half an acre. There are about 100 trees in the orchard and some small fruits. The stock consists of 4 head of cattle, 4 cows, 3 horses and 12 head of swine.

The capacity of the asylum is 50, with a population of 16 at this time. The sexes are kept in different parts of the building and the house and inmates are clean. There are three bath tubs, with hot and cold water, and the inmates bathe once a week. They have plenty of clothing, which is in fairly good condition. Many of the beds are double. They are of iron, with straw mattresses, sheets, blankets and some quilts, all in fair condition.

There are some bugs, which the matron say she tries hard to exterminate. The furniture consists of some cheap wooden chairs. Oil lamps are used. Electricity could easily be installed as they have an engine for pumping. The institution is heated by hot water. This plant could be run more effectively and economically if covered with asbestos in the basement. The windows furnish the ventilation.

The superintendent's wife does the cooking. Meat is served twice a day. The other food consists of wheat and corn bread, milk and butter part of the time, all kinds of vegetables and fruits in season and occasionally mush. Supplies are bought by competitive bids. The health of the inmates is generally good. A physician is employed at \$200 per year. Religious services are not held. Some reading matter is furnished the inmates. Careful records are preserved. Tramps are received only on the order of the township trustee.

The poor asylum is an old remodeled building. The walls are brick and plastered inside. It is well arranged for the separation of the sexes and for all essential purposes. The walls need re-decorating and the wood work needs painting. The farm buildings and fences are fairly good, but the door yards are not well kept. New walks are needed about the building and better facilities in the kitchen and laundry.

The institution is one that will be difficult to care for unless it is put in good repair and equipped with some better facilities in the kitchen and laundry. A good Board of County Charities and Correction is needed in the county.

Ripley County Poor Asylum, located seven miles southwest of Versailles. Visited August 14, 1908. James Murdock, the superintendent, receives \$400 per year and his wife \$80. They have seven children in their family. They furnish their own living rooms. The commissioners pay for the help of three men and one woman. The farm is valued at \$35 per acre. Of its 519 acres, 359 are tillable and 160 in timber. There is a two-acre garden and an orchard, but very little small fruit.

The capacity of the poor asylum is 40, with a population of 23. Two men are insane. There is no suitable place for them, hence it is necessary to keep constant watch over them. They are locked up at night. There are two buildings but the sexes are not well separated. The floors are in bad shape and the house is not clean. The inmates are not clean, but perhaps are as clean as conditions

permit. There are no bath tubs, but they bathe weekly. Their clothing is sufficient in quantity and fairly good. The bedding consists of straw mattresses, blankets and sheets. It is in poor condition due in part to lack of facilities for caring for the place. The bedsteads are all of wood and many of them well worn. Oil lamps are used for light and wood stoves for heat. The ventilation comes from the windows. Meat is served twice a day, fresh meat occasionally, butter, milk, potatoes and other vegetables and bread. The health of the inmates is generally good. The physician employed receives \$175 per year for his services. Religious services are not held. Some reading matter is furnished the inmates. The records are fairly well kept.

The institution is composed of three frame, tin-roofed buildings—one for the superintendent and two for the inmates. All are about worn out, as well as everything about them. They are not worth repairing. A new asylum with modern equipment is needed. The farm buildings are fairly good. The superintendent and his wife keep the institution as well as can be expected under the circumstances.

Scott County Poor Asylum, located one half mile south of Scottsburg. Visited August 10, 1908. John C. Robbins, the superintendent, receives \$450 per year and furnishes his own living rooms. He has two sons in his family. The farm consists of 90 acres of good land, valued at \$100 per acre, of which 85 acres are tillable and 5 in timber. There is an ample garden. The old orchard is about gone, but a new one is just started. There is also some small fruit. On the farm are 7 head of cattle, 5 cows, 3 horses and 16 head of swine.

The capacity of the poor asylum is 50, with a population at this time of 11. One woman is insane. The sexes are not well separated, though they are kept in different parts of the building. The house and inmates are very clean. There is one bath tub in the institution and the inmates bathe weekly. They have plenty of good clothing. The bedding is well kept. There is not enough furniture, and what there is, is not very good. Oil lamps are used to light the institution and wood stoves for heating purposes. The windows furnish the ventilation. The superintendent's wife does the cooking and the same food is served inmates and the family of the superintendent. It is good and sufficient in quantity. Supplies are bought by competitive bids. The health of the inmates is generally good. A physician is employed at \$40 per year.

No religious services are held. Some reading matter is furnished. Tramps are received only on the order of the township trustee.

The asylum is constructed of brick, with wood floors, slate roof and plastered walls. It is in good condition, as are also the farm buildings, but the fences are poor.

A heating plant is badly needed and more help should be employed. This is a small institution and is generally well kept. There are a number of double beds, among which is one wooden bedstead. The rooms are heated by little stoves in each room, which is not only very inconvenient but very dangerous and should by all means be remedied.

Spencer County Poor Asylum, located four miles west of Rockport. Clyde C. Brown, superintendent. Visited August 18, 1908. The salary of the superintendent is \$650 per year. His family consists of his wife and two children. The county commissioners furnish all the help. There are 240 acres on the farm, 220 of which are tillable and 20 in timber. The land is good and is valued at \$75 per acre. The garden of five acres is good, but the five-acre orchard is poor. There is very little small fruit. On the farm are 6 head of cattle, 5 cows, 7 horses and 40 head of swine.

The capacity of the poor asylum is 30, with a population of 13. There are no insane present and the superintendent says he refuses to receive such. The sexes are separated in a way, being in separate buildings. The house was very filthy and foul but I think the superintendent is not to blame. It is impossible to make it sanitary. The inmates were not clean and they cannot be kept clean under the conditions. There are no bath tubs, but they bathe once a week. The clothing of the inmates is not very clean. This, also, it is impossible to keep clean. The bedding is fairly well cared for, but still is in poor condition. There is very little furniture and it is very poor. Oil lamps are used to light the poor asylum and stoves and grates are used for heating purposes. There is plenty of ventilation. The matron does the cooking for the inmates. Meat is served twice a day. The other food consists of wheat and corn bread, butter twice a day, vegetables and fruit in season and mush in the fall and winter. Supplies are bought by competitive bids. The health of the inmates is generally good. A physician is employed at \$90 per year for both the jail and poor asylum. Some reading matter is furnished but no religious services are held. The records are in fairly good shape. Tramps are not received except on the order of the trustee.

The residence and one of the buildings for the inmates is constructed of wood and a smaller building which has been used for the confinement of the insane, is built of brick with iron bars in the windows. The buildings for the inmates are one-story. They are a disgrace to a civilized community. No good thing can be said about them. The farm buildings are dilapidated and the fences poor. The door yards are in good condition. There is only one need and that is a new institution. The superintendent does his part well apparently, but he has resigned and a new man will take charge September 1st. The superintendent said to me that the commissioners had asked for an appropriation to build a new institution, but the council refused.

Starke County Poor Asylum, located one mile south of Knox. Sylvester Grindle, superintendent. Visited August 25, 1908. The superintendent receives \$500 per year for his services and the commissioners furnish one man and one woman as help. His family consists of his wife, one daughter and a crippled brother-in-law. There are 200 acres of land in the farm, some good and some poor, valued at \$50 per acre. Of this, 190 acres are tillable and 10 acres are in timber. There is a fairly good garden of one and a half acres, also an old orchard about gone and a new one which will soon begin to bear. There is an abundance of small fruits. On the farm are 10 head of cattle, 9 cows, 4 horses and 26 head of swine.

The capacity of the poor asylum is 25, with a population of 4. The sexes are in different parts of the building. For an old house, this institution is kept quite clean and the inmates are in excellent condition. There are two portable bath tubs in use and the inmates bathe weekly. They have plenty of clothing, which is in good condition. The bedding, consisting of straw mattresses, is very satisfactory. The furniture consists of wooden chairs and rockers. Oil lamps are used to light the institution and wood stoves for heating purposes. The ventilation comes from the windows. The matron does the cooking. The superintendent's family eats at the same table with the inmates and has the same food. It consists of pork, beef and chicken, wheat and corn bread. All kinds of vegetables and fruits are served in season and mush is sometimes used. Supplies are bought by competitive bids. The health of the inmates is good. A physician is employed on a salary of \$50 per year. Plenty of reading matter is supplied and religious services are held occasionally. The records are well kept.

Tramps are not received unless on the order of the township trustee.

The asylum is constructed entirely of wood. It is a square frame building with separate rooms for the inmates and a sitting room for men and one for women. The building is old and the walls are cracked in places and rough. The roof is old and in need of repair. The building is well kept. The farm buildings, fences and door yards are in fairly good condition.

The needs of the institution are a new roof, a new floor, some repairing in the washhouse and re-kalsomining of the walls. While the institution is old, it is adequate for its purpose. There are no troublesome cases to care for, so the problem is not a difficult one. If the building is kept in repair, it will serve the purpose for some years to come.

Steuben County Poor Asylum, located three and one-half miles northwest of Angola. Visited September 2, 1908. John L. Anspaugh, superintendent. The salary of the superintendent is \$600 per year and the commissioners furnish all the help. The superintendent's family consists of one child. The farm contains 310 acres of tillable land and 10 acres in timber. The land is fair in quality, being valued at \$85 per acre. There are about three acres in good garden and an orchard covering five acres. There is plenty of small fruit. The stock consists of 30 head of cattle, 12 cows, 6 horses and 60 head of swine.

The capacity of the poor asylum is 40 and the population 27, of whom one man and one woman are insane. The sexes are kept in different parts of the building, but use one dining room. The house and inmates are fairly clean. At this time the women were engaged in canning fruit. There are two bath tubs in the inmates' part and one in the superintendent's residence. The inmates bathe weekly. They have plenty of clothing, which is in good condition. The bedding consists of straw mattresses, sheets, comforts and spreads, all reasonably clean and free from bugs except in one room. Wooden chairs and a number of well worn rockers compose the furniture. Oil lamps are used to light the institution and steam to heat it. The steam plant would give better service if the pipes in the basement were covered. The ventilation comes from the windows. Two hired women do the cooking. Meat is served twice a day. Sometimes eggs are used instead of meat. The other food consists of wheat and corn bread, milk and butter most of the time, vegetables and fruits in season.

Mush is frequently used in winter. With the exception of drugs and hardware, supplies are bought by competitive bids. The health of the inmates is generally good. A physician is employed at a salary of \$50 per year. Religious services are occasionally held. The records are carefully kept. Tramps are received occasionally on the trustee's order.

The asylum is constructed of brick, with plastered walls and shingled roof. It is fairly well arranged for an old building. There is a separate building with cells for insane and for some of the men. The buildings are not in very good repair, and the interior needs painting. The large barn is in good condition but the other buildings are very poor. The fences and door yards are good. A laundry equipment is badly needed, also a lighting plant. Some repairs are needed, also an oven in the kitchen. The institution is in the hands of an efficient superintendent and matron who are doing all they can for the comfort and care of those in their charge.

Switzerland County Poor Asylum, located five miles west of Vevay. Visited August 12, 1908. The superintendent, Frank Rosenberger, receives \$500 per year and his wife, as matron, receives \$200. There is one son in the family. The superintendent furnishes his own living rooms and has one team. There are 160 acres of poor land in the farm, valued at \$12 per acre. The land is on the "knobs," is broken and is very poor, only about 35 acres being tillable. The garden is not good, although it covers about five acres. There is an orchard and plenty of berries. The estimated net annual expenses, besides products, are \$2,200. The stock consists of 17 head of cattle, 6 cows, 2 horses and 23 head of swine.

The capacity of the asylum is 40, with a population at this time of 21. Two men and one woman are insane, it being necessary to keep the woman and one of the men locked up. The sexes are well separated. Under the conditions the house is fairly clean, as are also the inmates. There are no bath tubs, but the inmates bathe once a week. Their clothing is fairly good. The bedding is in fair condition also. The furniture is dilapidated. Oil lamps are used to light the institution and a hot air furnace furnishes the heat. There is plenty of ventilation from the windows and some from the roof as there is no ceiling of any kind. The matron does the cooking for the inmates. Meat is served once a day, with wheat and corn bread, potatoes, onions, etc. Mush is served once

a day. Supplies are bought by competitive bids. The health of the inmates is generally good. A physician is employed at \$65 per year. Religious services are not held. Some reading matter is furnished. Tramps are received only on the order of the township trustee.

This is a very old building. The residence portion is of stone and the rest of wood. It is dilapidated, worn out and unsuited to its purpose. The superintendent and his wife keep it in about as good condition as is possible under the circumstances. The farm buildings and door yards are fair, but the fences are poor. There is only one need at this asylum and that is a new building. The present one is not worth repairing. The people cannot be properly cared for in it. The insane are kept throughout the year in a kind of shed with stoves in separate parts, which certainly could not keep them warm in winter. The rooms are enclosed but must be cold. Where the men sleep must be very cold and disagreeable in winter.

Tipton County Poor Asylum, located one mile southwest of Tipton. Visited September 9, 1908. C. W. Middleton, superintendent. He receives \$500 per year and furnishes nothing. His family consists of two children. The farm contains 279 acres, of which 229 are tillable and 50 in timber. The land is good and is valued at \$100 per acre. There is one acre in garden, two and one-half acres in potatoes and an orchard of about four acres. There is a good variety of small fruits. The stock consists of 27 cattle, 10 cows, 9 horses and 30 head of swine. The capacity of the poor asylum is 40. At the time of this visit there were 18 inmates, one woman and two men being insane. The arrangement of the building does not provide for sex separation. Under the conditions the house is fairly clean, as are also the inmates. There are no bath tubs but the inmates bathe every two weeks. Their clothing is in good condition and is sufficient in quantity. There are all kinds of bedsteads. The bedding consists of straw mattresses, blankets, sheets and comforts. With a few exceptions, all are in good condition. The bedding is mostly free from bugs. There are rocking chairs and other wooden chairs in the rooms, which are well worn. Electricity from the city plant is used to light the asylum and stoves are used for heating purposes. The ventilation is by means of the windows. Although it was quite warm, some rooms were closed and not well ventilated. The cook-

ing is done by hired help. Meat is served twice a day, wheat and corn bread, all kinds of vegetables and fruit in season, and mush is occasionally served. Supplies are purchased by competitive bids. The health of the inmates is good. A physician is employed. Religious services are held weekly. The records are carefully kept. Tramps are received only on the trustee's order.

The main building is an old frame structure in which most of the men are quartered. It also contains the kitchen and dining room. The superintendent's residence, in which some of the inmates live, is of brick, covered with slate. It also is old. In fact the whole institution is old and ill adapted to its use. A new building with modern equipment is needed. The farm buildings, fences and door yards are good. The institution is kept about as well as can be expected under the conditions, and what there is, is fairly sanitary.

Union County Poor Asylum, located three miles northeast of Liberty. Visited September 18, 1908. The superintendent, James Norris, receives \$800 per year for his services and he furnishes all the help about the institution. The farm contains 160 acres of good land, valued at \$100 per acre, of which 140 acres are tillable. The remainder is in timber. There is a good garden of $2\frac{1}{2}$ acres, not very productive this season on account of the drought. The one-acre orchard is good and there is a good variety of small fruit. The stock consists of 13 head of cattle, 6 cows, 4 horses and 100 head of swine.

The capacity of the poor asylum is 25, with a population at this time of 15, of whom one man and one woman are insane. It is necessary to keep one man locked up at night. The sexes are completely separated. House and inmates are clean. The inmates have two bath tubs and they bathe once a week. Their clothing is plentiful and in fairly good condition. The bedding consists of straw mattresses, comforts, blankets, sheets, some spreads,—all in good condition. Some bugs were found in some of the rooms, but strong effort is made to exterminate them. There is very little good furniture. The chairs are rickety and worn out. The bedsteads are of iron without springs, which with straw mattresses, make hard beds. Acetylene gas is used to light the institution and steam furnishes the heat. The windows furnish good means of ventilation. The cooking is done by the inmates under direction of the matron. Meat is served twice a day, with wheat

and corn bread, butter and milk all the time, coffee and all kinds of vegetables and fruits in season. Mush is occasionally served. Supplies are not bought by competitive bids. The health of the inmates is good. A physician is employed. Religious services are seldom held. Some reading matter is furnished. The records are carefully kept. Only in extreme cases are tramps received and then they are not quartered in rooms used by the inmates. A trustee's order is required.

This is a very well constructed brick building, with plastered walls and slate roof. The cell house is separate from the main building. The buildings are not in very good condition. Much plastering is off and the varnish is all gone from the woodwork. There are no shades to the windows. The farm buildings, fences and door yards are in good condition.

The tank should be repaired and new chairs and springs for the iron bedsteads should be provided. If the necessary improvements are made, the institution will be very good. The superintendent and his wife are anxious to keep it in excellent condition. They keep the women's room especially homelike and comfortable. There is a babe in the institution, the child of a feeble-minded woman, and it should soon have the attention of the proper authorities. It is about a year old. A Board of County Charities would be helpful in this county.

Wabash County Poor Asylum, located two miles north of Wabash. Visited September 7, 1908. Erwin Thompson, superintendent. The salary of the superintendent is \$500 per year. The commissioners employ one woman to help. The superintendent's family consists of one child. The farm, consisting of 157 acres, all tillable, is of medium quality, valued at \$65 per acre. There is a garden of four acres, but it is not very good on account of the dry season. The orchard, which covers three acres, is good and there is a good variety of small fruits. There are 30 head of cattle, 10 cows, 3 horses and 30 head of swine on the farm.

The capacity of the asylum is 45 and the population is 30, 4 of whom are insane. The sexes are in different parts of the building and have separate dining rooms and sitting rooms. The cleanliness of the house is excellent and the different parts of the institution are in good condition. The inmates are also clean. There are two bath tubs, one in each part, and the inmates bathe weekly. Some bathe oftener. There is plenty of good clothing.

The bedding generally is in good condition. Single spring beds are used mostly, with straw mattresses, sheets, blankets and spreads. There are some bugs, but proper care is taken to keep them out. The furniture consists of wooden chairs and some rockers and there are some benches outside. Oil lamps are used to light the institution and a furnace and stoves to heat it. A new plant is to be installed. The ventilation is good. The cooking is done by the men under the direction of the superintendent's wife. Meat is served at least once a day and the inmates have wheat and corn bread, butter every day, milk and coffee, all kinds of vegetables and fruits in season and mush is generally served for breakfast. Supplies are bought by competitive bids. The health of the inmates is very good. A physician is employed. Religious services are occasionally held. The records are carefully kept. Tramps are not received except on the trustee's order.

There are three buildings—one for the superintendent's residence, one for the insane and one for men and women, divided into two parts. The buildings are of brick with plastered walls and slate roofs. With the exception of an addition built last year, all the buildings are old, but are in fairly good condition, as are also the farm buildings and fences. The door yards are excellent. A new heating plant and a new pump are needed, and both of these have been passed upon favorably by the commissioners. A lighting plant is also needed and there should be laundry equipment. The institution is well managed. The superintendent and his wife deserve commendation for its excellent care and management. The institution has an operating room, with sufficient equipment for ordinary cases. It has proven to be helpful and has been used several times.

Warren County Poor Asylum, located seven miles north of Williamsport. Visited August 27, 1908. J. R. Albright, the superintendent, receives \$1,000 per year for his services, and he furnishes his own living rooms. He also employs one man and one woman to help about the institution. The farm consists of 340 acres of moderately good land, valued at \$75 per acre, of which 240 acres are tillable and 100 acres in timber. The garden covers $3\frac{1}{4}$ acres, but it is not very good on account of the drought. The orchard is very small and there is very little small fruit. The estimated net annual expenses, besides products, is \$1,413.50.

The stock consists of 20 head of cattle, 3 cows, 4 horses and 110 head of swine.

The capacity of the poor asylum is 40, with a population at this time of 8. Two of the men are insane. They are not dangerous and are able to do some work about the institution. The sexes occupy different parts of the building. The house is reasonably clean so far as the superintendent's efforts are concerned. The inmates appear clean also. There is one portable tub and the inmates bathe once a week. They have plenty of good clothing and the bedding is sufficient and reasonably clean. There are bugs and the walls are in such condition that it is very difficult to exterminate them. The furniture is old, but there is enough of it for the number present. Oil lamps are used to light the asylum and wood stoves were used last winter to heat the building. They have a steam heating plant, but it is out of order and dangerous, consequently was not used. The ventilation is by means of the windows. The matron, with the help of the inmates and one woman hired for the purpose, does the cooking. Meat is served three times a day, with wheat and corn bread, milk and butter all the time, fruits and vegetables in season and occasionally mush. Supplies are bought by competitive bids. The health of the inmates generally is good. A physician is employed at \$50 per year. No religious services are held. Newspapers are furnished as reading matter. The records are carefully kept. Tramps are received on the order of the township trustee.

This building is brick, covered with shingles. The walls are plastered and the floors are of wood. Most of the basement is dark and illy ventilated. The building is in bad condition. It is old and needs to be repaired in many places and the heating plant put in order. I was told that \$800 had been appropriated for repairs. The farm buildings are fairly good, as are also the fences and door yards. A general overhauling is needed, painting done, new locks put on the doors, the roofs repaired, the walls replastered in many places and some papering done. The heating plant should be made safe and the entire basement should have sufficient openings to admit air and light. Water should be provided and two bath tubs should be installed.

This has been a fairly good plant. The superintendent and his wife try to keep it in good shape and have tried to get rid of the bugs, but they are in the nail holes and cracks and it is al-

most impossible to get rid of them. This institution should be visited in the winter. The superintendent has made \$300 for the county above all expenses.

Warrick County Poor Asylum, located two miles east of Boonville. Visited August 18, 1908. The superintendent, L. M. Barnett, receives \$500 for his services. He has one son. He furnishes his own living rooms, teams and tools. The farm consists of 80 acres of good land, valued at \$85 per acre, all of which is tillable. There is a garden covering one acre and a small orchard, but very little small fruit. The stock consists of 3 head of cattle, 2 cows and 13 head of swine.

The capacity of the poor asylum is 30, with a population of 12. The sexes are kept in separate parts of the building and both the house and inmates were fairly clean. There are two bath tubs and the inmates bathe once a week. They have sufficient clothing, in good condition. Straw mattresses, quilts and cotton blankets are used, all in fairly good condition. There is very little furniture and practically no chairs in the building. Oil lamps are used for light and a hot air furnace for heating purposes. The ventilation is by means of the windows. The matron does the cooking. Meat is served three times a day, with wheat bread, all kinds of vegetables and fruit in season and occasionally mush in the winter. The health of the inmates is generally good. The physician employed receives \$80 per year for his services. Religious services are occasionally held, but no reading matter is furnished the inmates. The records are carefully kept. Tramps are received only on the order of the township trustee.

This is a frame building throughout. It is fairly well arranged. The superintendent's residence is in front and the building for the inmates back, but it is all under one roof. The department for women is entirely separate from that for men. The plastering is partly off in almost every room in the house, but it is to be replastered this fall. The farm buildings are fairly good, as are the fences and door yards.

More furniture is needed and a better water supply. The plant is comparatively new, but it has reached the stage where it needs cleaning, plastering and painting. The woman in charge is very sympathetic and kind, anxious to take good care of the inmates. The county commissioners are disposed to make the needed repairs.

Wells County Poor Asylum, located four miles southeast of Bluffton. John R. Ditzler, superintendent. Visited September 1, 1908. The salary of the superintendent is \$800 per year. His family consists of himself and wife. He furnishes a horse and buggy and the commissioners supply everything else. The farm covers 270 acres of moderately good land, valued at \$90 per acre. The stock consists of 36 head of cattle, 20 cows, 5 horses and 80 head of swine. There is a good garden of about three acres and a four-acre orchard. Half an acre is grown in small fruits.

The capacity of the poor asylum is 75 and the population is 35. The sexes are kept in different parts of the building, having also separate dining rooms. The cleanliness of the house and inmates is excellent. There are two bath tubs and some of the inmates bathe weekly, others every two weeks. They have plenty of good clothing. The bedding, consisting of straw mattresses, sheets, comforts and spreads, is all in excellent condition. New single iron bedsteads with springs have been supplied and there are wooden chairs and rockers in all the women's rooms. Oil lamps are used to light the institution. The heating is by steam. The pipes in the basement should be covered with asbestos. The building is well ventilated from the windows. The cooking is done by a hired woman, under the direction of the superintendent's wife. Meat is served once a day, occasionally twice a day. The other food consists of wheat and corn bread, butter and milk all the time, fruits and vegetables in season, and occasionally mush. Supplies are bought by competitive bids. The health of the inmates is generally good. A physician is employed at \$90 per year. Religious services are occasionally held. The records are carefully kept. Tramps are received on the order of the township trustee.

The poor asylum is a well-built, slate-roof structure, erected in 1876. It is well arranged for the separation of the sexes. All the buildings are in excellent condition. A lighting plant and good laundry equipment are needed. Cleanliness and neatness abound everywhere and it is a pleasure to inspect such an institution. The women's rooms are neat, clean and homelike. There is none of the common institutional odor about the place, except perhaps in one of the rooms. The superintendent and his wife deserve great credit for the care and management of the institution.

THE COUNTY JAILS.

For several years past the Board of State Charities has received from every sheriff in the State, each month, a report of the movement of population in the county jails. A similar report is received from the superintendent of the one county workhouse, that in Marion County. From these reports the following facts have been gathered. They refer to but 91 of the 92 counties in the State, as Pulaski County has no jail. Its prisoners are sent to the jail in Starke County.

On the last day of the fiscal year there were 1,275 persons in jail—1,177 men, 72 women, 21 boys under 18 years of age and 5 girls under 18 years of age. More than half of this number were serving sentence—683 men and 35 women. There were 495 awaiting trial—461 men and 34 women. In the remaining 62 are included 43 insane persons, 3 tramps and 16 who were held temporarily, such as runaways, witnesses, etc.

The number of jail inmates on September 30, 1908, was less by 51 than on the same day in 1907. The following statement of the census taken on the last day of the past five years may be found interesting for comparison:

	Males.	Females.	Total
1908.....	1,198	77	1,275
1907.....	1,202	124	1,326
1906.....	979	83	1,062
1905.....	814	75	889
1904.....	870	79	949

Reference to the table by counties, which appears on subsequent pages, will disclose the fact that at the time of this census many of the jails had few prisoners and that fourteen were without prisoners on that day. The fourteen empty jails were in the following counties: Boone, Brown, Harrison, Jasper, Jay, Newton, Ohio, Orange, Owen, Ripley, Spencer, Steuben, Switzerland and Washington. The highest number of prisoners was to be expected in Marion County, which contains the city of Indianapolis. In the jail there were 112 men and 16 women and in the workhouse 235 men. No women were in the latter institution. All such were sent to the Correctional Department of the Woman's Prison. Of the sixteen women in the jail, seven were serv-

ing sentence. They also might properly have been sent to the same department of the Woman's Prison.

Next to Marion County the greatest number of prisoners was reported from Vigo County, where there were 95. Vanderburg County had 59; Lake, 51; St. Joseph, 51; Delaware, 45; Allen, 37; Wayne, 35.

Indiana's jails have for years been noted for the number of intoxicated persons and vagrants confined therein. The effect is bad upon the persons themselves, upon the jail and upon the community: The expense entailed is by no means light, even in boarding prisoners. When there is added the dirty, unsanitary conditions produced, the spread of disease and vermin and the destruction of jail property caused thereby, the burden becomes many times greater. The following figures show the total number of persons confined in our county jails and one workhouse in the past seven years on account of intoxication and vagrancy:

	<i>Vagrancy.</i>		<i>Intoxication.</i>	
	Total Number.	Cost of Board.	Total Number.	Cost of Board.
1902	4,101	\$4,389 17	11,364	\$27,302 67
1903	3,059	3,760 82	12,394	32,053 42
1904	4,115	5,025 21	12,774	31,702 87
1905	3,948	4,848 14	11,687	33,193 06
1906	3,379	4,109 61	13,210	36,609 68
1907 (11 months)	2,007	3,517 15	14,361	42,946 03
1908	4,503	6,103 06	13,596	39,117 95

The number of intoxicated persons reported, 13,596, of whom 452 were women, is less than that of last year, but with that exception greater than that shown in any of the past seven years. Vigo County shows the greatest number of prisoners for 1908 for this cause—1,649, including 92 women. The cost of their board was \$4,904.09. The next greatest number was reported from Marion County. There were 539 in the jail and in the workhouse 1,092; total, 1,631 persons, for intoxication. One hundred and twenty-two of these were women. The total cost of board in the county jail alone was \$1,782.26. Other counties report as follows: Grant 605, board \$145.80; Knox 601, board \$1,289.60; St. Joseph 511, board \$2,090.40; Madison 400, board \$1,490.00; Delaware 372, board \$1,787.40; Allen 347, board \$1,877.96; Lawrence 347, board \$744.40; Vanderburg 196, board \$760.00; Clinton 302, board \$850.60; Tippecanoe 253, board \$1,038.80; Wayne 235, board \$1,510.60; Putnam 333, board \$442.85.

Four counties report no persons in jail on account of intoxi-

cation the past year. They are as follows: Brown, Lagrange, Pulaski, Ripley. As mentioned previously, Pulaski is the only county in the State that has no jail.

The number of vagrants reported for the year ending September 30, 1908, was 4,503, including 66 women. This was more than twice what it was for 1907—2,007—and greater than reported for any other year in the past seven years. The cost of their board in 1908 was \$6,103.06. The greatest number was reported from Vigo County, 873. Their board cost \$688.04. In Marion County, in the jail and workhouse, were 408. The cost of board in the jail alone was \$789.06. Other counties reported the number of vagrants and the cost of board as follows: Decatur 338, board \$180.42; Porter 243, board \$859.20; Elkhart 212, board \$113.60; Knox 205, board \$183.60; Montgomery 193, board \$155.60; Carroll 191, board \$135.40; Sullivan 190, board \$156.00; Monroe 184, board \$158.01. Vanderburg reports 6 tramps, board \$50.40; Allen County 140, board \$630.53; St. Joseph County 89, board \$266.80; Delaware County 31, board \$73.60; Madison 117, board \$156.00.

It should be stated that in Vanderburg County the municipal lodging house at Evansville and in Marion County the Friendly Inn at Indianapolis have been helpful in dealing with the tramp problem. Muncie and Anderson, like Terre Haute, have each a stone pile for prisoners. Laporte and Tippecanoe counties, which formerly had records for the large number of tramps they boarded, make a much better showing the past year. Laporte County reports 80 vagrants, whose board cost \$389.60, and Tippecanoe County 15, whose board cost \$82.40. Twenty-five counties report no vagrants in jail last year. They are as follows: Brown, Clinton, Crawford, Dekalb, Dubois, Fountain, Franklin, Gibson, Greene, Harrison, Jackson, Jasper, Jennings, Newton, Noble, Orange, Perry, Pulaski, Ripley, Rush, Scott, Starke, Switzerland, Warrick, White.

The following tabulation of the jail inmates for vagrancy and intoxication, classified by age, will be found instructive:

Age.	Vagrancy.	Intoxication.	Total.
16 and under.....	36	21	57
17 and under 35.....	2,626	5,402	8,028
36 and under 50.....	1,222	4,947	6,169
Over 50.....	511	2,435	2,946
Not given	108	791	899
Total	4,503	13,596	18,099

In addition to the monthly report received from each county jail, the Board receives at the close of the fiscal year a summarized statement of admissions for the entire twelve months. These statements have been combined in Table No. 2, which follows. They indicate a total of 38,865 persons admitted to the various county jails during the past twelve months, of whom 36,239 were men and 2,626 were women. By reference to the table it will be found that 17,749 of these persons (1,285 of whom were women and girls) served sentence, the proportion of the whole number being 46 per cent. The number of insane cared for during the year was 684. There were 5,361 tramps and the remaining 15,071 were held temporarily for various reasons. An apparent discrepancy between Table No. 2 and Table No. 3 in the number of vagrants calls for explanation. The figures given in Table No. 2 are taken from the summarized annual statements of the sheriffs; those in No. 3 from their monthly reports. It is assumed that in their annual statements the sheriffs have given the full number of tramps cared for, whether arrested or not. A single instance is that of Miami County. Twenty vagrants were reported in the regular manner, but in his annual statement the sheriff says that at least one thousand were in the jail during the year, of whom he kept no record. Another point of difference between the two tables lies in the fact that in No. 2 a certain proportion of vagrants is included under the heading "Served Sentence," while this distinction is not made in No. 3.

Practically all the jails in the State have been visited during the past twelve months by either a representative of the Board of State Charities or by the several Boards of County Charities. The reports of these visits of inspection, all of which can be found in the publications of the Board, make patent the serious disgrace resting upon the State in our county jail system as it is found in actual operation. From one county after another comes word of bad conditions—uncleanliness, foul air, idleness of the prisoners, enforced association of hardened criminals and first offenders, inadequate provision for separation of the sexes, and, all too frequently, the presence of unfortunate insane persons. In some instances the bad conditions are due to defective construction, this being particularly noticeable in the older institutions. The only remedy is a new building. Again the blame rests wholly upon authorities who have neglected too long the most simple repairs or have permitted gross carelessness in the jail's administration. Again and again a jail is spoken of

as a disgrace to its county and to Indiana. In the Indiana Bulletin of Charities and Correction for September, 1908, will be found the reports of visits made by the various Boards of County Charities within the past twelve months. There follows below a report of visits made by representatives of the Board of State Charities.

REPORTS OF VISITS TO COUNTY JAILS.

Boone County Jail, Lebanon. Visited October 9, 1907. D. B. McRoberts, sheriff. One man was confined in the jail at this time. The building is a stone structure, which is at present neither strong nor safe. There are six cells on each of the two floors. Two rooms are used for women prisoners. The ventilation comes from the windows. The ventilating pipes from each cell are out of order. The prisoners exercise in both the inner and outer corridor. The jail is lighted by electricity and heated by a hot air furnace. City water is used and there is city fire protection. There is a closet on each floor, one in the hospital and one in the department for women. The one on the second floor is out of repair. The jail was dirty and untidy and it was reported that bugs were to be found. The plumbing was not in good condition. There is city sewerage, which is said to be satisfactory. There are no bath tubs. The beds consist of two-story bunks. Mattresses and blankets are used. They were dirty and had a bad odor. There are some chairs in the jail. There is provision for the separation of the sexes, the rooms for the women being over the rear of the sheriff's residence. Boys are kept on the first floor and older prisoners on the second floor. The inmates are not employed. Not a single cell door will lock. The cells are dirty, foul smelling, untidy; the walls smoked and defaced with marking, scratching and pasting of paper. Prisoners have cut the windows in the outer corridor and have burned the wooden part of the locking device in the hall. The first floor is dark and dusty with cobwebs. The needs of the institution are cleaning, painting, repairing, proper sewerage, standard bedding, greater safety and a better administration.

Franklin County Jail, Brookville. Visited October 5, 1907. Edward Stenger, sheriff. There were no prisoners at this time. The jail is a stone structure, strong and safe. The ventilation comes from the windows and tin ventilators in the cells. There are 10 cells, 8 for men and 2 for women. The building is lighted

by electricity and heated by stoves. Steam heat is needed. The water supply is from the city. There are two closets in the department for men and two in the department for women, one of which in each department on the second floor is not in good condition. The building has not been used for some time, hence is quite dusty. The plumbing on the first floor is in good condition, but that on the second floor has been broken for some time. There is city sewerage, which appears in good condition, but there is a foul odor in the women's room. There is one old iron bath tub, located in the east corridor on the first floor. There are two bunks in a cell, supplied with mattresses and comforts. These were not clean. A sliding food table is used for the prisoners. There are no rules for either officers or prisoners. Provision is made for the separation of the sexes, the women being kept on the second floor in the rear of the residence. Only one woman has been received in a long time. There is provision for the classification of the prisoners, but no occupation is provided.

The jail needs painting inside and outside. The iron work should also be painted. The plumbing on the second floor should be repaired, steam heat should be provided, standard bedding furnished and the locking device on one of the cell doors repaired.

Greene County Jail, Bloomfield. Visited November 16, 1907. William W. Eddington, sheriff. There were four men present at this time. One of the men is employed on the sheriff's farm.

A boy sixteen years old is confined in the jail for stealing. This building is a brick structure, the sheriff's residence being of frame. The windows furnish the ventilation. There are four cells, two for men and two for women. The institution is lighted by incandescent electric lights and heated by a stove. The water supply is from the city and from a well. There are closets in the jail. The building is dirty and untidy. City sewerage is being put in. Ordinary tubs are used for bathing, as there are no bath tubs. The beds consist of hammocks. The comforts used are dirty and untidy. Two cells in a separate room are provided for the women prisoners, through which it is necessary to pass in order to reach the men's department. There is no classification of the prisoners and they are unoccupied. City prisoners are received.

Half a dozen or more patches in the walls show where openings were made for escapes. The prisoners are kept in the cells. The jail was in charge of a prisoner, who was keeping fire in the

stove and had the outside door open, so a young colored fellow went in and out at will and held conversation with a big colored man who was locked in the corridor with a sixteen-year-old boy. The doors of two cells were off. The jail is very weak and unsafe. Even the cage has many patches. The cement floor is broken and damp, the plumbing torn out in the women's department, the walls in bad shape, the woodwork defaced, the metal work out of repair. This could be patched, cleaned and painted, kept in good order and put under the care of a careful, intelligent jailor until arrangements are made for a new jail so badly needed. The floors are damp, as are also the walls; there is a bad odor and the building is unsanitary.

An appropriation of \$18,000 has been made for building a new jail. Plans not approved by the Board of State Charities are on file in the auditor's office.

Shelby County Jail, Shelbyville. Visited July 9, 1908. John H. Butler, sheriff. The population at this time was five men and one woman. There seemed to be good ventilation. The jail was dark on the first floor on the north side. The windows were covered with pierced sheet iron. The water supply is good. There is not enough water for flushing the latrines. The beds were foul, the comforts and mattresses unspeakably dirty and bugs were to be found. There were piles of waste in the corners of the corridors and in the bath room, and the windows were dirty. The plumbing was in fairly good condition and we found no trouble with the sewerage. There are new bath tubs, supplied with plenty of water. Hot water is supplied once or twice a week. The inmates bathe irregularly. The bedding is not washed. There are no rules. The sexes are separated and they are occupied in cleaning the jail. City prisoners are kept with other prisoners. The prisoners' food is cooked with that of the family and is the same every day—beans and potatoes. There is some complaint. The county physician says the women have very good attention. The women have been changed to another room because they called to people on the street. There are no rules.

Tippecanoe County Jail, Lafayette. Visited September 14, 1908. The jail, having a capacity of 43, had 20 prisoners at the time of this visit, one being an insane man awaiting admission to the State Hospital. The building is fairly strong and safe. The locks are all in good condition. There is a ventilator in each cell,

6x6. The cells on the west tier are lighted from the windows: those on the east tier are dark. Gas light is used in the corridors and the jail is heated by steam. The water supply is from the city. There is a latrine in each cell. At the time of this visit six of the latrines were being repaired. The east side of the jail has been freshly painted and the cells were fairly clean. The whole jail, including cells and corridors, is mopped every morning and on Tuesdays and Fridays is scrubbed by the prisoners. The west side is in disorder owing to the fact that the plumbing, which is old and defective, is undergoing repairs. The sewerage is through a nine-inch pipe connected with the city sewer. There is an open sink in each corridor. There are three bath tubs, one in each corridor of the men's department and one in the open corridor of the department for women. The latter is new. The prisoners bathe when they enter and once each week while confined in the jail. The bath room is open all day and may be used at will by the prisoners. There is no provision for a change of underclothing for the prisoners. They wash their own clothing in the bath room. Each prisoner attends his own cell. Some cells were found tidy, others untidy. The ticks are washed and the straw renewed every three months. The bedding was not clean. Two blankets are washed every three or four months. The jail furniture consists of benches in the corridor and one stationary bunk in each cell. There are no rules for the prisoners. They are released from their cells at 5:30, remain in the corridor until 9:00 p. m. The cells are open if the prisoner wishes to enter. The punishment prescribed for prisoners is to be locked in the cell on a bread and water diet. The sexes are separated and the wife of the jailor acts as matron. There is no classification of prisoners. Juvenile delinquents are kept in the infirmary department. The prisoners are occupied in cleaning the cells, corridors and dining room. There is no library, but magazines and papers are supplied by city missionaries. Religious services are held on Sunday and the jailor thinks the influence is beneficial. Tramps are not received unless sent by the police department. In the infirmary on the second floor there are three beds and one latrine. The floor is covered with linoleum. The place is very clean, but is perhaps not safe. The dining room was found very clean. The county pays for the laundry and the soap used. The county physician, who visits the jail when called, averages two calls a week.

Much improvement is shown in the management of the jail since the last visit of this Board. The institution needs painting and new plumbing and the lighting arrangement should be electricity instead of gas, as it is now possible for the prisoners to tamper with the fixtures. Better separation should be made between the prisoners awaiting trial and those laying out fines.

Vanderburgh County Jail, Evansville. Visited July 18, 1907. William E. Barnes, sheriff. The population at the time of this visit was 60—50 males and 10 females. Seven of the men were insane. The jail is fairly strong and safe. The ventilation is from the windows. The institution is lighted by gas. This was burning in the department for women, causing smoke and heat. It is also used by the prisoners for boiling food. Electric lights would be preferable. The institution is heated by steam from a central plant. The water supply is from the city. The water is muddy, but otherwise there is no complaint. There is one latrine in each cell, and all were in good condition. The jail was fairly clean and there was no odor. The cells on the second floor were marked and defaced by the pasting of pictures. The plumbing and sewerage were reported in good condition. There are five old iron bath tubs, small and unsanitary. Clothing is washed in them. The prisoners bathe when they are received and weekly thereafter. The bedding is washed once or twice a week, depending upon the discharge of prisoners. The bedding for the men is mostly hammocks, with blankets; that for the women is ticks and blankets. It seemed clean. There were some benches in the jail. "Kangaroo Court" is held and the jailor thinks it helps with the discipline. The rules are generally enforced. Punishment is by locking up, with a diet of bread and water. There are separate quarters for the sexes, but the stairway goes up through the men's department. The prisoners are well classified and are occupied in cleaning the jail, washing, etc. There has been no stone pile for over a year. There is a small library and religious services are held every Sunday. Tramps are not received.

REPORTS OF VISITS BY A. R. CHARMAN.

Adams County Jail, Decatur. Visited July 18, 1908. Eli Meyer, sheriff. The capacity of the jail is 14, with a population of 4 at this time. The jail is built of brick, iron and stone and is strong and safe. The ventilation comes from the windows. There

are 14 cells, two being used for women. Children, when confined, are isolated from the other prisoners. The jail is lighted by electricity and heated by steam. The water supply is from the city. There are three closets. These, as well as the plumbing and sewerage, are in good condition. The building was not very clean at this time. There is one bath tub in the corridor of the cell house. It is in good condition. The prisoners bathe when they are received and afterwards at will. They change their underclothing weekly. When in use the bedding is washed once a week. Iron bedsteads are used, with straw mattresses and blankets. They were reasonably clean. The furniture consists of some wooden chairs. The sexes are separated, two cells in a different part of the building being for the women. There is not much chance for classification of the prisoners and no means of occupation. Religious services are never held. Some reading matter is furnished. Plenty of good, substantial food is served.

A cell is needed for the insane and a bath tub should be placed in the department for women. Both of these needs are contemplated.

The jail, while strong and well built in many ways, is very poorly ventilated. The cells are closed and tight except the door, which is of iron slats. This sort of structure makes the free circulation of air impossible. There are not sufficient windows in the outer walls for light and air.

Brown County Jail, Nashville. Visited September 12, 1908. George M. Roberts, sheriff. The capacity of the jail is 4, but there were no prisoners at the time of this visit. This building is constructed of heavy logs, three logs thick. It is fairly safe except from fire, and is strong. The ventilation comes from four small windows, which have iron bars, and the doors are of iron. There are but two cells in the jail. There is no special place for women or children. The jail is not very well lighted, not at all in the night. A stove furnishes the heat. There is no water except as it is carried in and there are no closets. The rooms were in fair condition. An ordinary double iron bed is used, with a straw tick, sheet, blanket and quilt, all of which was in fairly good condition. There is no other furniture. The quantity of food served is sufficient.

Nothing but a new jail would satisfy the needs. This jail is a curiosity and should be preserved as such. They have had but

one prisoner in nine months. It is interesting to note that each year \$50 is appropriated for keeping and committing prisoners, and the auditor said in his five years in office it had never been exhausted.

Cass County Jail, Logansport. Visited June 26, 1908. Louis E. Beckley, sheriff. The capacity of the jail is 35, with a population of 5. This structure is of brick, stone and iron and is strong and safe. The ventilation comes from the windows. There is an apartment in the jail especially arranged for children. Electricity furnishes the light and steam the heat. Water is supplied from the city. A well in the yard is used in warm weather. It is said to be an artesian well. There are closets on each floor in good condition and the plumbing and sewerage are good. The building was very clean. There are five bath tubs and three showers located on each floor of the cell part. They are in good condition. The prisoners bathe once a week and oftener if they desire. The bedding, consisting of excelsior mattresses and cotton blankets, on iron bedsteads, was not as clean as it should be. The sexes are well separated, the women being kept in a different part of the building. The prisoners are occupied in cleaning their own apartments. Religious services are not held. Some reading matter is furnished. Plenty of good food is served.

This is a well-planned jail, with ample accommodations for present use and some space not yet fitted up. It was neat and clean everywhere and seemed to be well managed. The only suggestion is that the beds should be of straw mattresses and the ticks and bedding should be washed more frequently than seemed to be the case. I saw no evidence of bugs or roaches.

Clark County Jail, Jeffersonville. Visited August 10, 1908. Oscar Johnson, sheriff. The capacity of the jail is 22, with a population of 15. There are four insane persons in the jail. The cells are strong, but the cage is not. The ventilation comes from the windows. Electricity furnishes the light. A stove is used for heating purposes and the water supply is from the city plant. The building was clean and showed every evidence of being well kept, but it needs painting inside. The plumbing and sewerage are both good. There is one bath tub. Hot water may be had from a small heater temporarily arranged. The prisoners change their underclothing once a week. When the bedding is in use it is washed once a week. It is good in part. The sheriff has been

authorized to buy hammocks. There is no other furniture. The sexes are kept in different apartments and there is some classification, but the prisoners are not occupied. Religious services are held twice a month.

The great need is a new jail. This one is old and rather unsafe and is practically worn out. It is kept about as well as any one can keep it under the conditions. It is a building not worth spending much money on in repairs. For a county the size of Clark a better jail or a workhouse is needed.

Crawford County Jail, English. Visited September 15, 1908. James S. Hanger, sheriff. Capacity 6, with a population at this time of only one prisoner. This is an ordinary frame house, back of which is a one-story brick cell house containing a cage with three iron cells. It is fairly strong, but not very safe unless the prisoners are locked in the cells. It is well ventilated by the windows. Oil lamps furnish the light and a stove is used for heating purposes. All the water used must be carried. There are two cisterns, both of which are dry and in need of repairs. The plumbing and sewerage are good and the house appeared clean. There are no bath tubs and the prisoners are not required to bathe. The bedding is washed every two weeks. It was fairly clean. There is no opportunity to separate the sexes, except by placing them in separate cells, and there is neither classification of nor occupation for the prisoners. Religious services are never held. Tramps are admitted only when arrested.

This is a small jail, not modern. It needs supplies, such as more bedding, towels, kitchen utensils, etc. A well is also needed. It is barren of all modern conveniences, but the sheriff takes good care of what is there. There are seldom many prisoners to be cared for.

Dekalb County Jail, Auburn. Visited September 4, 1908. James W. Reed, sheriff. Capacity 20, population 2. The outside walls of the jail are of brick, the inside being of solid stone. The cells are of stone with iron doors. The jail is strong and safe. It is well ventilated and lighted throughout, there being windows on two sides. There are 14 cells, including 2 for women. When children are brought to the jail they are kept in one of the women's cells if unoccupied. Electricity is used for lighting the jail and steam for heating it. The water supply is from the city water plant. There are four closets in fairly good condition.

The plumbing is good, also the sewerage, which is from the city. The building is very clean. There is one shower bath in the men's department in fairly good condition. The prisoners bathe once a week. The beds are iron bunks and the bedding consists of excelsior and cotton mattresses and cotton blankets, all reasonably clean. It is washed once in two weeks. The sexes are entirely separated, being kept in different parts of the building. The prisoners are classified, but they have no occupation. Reading matter is furnished and religious services are held weekly when there are prisoners. Tramps are not received and city prisoners only when sentenced. Plenty of good food is served. The institution is in good shape. It should have a bath tub for the women. Some outside repairs to the walls are needed.

This jail was built in 1875 and is mostly of heavy stone, even the cells, but is well ventilated, lighted and heated and is well kept. The town has a lockup where all town prisoners are taken first. It is a single room with two bunks in it. This was in fairly good condition. The town is a quiet place and does not have many prisoners of any kind.

Delaware County Jail, Muncie. Visited September 21, 1908. S. B. Perdieu, sheriff. The capacity of the jail is 65, with a population of 34. The cell house and cells are of heavy stone with iron bars on the windows and doors. The floor, also, is of stone. The cage is separated from the outer wall by a corridor to which the prisoners do not have access. The women's part is entirely separate from the department for men. It has two rooms, in one of which are three separate cells. The jail is very strong and seems perfectly safe. The ventilation is excellent and there are sufficient windows to admit plenty of light and air. Electric lights are used at night. The jail is heated by steam radiation and the water supply is from the city plant. The plumbing and sewerage are in good condition and the jail is remarkably clean. There are two bath tubs, one in the department for men and one in the women's department. The prisoners bathe once a week and change their underclothing weekly. The bedding is in first-class condition. It is washed once a month. There are 11 closets in the jail. The furniture consists of some chairs and a table in the corridor. As mentioned above, the sexes are entirely separated, but there is no classification of prisoners. The prisoners are occupied on a stone pile when sentenced. Religious services

are held once a week. Tramps are not received unless brought in by the city authorities.

This is a jail that has many prisoners. It is in excellent condition and well managed, but more room is needed. The women are in charge of a matron.

Fayette County Jail, Connersville. Visited September 19, 1908. Cyrus Jeffrey, sheriff. The capacity of the jail is 10, with a population of 3, one of whom is insane. The cell house is of brick, lined inside with steel. The cage is all of iron, well lighted and well ventilated. There are two cells for women which open off the men's cell house. The jail is very strong and seems perfectly safe. The windows are so arranged that the ventilation and light are good. Electricity is used at night. The building is heated by hot water and the system is good. Water is supplied from the city plant. In general, the jail is in good condition. At the time of this visit, early on Saturday morning, it was pretty dirty in places. The sheriff said it would be cleaned as usual on Saturday morning. The plumbing and sewerage are fairly good. There are no bath tubs, but the prisoners bathe and change their underclothing weekly. The bedding is good and is washed once a month or oftener if necessary. The furniture consists of a wooden settee and a table. There are no special rules for the prisoners. The separation of the sexes is not good, as the cells for the women open off the men's cell house. The prisoners are neither classified nor occupied. Religious services are not held at present on account of the insane man, that being the subject upon which he is insane. Tramps are not received except in extreme cases.

The needs of the jail are a separate apartment for women prisoners, the installation of bath tubs and the painting of the cell house. This is a good jail and fairly well kept. If the suggested improvements were made it would be in splendid shape. The insane man has been adjudged insane and has been confined in the jail more than a year. He is a desperate case and the sheriff is wondering what to do with him.

Floyd County Jail, New Albany. Visited September 17, 1908. Claude A. Sittason, sheriff. The capacity of the jail is 35, with a population of 6. The cell house is constructed of brick, lined half way up inside with iron. The floor is concrete. The three-story iron cage is in two parts, one for white men and one for

black. They are the same in every particular. A vestibule leads to each part and each has a fair sized corridor. The women and children have separate departments. In the men's department is a padded cell for the insane. The jail is very strong and seems perfectly safe. The ventilation and light from the windows are very good. Electricity is used at night. The institution is heated by stoves and the water supply is from the city plant. This is one of the cleanest jails I have seen. The plumbing and sewerage are excellent. There is one bath tub in the woman's department and two showers in the department for men. The prisoners bathe once a week or oftener. The bedding is in excellent condition and reasonably clean. It is washed three times per year or oftener if necessary. There are rules for the prisoners. The sexes are completely separated and well classified. They do not have any occupation. The prisoners are placed in dark rooms as punishment. Religious services are held weekly. Tramps are received only when they are arrested and committed.

A steam heating plant is needed and I was told it had been promised. This jail is in excellent condition and very well kept. It was remodeled within the past year and with the exception of the heating is the best jail I have seen in the southern part of the State.

Fountain County Jail, Covington. Visited August 27, 1908. John R. Hardesty, sheriff. The capacity of the jail is 60 and the population at this time is 6. This is a unique structure. The outer wall is built of heavy, solid stone; the floor is heavy sawed limestone; the roof is of slate. The windows are barred and screened by heavy perforated steel plate half way up. In the cell house are two stories with a double row of cells on each floor. The cells have no openings except the door and a very small ventilator. Each cell has a double iron door, or rather two doors. In the front part of the cell house is a large corridor used as a dining room for prisoners. Off from this room is the cell for women. The jail is very strong and entirely safe. The ventilation is excellent. The sun shines into every cell either in the morning or afternoon and the cells are well lighted. Electricity is used to light the jail at night and steam is used for heating purposes. The water supply is from the city plant. The building is very clean and the plumbing and sewerage are in good condition. There is one bath tub and the prisoners bathe at least

once a week. They change their underclothing weekly. The bedding is washed every six weeks. It is in good condition, the beds being new. There are chairs and in the dining corridor a table. There is no special punishment for the prisoners. The sexes are kept in different parts of the building, the cells for the women opening off of the corridor of the cell house. The prisoners are not classified and are unoccupied. Religious services are never held. Tramps are received only when arrested and city prisoners are paid for until they are sentenced.

There are no special needs. The cell house would be improved by painting and the bedsteads should be stronger or heavier. While the jail is not the best arranged, it is one of the strongest jails I have seen. It seems to be in good repair and well cared for. While the separation of the sexes is not as complete as it should be, it cannot well be changed. For one of its style this is a good jail.

Harrison County Jail, Corydon. Visited September 16, 1908. Alver G. Ward, sheriff. The capacity of the jail is 6. There is only one prisoner in charge of the sheriff at this time, and he is in the Floyd County Jail for safe keeping. The cell house is of brick with a stone floor. The cage is rectangular, or rather it is an iron box with four cells or small boxes in it. It is not very strong and not at all safe. There are enough windows to furnish ventilation and the jail is light enough. Electricity is used at night and a stove heats the building. The water supply is from the city. There is a faucet in the kitchen, but none in the cell house. The jail is fairly clean. There are no bath tubs and no requirement about bathing. The bedding is good and is washed frequently. A chair and a table constitute the furniture. There is a separate place for the women, but it is in no better condition than that for men. Tramps are not admitted except when arrested. A complete cage in the cell house, a heating plant, bath tubs, closets and a sewer are needed.

This jail is a disgrace to any community. An appropriation of \$3,000 has just been made for putting it in repair. It will do part of what is needed, but it is doubtful if this amount is sufficient. The sheriff is anxious to keep it well if it is put in proper condition.

Howard County Jail, Kokomo. Visited September 8, 1908. Joseph Lindley, sheriff. Capacity 39; population 9. The jail is constructed of stone, with iron doors and stone floors. It is

very strong and seems to be entirely safe. There is good ventilation from the windows and the jail is well lighted. There are 39 cells, 36 for men and 3 for women. Children when present are kept in the women's department. The institution is lighted by electricity and heated by steam. City water is used. The ten closets, the plumbing and sewerage are in good condition. The building is quite clean. There are two bath tubs located in a cage, one of which is in good condition. The prisoners are said to bathe frequently. The bedding is washed twice a quarter and oftener if needed. The prisoners change their underclothing weekly. The beds are of iron, fastened to the side of the wall and can be raised in the daytime when not in use. Straw mattresses and cotton blankets are used and they were found reasonably clean. There was no evidence of bugs. There are rules for the prisoners. While the women are kept in a separate cell room consisting of three cells, that department opens into the corridor of the men's department. The door is solid iron. The prisoners are classified. They have no occupation except cleaning the cage. Religious services are held every Sunday afternoon and Tuesday evening. I was present at an interesting service on Tuesday evening. Tramps are received only on commitment or in extreme cases. There are no regulations about receiving city prisoners. Plenty of good food is served.

A bath tub should be installed in the women's department and a new one should be put in the department for men. If possible, the entrance to the women's cells should be changed from the men's cell house. This is an excellent jail in most respects and it is in excellent hands. The sheriff is an intelligent, careful man and cares for and manages the institution well, in my opinion.

Huntington County Jail, Huntington. Visited September 8, 1908. George A. Mahoney, sheriff. The capacity of the jail is 24 and the population 14. It is constructed of brick, stone and iron, is strong and seems perfectly safe. The ventilation is by the windows. There are thirteen cells, one of which is for women. Children are kept in the department for women.

The institution is lighted by gas, heated by steam and supplied with water from the city plant. There are six closets in good condition. The plumbing in connection with the closets and tub is practically new, but the pipes are old and frequently leak. In the residence the plumbing is not in good repair. The sewerage

system, which is from the city, is excellent. The jail is reasonably clean. There are two bath tubs located in the men's cage, one above and one below. They are in fairly good condition. The prisoners bathe frequently. The bedding is washed twice a year. It consists of cotton mattresses and cotton blankets. Stationary iron bunks are used. The prisoners change their underclothing weekly. There are rules for the prisoners. The sexes are separated, the women being kept in a room in a part of the building which is separate from the men, with an iron cage. It has a closet and lavatory, but no bath tub. The prisoners are classified, but no occupation is provided except cleaning the cage. Reading matter is denied the prisoners for the present, as they made improper use of it. Religious services are held weekly. Tramps are not received unless committed. There are no regulations about receiving city prisoners. Plenty of good food is furnished the prisoners.

A new bath tub is needed in the men's department and one should be installed in the department for women. The whole building needs general repairs, new floors, painting, etc. The jail is good and reasonably well cared for.

Jay County Jail, Portland. Visited July 18, 1908. Samuel H. Barr, sheriff. The capacity of the jail is 26 and the population at this time 4. The building is constructed of brick, iron and stone and is strong and safe. Windows furnish the ventilation. There are 26 cells, four of which are for women and four for boys. Two cells are used as a hospital ward. The remaining 16 cells are for men. The jail is lighted by electricity and heated by steam. The water supply is from the city plant. There are 26 closets in good condition. The plumbing and sewerage are also in good condition. The building is very clean. There are two bath tubs and four showers. The showers are in a bath room and the tubs in the department for women and children. They are all in good condition. The prisoners bathe once a week or oftener and they change their underclothing weekly. The bedding is also washed once a week. It consists of shuck mattresses and blankets, on iron bedsteads. The beds are in good condition. Some wooden chairs comprise the other furniture. The sexes are well separated and the prisoners classified. No occupation is provided. Reading matter is supplied, but religious services are not held. Plenty of good food is served. The only needs are some slight repairs to the furnace. It is a splendidly arranged

jail. It is prepared to classify the prisoners and to care for the insane. The building is well lighted and ventilated. It is also well kept and is an excellent example of a modern jail.

Jennings County Jail, Vernon. Visited August 15, 1908. Albert Gautier, sheriff. The capacity of the jail is 10 and there was one prisoner confined at the time of this visit. It is built of stone, brick and iron and is strong and safe. The ventilation is very poor. There are no openings except the door, and the windows in the corridor are so arranged as to admit very little light and air. Electricity is used to light the jail and stoves for heating purposes. The water supply is from the city plant, but the drinking water comes from a cistern. The jail is clean. There is very little plumbing, but there is a hydrant and a closet and the plumbing for these is fair. There is city sewerage connection and it is fairly good. Although there are no bath tubs, the prisoners bathe once a week. When in use the bedding is washed frequently and is fairly good. The only furniture is one or two wooden chairs. The sexes are separated, but the cell for women is in very poor condition. There is no classification of the prisoners and no occupation is provided for them. Religious services are not held, but some reading matter is supplied. Tramps are not received unless on the order of the authorities. A new cell house is needed. The present one is an old dungeon-like place, which cannot be repaired to advantage. This is an instance of a court house and jail in one building. It was erected in 1859 and is a good building, but the cell part is needed for records, etc. Such as it is, the jail is in splendid hands at this time.

Johnson County Jail, Franklin. Visited September 11, 1908. H. F. Musselman, sheriff. The capacity of the jail is 33, with a population at this time of 7. The building is constructed of brick, iron and stone. It has a brick wall around the cell house and is strong and seems entirely safe. The windows furnish the ventilation and give plenty of light. There are 17 double cells, one being for women. When children are confined in the jail they are kept in the department for women, if it is not occupied. The jail is lighted by electricity and heated by steam. The water supply is from the city plant. There are three closets in good condition and the building is very clean. The plumbing and sewerage are also in good condition. There are two bath tubs. I was not able to see all through the women's part, but was told there was a bath tub in that department, and I saw the

one in the department for men. It was in good condition and the prisoners bathe once a week. The bedding consists of straw mattresses and blankets on stationary iron bunks, two in each cell. On account of the absence of the sheriff and his wife I did not learn how often the bedding is washed. The sexes are separated, there being a cage for the women entirely apart from the men. I could not ascertain whether the prisoners were classified, but they are occupied on a rock pile. Religious services are not held, but some reading matter is furnished the prisoners. Tramps are received only when they are brought by the town authorities. Plenty of well-prepared food is served.

The floor in one part of the cage is badly rusted and needs repairing. This jail is of the older type, with a high brick wall surrounding the entire cell house. It is in first-rate condition throughout and seems to be well managed. On account of the absence of the sheriff very accurate information on some points could not be obtained.

Kosciusko County Jail, Warsaw. Visited September 5, 1908. Edward Haas, sheriff. Capacity 20, population 3. The jail is built of heavy stone and the cell house or cage is iron. The latter is a two-story square structure, with cells around the square, the cage being surrounded by a corridor. There is at present no separate place for women or children. The jail seems very strong and thoroughly safe. The ventilation is not good. There are enough windows, but they are too narrow to admit sufficient light or air. The jail is, therefore, gloomy. Electricity is used to light the building at night. The steam heating arrangement is good. The water supply is from the city. The jail is fairly clean. There is good plumbing and a good system of sewerage. There is only one bath tub in the men's department. There should be another in some part of the building that can easily be arranged for the women. The prisoners change their under-clothing and bathe once a week. The bedding is washed every three months. It was suggested that this was not frequent enough. It is good bedding and in fairly good condition. The furniture consists of some wooden chairs. As has been stated, there is no special arrangement for sex separation, but there is a room in the other part of the building that can easily be arranged for the women and also for children. The sheriff says he will urge this change. The prisoners are not occupied. Tramps are received only when brought by city officers. City prisoners are kept in the jail just as county prisoners are.

With the exception of certain defects noted above, this is an excellent building. It is in good hands and reasonably well cared for.

Lake County Jail, Crown Point. Visited August 21, 1908. F. S. Carter, sheriff. The capacity of the jail is 39, with a population of 54. The jail is two stories with brick walls. There are windows on two sides, barred in the usual manner. Within is a two-story iron cell house. The floors are of stone. This is an old structure, but a new building is now under construction which is to be adequate and modern. The jail is strong and seems to be safe if the prisoners are kept in the cage. With the present population the ventilation is not sufficient, but ordinarily it would be fairly good. The windows admit sufficient light. Electricity is used at night for lighting purposes and steam is used to heat the building. The water supply is from the city plant. Everything is in good condition so far as the jailer can make it under the circumstances. The plumbing is well worn and leaking in some places. There is no sewer connection and the jail is drained into a large cesspool. The new structure is to be connected with city sewerage. There are two bath tubs, one on each floor of the cell house, and the prisoners bathe weekly. The bedding is fairly good and is washed whenever it needs to be. There are printed rules on the walls of the cell house. Punishment is not often needed, but in a few cases the prisoners are confined in separate cells and deprived of the ordinary privileges. The sexes are completely separated, being in different parts of the building. Classification is not possible at present and the prisoners are unoccupied. Religious services are occasionally held. Tramps are received when they are sent by the city.

This has been a good jail and is well kept. The jailer seems to understand his business and gives attention to it. The sheriff was out of town at the time of my visit.

Madison County Jail, Anderson. Visited July 25, 1908. Solomon Smelser, sheriff. The capacity of the jail is about 30 and the population at the time of this visit was 27. The jail is constructed of brick, stone and iron and is fairly strong and safe. The ventilation comes from the windows. Electricity is used to light the jail and steam is used for heating purposes. The water supply is from the city and from a well. There are seven closets in fair condition. The sewerage and plumbing are good. The building is clean. There are three bath tubs, one in the residence

and two in the cell rooms. They are in fair condition. The prisoners bathe twice a week and change their underclothing weekly. The bedding is washed twice a week. Iron bedsteads are used, with straw beds and cotton blankets, in fairly good condition. There is no other furniture except one or two wooden chairs. The sexes are separated, two cells or rooms apart from the cell house being used for the women. There is no classification, but the prisoners are occupied on a stone pile. Religious services are held once a week. Plenty of good food is served.

The jailer thinks a new jail should be constructed, and this is our opinion also. The jail is old and ill-arranged and the cell locks are broken, which prevents locking the prisoners in separate cells. Doubtless it was at one time adequate for the purpose, but for a large county, with three or four large towns in it, it is no longer so. The jailer is efficient and the jail is as well kept as is possible under the conditions.

Marshall County Jail, Plymouth. Visited June 27, 1908. Daniel C. Vories, sheriff. The jail has a capacity of 20, but at the time of this visit there was only one prisoner. It is constructed of stone and iron and is strong and safe. The windows furnish the ventilation. There are 18 cells, two of which are for women. The jail is lighted by electricity and heated by steam. The water supply is from the city. There are seven fairly good closets and the plumbing and sewerage are good. The county has a sewer for the court house and jail, emptying into the river. The jail has just been painted throughout and it appears clean. There are no bath tubs. The bedding is washed once a week and consists of cotton blankets and excelsior mattresses on iron bedsteads. There are some wooden chairs in the corridor. The sexes are separated. The prisoners clean their own apartments. Very few tramps are received and they are admitted only on commitment. Plenty of wholesome, well-prepared food is served.

This is an old style jail, with a dark and gloomy cell house. It is strong and safe and is adequate for the county. Often there are weeks when there is no prisoner and there are rarely more than four present at one time. The sheriff is evidently a good man for the place.

Martin County Jail, Shoals. Joseph N. Workman, sheriff. Visited August 19, 1908. The capacity of the jail is 25, with a population of 5. The jail is constructed of brick, stone and iron. The cell house is also of iron. It is sufficiently strong and quite

safe. Ample ventilation comes from the windows. The institution is fairly well lighted from the windows. Oil lamps are used at night. The jail is heated by stoves. The water supply is from a large cistern for the main supply and a large tank filled from rain. There is no well. The building is not as clean as it should be. The jailer admitted it should be cleaner and promised to make it so. Outside the building the plumbing is good, but it is not so good inside. Rubber hose is used for flushing purposes. The sewerage is excellent. It is a private sewer. There are no bath tubs, but the prisoners bathe frequently. The bedding is washed every three weeks. I suggested that that was not often enough. It is not clean. The sexes are well separated by being put in separate cells in different parts of the building. There is no classification of the prisoners and they are unoccupied. Tramps are admitted on the order of the township trustee.

There should be at least two bath tubs in the jail. The institution is fairly good and seems to be adequate for the use of the county. It is kept in good condition.

Miami County Jail, Peru. Visited August 1, 1908. John Volpert, sheriff. Capacity 30, population 9. This jail is constructed of brick, iron and stone and is strong and safe. The ventilation comes from the windows. The jail is well lighted in the daytime by the windows and at night by electricity. The institution is heated by steam and the water supply is from the city water plant. There are eight closets in good condition and the sewerage and plumbing good. The part of the building where the county prisoners are quartered is clean and well kept, but the other parts, which are not much used, are not so clean. There are four bath tubs, one located in the vestibule for use when prisoners are received, the other three in the cell house. They are in good condition. The inmates bathe weekly or oftener and change their underclothing weekly. The bedding, consisting of sheets and cotton blankets, is washed once a week and is in fairly good condition. Iron bedsteads are used and both straw and cotton mattresses. There were no bugs to be seen. The other furniture consists of some wooden chairs. There are no rules for the prisoners. The sexes are separated, three cells in a part of the building entirely apart from the men being used for women prisoners. The prisoners have no regular occupation. Religious services are held once a week and reading matter is supplied.

Tramps are received over night. Plenty of good, wholesome food is served.

This is a very well constructed and well arranged jail. It is possible to make a good classification of prisoners and to manage them safely. They have also a place where insane prisoners may be isolated. The jail is well cared for by those in charge. This is an excellent example of a well arranged jail building.

Montgomery County Jail, Crawfordsville. Visited August 28, 1908. Edward Lawrence, sheriff. Capacity 50, population 11. This jail is of different construction from any I have ever seen. It has a circular revolving cage, all iron, with eight cells below and eight above. There is only one entrance to each group of cells. There is a corridor around the cage and the walls are of brick, with windows high from the floor with iron bars. The roof is of slate. In the vestibule are two single cells. Over the cage on the third floor is a room with two cells for women. These cells are iron of ordinary type. The jail is very strong and seems entirely safe. The ventilation is excellent, the windows being so arranged as to admit plenty of air and light. The cell house is well lighted from the windows but the vestibule is a little dark. Acetylene gas is used for lighting and steam for heating the jail. The water supply is from the city. The jail seems to be well kept and appears clean. The plumbing is good and the sewerage system is from the city. There is only one bath tub. The prisoners bathe and change their underclothing once a week. The bedding is washed frequently when in use. Straw mattresses are used throughout, and all are in good condition. Some chairs and benches are in the corridor, but there is nothing but iron bunks in the cells. The prisoners are punished sometimes by being placed in one of the separate cells. The sexes are in different parts of the cell house and fairly well isolated. Classification is possible but there is not much attention given to it. The prisoners are not occupied. Tramps are not admitted unless arrested and sent by the city.

More facilities are needed for bathing. The jail is reasonably well cared for. The cage is not of a proper kind as it seems to me in case of fire it would be impossible to get the people out, or if greatly heated in case of fire would be dangerous. There is little danger from fire, yet the device is such that if full of people and only one door to each part, it would be almost out of the question to remove them.

Noble County Jail, Albion. Visited September 4, 1908. Perry J. Stanley, sheriff. Capacity 18, population 5. One man is insane. The jail is constructed of stone, with iron doors. It is strong and safe. The ventilation is by windows on two sides of the cell house and is good. There are 15 cells, two being for women. When children are brought to the jail they are kept in one of the rooms for women. The jail is lighted by electricity and has been heated by a hot air furnace. A new hot air and steam plant is to be put in immediately, the appropriation for it having been made. The water supply is from the city. There are three closets not in very good condition. The closets and the plumbing need repairing. The county owns the sewer system of the town and the jail sewer is connected with it. It is good. The building was very clean. There is one bath tub located in the men's department. It is worn out and there is no hot water. The prisoners bathe and change their underclothing weekly. The bedding is washed weekly. It consists of straw mattresses and cotton blankets, in good condition. The beds are iron bunks fastened to the cell walls. The other furniture consists of iron chairs and a table in one part of the cell house. The sexes are separated, the women being kept in two rooms away from the men's part. Classification of the prisoners is possible and it is done to some extent but not as completely as it might be. No occupation is provided. Religious services are held occasionally and reading matter is furnished. Tramps and city prisoners are not received until sentenced. Plenty of good food is served.

The institution needs a new bath tub for the cell house and an additional one for the women's department. A new hot water plant is needed and the closets all need repairing. When these things are done, the jail will be in excellent condition. It is apparently well cared for and well managed.

Ohio County Jail, Rising Sun. Visited August 13, 1908. D. H. Durbin, sheriff. The capacity of the jail is 4, with only 1 prisoner at this time. The building is strong but is not very safe unless the prisoners are locked in the cells. The corridor around the cage is entirely unsafe. The ventilation is good and the building is fairly well lighted. A stove is used to heat the jail and the water supply is from a cistern. There is no plumbing or sewer connection. The jail is not clean. The prisoners bathe once a week, and when in use the bedding is washed once a week. There is no arrangement for separating the sexes nor for

classifying the prisoners. A separate cell is needed for women prisoners. The corridor around the cage and the ceiling needs to be lined with steel or in some manner made stronger so that the prisoners need not be kept in their cages or cells. There are few prisoners, but if the building was made safe and a separate cell provided for women, the jail would meet pretty well the needs of the county. The building is an old brick structure, with a stone floor and tin roof. The cage is situated inside the one large room.

Pike County Jail, Petersburg. Visited September 14, 1908. W. J. Harris, sheriff. The capacity of the jail is 60, but there are no prisoners at this time. The building is of stone, both the walls and the floors, with a steel cage. It is strong, safe, and well ventilated by means of the windows. There are fourteen cells. None of the cells are especially for the women, but one story of the cage is used when necessary. Neither is there a special place for children. Oil lamps are used for lighting the jail and steam for heating purposes. The water supply is from the city plant. There are fourteen closets but the flushes are not in good condition. They are soon to be overhauled. The building is very clean. When in use it is thoroughly washed every week. With the exception of the flushes above mentioned, the plumbing is in good condition. There is city sewerage connection. There are two bath tubs, located one in each story of the cell house. They are in very good condition but there is no hot water connection and it is necessary to carry the hot water. The prisoners are required to bathe once a week or oftener if necessary. When in use, the bedding is washed frequently. There are four swinging iron beds in each cell. Mattresses and cotton blankets are used. There is no evidence of bugs. Some benches and a table constitute the furniture. The prisoners are properly classified and there are rules for their conduct. Occasionally when several prisoners are confined religious services are held. Reading matter is furnished. Tramps are received when brought by the city authorities, but there is no regulation about receiving city prisoners. Plenty of good food is served.

The needs of the jail are new flushes for the closets, electric lights for the cage and repairs to the cage floor. The jail is well kept. The sex separation is not as complete as it should be and yet the women are fairly isolated from the men. They can be placed in a part of the upper floor of the cage without it being

known by the men and they cannot well communicate with each other. On the whole it is a good jail.

Porter County Jail, Valparaiso. Visited August 24, 1908. L. M. Greene, sheriff. The capacity of the jail is 24, but there were only 5 prisoners at the time of this visit.

The building is constructed of brick, stone and iron. The cell house is surrounded by an open yard with a high brick wall around it. Inside the cell house walls, which are of stone, is the iron cage with separate cells each large enough for six hammocks. There are also two cells for women and two to be used for children. These are within the cell house corridor, but with the doors closed they are out of sight of the men. The jail seems very strong and appears entirely safe. The ventilation is excellent. The building is well lighted during the day from large windows on either side and electricity is used at night. The jail is heated by a hot water plant and is supplied with city water. The jail is in excellent sanitary condition. The plumbing was recently put in good repair and the sewerage is excellent. There is connection with the city sewerage system. There is one bath tub in one of the women's cells, which can be used by all prisoners almost all the time. The prisoners bathe weekly and change their underclothing once a week. The bedding is fairly good and is washed once in two weeks. Most of the hammocks are old and pretty well worn. There are a few wooden chairs about the jail. There are no rules. The prisoners could be classified. They are not occupied. Some reading matter is furnished. Religious services are held by the Salvation Army once a week. Tramps are admitted at the discretion of the sheriff.

If the floor in the cell cage were repaired and a bath tub placed in the men's department, this jail would be in good shape. It is in good hands and seems to be well kept.

Posey County Jail, Mt. Vernon. Visited August 17, 1908. Alonzo K. Grant, sheriff. The capacity of the jail is 24, with a population of 12. One of the prisoners is insane. The jail is built of stone and iron and is very strong and perfectly safe. The ventilation is very poor. The windows are small and are located near the top of the cell house. The cells are quite dark and gloomy. Steam heat is used. The water supply is from the city and is very good. The building is not clean, due partly to the fact that there was an unusual number of drunks over Sunday. This being Monday, the jail was not yet cleaned up. The

sewerage, which is private, is excellent. There is one bath tub and the prisoners bathe once a week. When in use the bedding is washed every eight or ten days. It is fairly clean. The prisoners are punished by being confined in a dungeon. The sexes are partly separated, there being three cells in the cell house for women. Women are seldom confined. There is no classification and no occupation for the prisoners. Religious services are not held. In extreme cases tramps are received.

The needs of the institution are more ample means for admitting air and light and a separate place for women prisoners. The jail is in good hands but the prisoners could keep it cleaner. It is a very good jail with the exception of the needs noted above.

Pulaski County Jail, Winamac. Visited August 26, 1908. Charles M. Swisher, sheriff. This county has no jail. The prisoners are kept in the jail at Knox, Starke County. The county has one cell in the city lockup for detention purposes. There was one prisoner in the jail at Knox from Pulaski County.

The city lockup at Winamac, is a dirty, dilapidated old building, with a kind of vestibule and a room with three or four cells in which the door is the only opening. It is hardly a decent place in which to confine a human being, but it is the only place in the county seat for such a purpose. The county is not very rich and it has had a good deal of expense in ditching, bridging, etc., but it should surely provide a decent place to care for its prisoners. There are not a great many, but it seems a jail should be provided.

Ripley County Jail, Versailles. Visited August 13, 1908. Joseph E. Gordon, sheriff. The capacity of the jail is 20, but there are no prisoners at this time. The cage is strong but the corridor is weak and is unsafe. There are five windows, which give good ventilation. The jail is lighted by electricity and heated by a stove. There is really no water supply. It has to be carried for all purposes. The jail needs painting to cover up the marks, pictures and rusty iron; otherwise it is clean. There is poor sewer connection and no plumbing worth mentioning. There is one bath tub and the prisoners are required to bathe once a week. When in use, the bedding is washed weekly. It was in good condition. The sexes are separated as well as it is possible to do it. Classification of the prisoners is possible. They are unoccupied. Tramps are received when an order is given by the authorities. This jail needs a heating plant badly, also some water supply. It is a brick, stone and iron structure and would be a good plant

if supplied with the above mentioned needs. The sheriff is trying to get these improvements. The officers are slow to move, partly because they have so few prisoners to care for. They have had no one in jail for more than three months.

Scott County Jail, Scottsburg. Visited August 10, 1908. John S. Simonson, sheriff. The capacity of the jail is 6, with a population at this time of 2. It is strong and safe and good ventilation comes from the windows. Oil lamps are used to light the institution. There is one stove on the first floor, but none on the second. The water supply comes from an ordinary well and a cistern. All has to be carried in at this time on account of the dry weather. The jail is not very clean and the means for keeping it clean are very poor. There is connection with a good sewer but there is no plumbing to speak of. The prisoners are obliged to use buckets or wash tubs for bathing, but they bathe and change their underclothing weekly. The bedding when in use is washed once a week. There is neither separation nor classification of the inmates and they are unoccupied. There are certain regulations about receiving tramps but none relating especially to city prisoners. The jail needs a system of water supply, making possible proper toilets, lavatories, baths, etc. There should also be better heating facilities. The sheriff says the county commissioners are willing to put in a water system but the Council refused to appropriate sufficient money for the purpose. This jail is not very old and while not well constructed, if it were properly supplied with water facilities and better heating plant could be made fairly good for the necessities of the county. The sheriff seems to be willing to do his duty and keeps the jail as well as is possible under the circumstances.

Spencer County Jail, Rockport. Visited August 18, 1908. Ellis J. Thrasher, sheriff. The capacity of the jail is 12, with a population of 4. The cell block is strong and safe, but the corridor surrounding it is not. There are several windows which admit air freely and the cells are well lighted. Electricity is used at night. One large stove is used for heating purposes. The water supply, which is from the city, is good. The plumbing, which is new, is in good condition and the sewerage is also good. The jail is fairly clean. There are no bath tubs although there is city water for both lavatory and closet. The prisoners bathe once a week. The bedding is fairly clean. It is washed once a month and oftener when in use. The sexes are kept in different

parts of the building. There is no classification of prisoners and they are not occupied. No religious services are held. Tramps are not received.

The needs of the jail are a bath tub, which could be put in with little trouble, more cots and painting inside of the cell house. This is an old jail which was well arranged when built, except that the outer wall was not strong enough. It has been broken into by one mob and could hardly be defended by a sheriff. It is fairly well cared for by the sheriff, who seems to take some pride in his management of it. With the needed improvements it would serve the county fairly well for several years.

Starke County Jail, Knox. Visited August 24, 1908. A. J. Laramore, sheriff. Capacity 7, population 2. The jail is built of brick. The residence portion is covered with slate and the jail with metal. Within the cell house is the cage surrounded by a corridor with concrete floor. There are windows sufficient to admit plenty of light and air. Off the cell room is a vestibule, in one end of which is a cell for the insane. On the second floor of this vestibule is a cell for women and a single bath room for the use of all prisoners. The jail is amply strong in the cage but hardly strong enough in the surrounding corridor if prisoners are left long unguarded. It is practically safe with reasonable care. The ventilation is excellent. It is well lighted by the windows in the daytime and electricity is used at night. A hot water plant furnishes the heat. The water supply is pumped from a well into tanks in the attic of the court house, then piped to the jail. In summer, drinking water is carried to the prisoners. The building is not very clean, particularly the walls and windows, which are covered with spider webs and dust. The floors and cells are fairly clean. The cell house would be helped by paint. The plumbing and sewerage are good. The inmates bathe weekly. The bedding is washed once a month,—the pillow cases once a week when in use. It is in good condition and fairly clean. The prisoners change their underclothing weekly. The furniture consists of wooden chairs, a table in the cage and some chairs in the corridor. There are no rules. There is no classification and no occupation provided for the prisoners. Religious services are occasionally held. Tramps are received only on commitment.

The jail needs cleaning, rekalsomining, the iron painted and a new floor. There should be another bath tub in the cell house. Painting and cleaning is contemplated in the near future. The

institution is reasonably well cared for by a man who is simply not particular enough about cleanliness, but who feels it is sufficiently clean. It is not dirty enough to deserve special complaint.

Steuben County Jail, Angola. Visited September 2, 1908. George W. Willemar, sheriff. The capacity of the jail is 13, but there are no prisoners at this time. The jail is constructed of brick, with stone floor and slate roof. It is strong and safe and well ventilated by the windows. There are 13 cells, two of which, entirely apart from those of the men, are for women. There is no separate apartment for children. The institution is lighted by electricity and heated by steam. The water supply is from the city. There are five closets in fairly good condition. The plumbing is old, but fairly good. The sewerage is from the city and is not satisfactory, but a new sewer is contemplated. The building is fairly clean. There are three bath tubs, one located in the department for women, one in the men's department and one in the sheriff's residence. They are in fairly good condition. The prisoners bathe and change their underclothing once a week. The bedding is washed weekly. It is composed of sheets and blankets, which are in fairly good condition. Excelsior mattresses are used on the beds. There is no classification of the prisoners and they are not occupied. Religious services are seldom held. Reading matter is furnished. Tramps are received only when sent by the local authorities. Plenty of well prepared food is served.

This is a very good jail, fairly well kept. There are few prisoners at any time and none part of the time. We have no criticism to make.

Switzerland County Jail, Vevay. Visited August 12, 1908. Thomas Pickett, sheriff. The capacity of the jail is 5, but at this time there were no prisoners. The jail is very strong, built of stone with iron doors and window gratings. It is quite safe. The ventilation is very bad. Two windows in what might be called the corridor are the only means. Electricity is used to light the jail at night and one large stove heats the building. The water supply comes from the city plant. So far as is possible, the sheriff keeps the jail clean. There is good sewerage connection but the plumbing is in poor condition. There are no bath tubs but the prisoners bathe once a week. The bedding also is washed once a week and is fairly good. In such illy ventilated, dungeon-like cells it cannot be kept in very good condition. There is no other furniture. The sexes are separated only by an iron grating.

There is no classification of prisoners and they are unoccupied. No religious services are held.

The institution needs to be made over or made new. It would be possible to tear the inside out and put in modern cells and then put windows in the walls for light and air. This would not be wise but would at least be sanitary. The sheriff condemns the building in strong terms. The only redeeming feature about the jail is that few prisoners are confined.

Tipton County Jail, Tipton. Visited September 10, 1908. William E. Devault, sheriff. Capacity 12, population 3. The jail has brick walls lined with steel. It is strong and well ventilated by means of the windows and seems perfectly safe. There are 12 cells, 10 for men and 2 for women. Children are kept in the department for women. The jail is lighted by electricity and heated by steam. The water supply is from the city plant. There are three closets in good condition. The plumbing and sewerage are also good. The building has just been painted inside and looks clean and cheerful. There are two bath tubs, one located in the department for men and the other in the women's department. They are in good condition. The prisoners bathe twice a week. The bedding consists of straw mattresses, blankets and sheets, on portable bunks. It is washed once a week when in use. There is no other furniture. There are rules for the prisoners. The sexes are separated. The prisoners are also classified, but they have no occupation. Religious services are held occasionally and reading matter is supplied. Tramps are received only when sent by the city authorities, but city prisoners are not received. Plenty of good food is served. This is an excellent institution, well cared for and well managed.

Union County Jail, Liberty. Visited September 18, 1908. Charles Weidner, sheriff. The capacity of the jail is 16, with a population of 4. The cell house is of brick, lined with iron to the top of the first story. There are iron-barred windows in the upper part of the wall, and a grating of iron bars extends all around the upper part about two and one-half feet from the windows. The cell cage is of solid iron, except the door, which is barred, thus making ventilation and light poor in the cells. The jail is very strong and seems perfectly safe. Oil lamps are used to light the building at night. One stove supplies the heat. This seems hardly adequate in cold weather. The water supply comes from the city plant. The building is clean. The sewerage

connection is said to be adequate and the plumbing is good. There are no bath tubs and the prisoners bathe weekly. There are also two closets. When in use, the bedding is washed once a week. It is fairly good. There are no bugs. The furniture consists of a few wooden chairs and a table. There are rules for the prisoners. When disobedient they are locked in their cells for some time. The sexes are really not separated. They rarely have women prisoners, but when in the jail they are kept in the upper cells. The prisoners are not classified and they are unoccupied. Occasionally religious services are held. Tramps are often received in winter, but there is no regulation about receiving city prisoners.

The institution needs a separate cell for women. One or more windows should be cut in the lower part of the cell house for light and air; bath tubs should be installed and more adequate heating facilities should be provided. In most respects this is a very good jail. It would be excellent with the suggested improvements. The sheriff seems to be interested in keeping it in good condition.

Wabash County Jail, Wabash. Visited September 7, 1908. George Freeman, sheriff. The capacity of the jail is 15 and the population 3. The building is stone, with tin roof, stone floor and iron cage. It is strong and seems entirely safe. It is well ventilated and lighted by windows. There are thirteen cells, including two for women. Children are kept in the department for women, when there are no women in the jail. The jail is lighted by electricity, heated by steam and supplied with water from the city water plant. There are thirteen closets in fairly good condition. The plumbing and sewerage are also good. The jail was not very clean at the time of this visit, but gave evidence of being well kept. There is one bath tub located in the men's cage, which is in fairly good condition. The prisoners bathe and change their underclothing once a week. The bedding, consisting of excelsior and cotton mattresses and cotton blankets, is in fairly good condition. It is washed frequently. Rules for the prisoners are printed on the wall of the cage. The sexes are separated. The prisoners are not classified and they have no occupation except cleaning the cell house. Religious services are held weekly. Tramps are not received. Plenty of well prepared food is served. New beds are needed. This is a good jail and is fairly well kept.

Warren County Jail, Williamsport. Visited August 27, 1908. Daniel Tague, sheriff. The capacity of the jail is 10, with only one prisoner at this time. This is a new jail, in use only a short time. The walls are of brick and the roof of slate. The cage is iron and has four cells. It is surrounded by a narrow corridor and is well arranged so that there is plenty of light and air in every part. The upper floor is not quite finished. It is in this part that provision will be made for the women. One defect was noticed which may be remedied when it is entirely completed; that is, the windows have iron bars but no screens and they are so near the ground that any one could hand in any kind of an instrument, from a knife to a winchester. No doubt the sheriff will insist on this being changed. The building is strong and would be sufficiently safe if the windows were properly screened. Electricity is used to light the jail at night and steam furnishes the heat. The water supply is from the city. The jail is evidently in good hands. Everything is new and the sheriff says he will keep it clean and free from bugs. There is city sewerage connection and the plumbing seems to be excellent. There is one shower bath in one end of the cage and the prisoners bathe and change their underclothing weekly. The bedding is washed every two weeks. There are some chairs in the corridor. The sexes will be well separated when the building is completed. There can be but little classification, however, and the prisoners are not occupied. Religious services are not held. Tramps are not received. A bath tub should be provided in the department for women and the windows should be properly screened. The jail is small but perhaps will be adequate for a number of years.

Warriek County Jail, Boonville. Visited August 18, 1908. Raymond Scales, sheriff. The capacity of the jail is 24, with a population at this time of 3, one of whom is insane. He has been confined since December, 1905. The jail is very strong and seems entirely safe. The ventilation is good. There are windows on either side which admit light and air. The jail is heated by steam and lighted at night by electricity. The water supply is from the city plant but the equipment for using it is not sufficient. There is no bath. The sewer is said to be first class and, so far as I could examine, the plumbing was in good condition. In the absence of the sheriff I was not admitted to all parts of the cell house, but what I saw was fairly clean. There is no reason that

I could see for not having a bath tub on either side of the cell house. The prisoners bathe once a week. The women are placed in a part of the cell house not occupied by the men, but the separation is not complete. There is no classification of the prisoners and no occupation is provided. Religious services are seldom held.

This is a comparatively new jail. The cell house is in two parts, with separate entrances from the jailer's corridor. One side has not been used for men, and it is on this side that women are placed. It is a good jail and seems to be well kept. Bath tubs should be provided for the prisoners.

Wells County Jail, Bluffton. William A. Lipkey, sheriff. Visited September 1, 1908. The capacity of the jail is 16, with a population of 10. This is a brick structure, with slate roof and stone floor. There is a corridor around the cell house with several windows which admit plenty of light and air. In another part of the building there are two cells and a bath and toilet room for the women. The jail is quite strong and reasonably safe. The ventilation is excellent. Electricity is used to light the building and steam for heating purposes. The water supply is from the city, which is said to be excellent. The building is clean and free from bugs; the plumbing is in good condition and the sewerage, which is connected with the city system, is good. There is only one bath tub. It is in the women's department, but the men are allowed to use it when there are no women in the jail. A tub in the men's department is promised. The prisoners change their underclothing weekly. The bedding is washed once a week and is in good condition. Punishment consists in isolating the prisoner in a cell or denying him some privilege which others enjoy. While the sexes are well separated there is no classification and the prisoners are unoccupied. Religious services are occasionally held. Tramps are admitted when brought by the authorities, but there is no special arrangement concerning city prisoners.

In addition to a bath tub for the men, new bedsteads are needed. The floor should be covered with concrete so as to make it possible to keep it clean. The jail is well kept and the prisoners are humanely treated. The premises are nicely kept and everything bears evidence of efficiency on the part of the sheriff and those who assist him. There is a special cell for insane prisoners.

TABLE No. 1.

JAIL CENSUS, SEPTEMBER 30, 1908.

COUNTIES.	TOTAL POPULATION.			PRISONERS.												INSANE		TRAMPS, LODGERS.

DEPENDENT CHILDREN.

The legislature of 1897 undertook to unify the oversight of all children in Indiana who are public dependents. Under a law enacted that year, all children supported at public expense were placed under the supervision of the Board of State Charities. Later laws have provided that no child between the ages of three and seventeen years may be legally kept in a county poor asylum for a longer period than sixty days; that the institutions which receive children who are public wards must be approved by the Board of State Charities; that societies or institutions which propose to work for dependent children can not be incorporated without the approval of the Board; that a child can be made a public ward only by the judge of the juvenile court, who in all counties except Marion is the judge of the circuit court; that it is the duty of the several orphans' homes and the local authorities to place children in family homes and that all such children are subject to placement in family homes by the agents of the Board of State Charities.

Concerning the last point mentioned, the Board has obtained the following opinion from the Attorney-General:

STATE OF INDIANA.

INDIANAPOLIS, February 8, 1908.

HON. AMOS W. BUTLER, Secretary Board of State Charities, State House.

Dear Sir—I have the honor to acknowledge your favor of the fifth instant, wherein you inquire whether the agents of the Board of State Charities are required to secure the consent of the association or board to whose care public wards have been committed, under the act of February 23, 1907 (Acts 1907, p. 60), before such children can be placed by the board in family homes.

The act in question reads, in part, as follows: "He (the Judge of the Juvenile Court) shall hear every case * * * and if * * * he finds that the best interest of such child shall be served by making it a public ward, he shall do so by making it a ward of said court, of the Board of County Commissioners, or of the Board of Children's Guardians, as he shall direct, and he shall order that it be placed * * * in a proper family home or in such orphans' home or other children's institution in the county or elsewhere, as is provided for by the laws concerning dependent children: *subject, however, to subsequeunt placement in family homes by the proper*

*authorities. The duties of such orphans' homes or associations regarding the care, support, placement and visitation of dependent children and the payment therefor shall be the same and upon the same conditions now provided for, for such institutions or associations. * * * No child hereafter shall be supported, in whole or in part, in such institution, by a county, unless such child shall have been made a public ward by the order of the Judge of the Juvenile Court, and all such wards shall be available for placement in family homes by the agents of the Board of State Charities, and may, in the discretion of such Board, be so placed."*

The power of placement is conferred upon the Board of State Charities by Burns' Statutes 1901, Section 3186h. In Section 3186f it is provided "That the officers or agents of such association shall not be required to visit such children as are taken from the charge of the association and placed in family homes in other counties by State agents as hereinafter provided."

There is nothing in any of the sections above referred to, which indicates that the placement by the Board of State Charities shall be controlled by the local orphans' home or association. If such were the case, the efforts by the State Agent in finding homes for children could be effectually thwarted. Under the law as it stood prior to 1907, such a contention might have some basis, though even this is doubtful in view of the proviso to Section 3186f, above quoted. The act of 1907, *supra*, puts the matter at rest.

I am therefore of the opinion that, under the statute last mentioned, the agents of the Board of State Charities are not required to secure the consent of the association or board to whose care public wards have been committed, before they can remove such children for placement in family homes.

Whether the agents of the State Board may, without the consent of the association or local board, change the home in which the child was originally placed by the latter authorities, is a question not suggested by your inquiry, and has therefore not been considered.

I have the honor to be,

Yours very truly,

(Sd.)

JAMES BINGHAM,
Attorney-General.

Of the laws mentioned above, that which gives the judge of the juvenile court the sole authority to make a child a public ward is the most recent. It is Chapter 41 of the Acts of 1907. It defines a dependent child and a neglected child, provides for its maintenance and fixes the punishment of any person responsible for or in any way contributing to its condition. In general this law is giving satisfaction. One important result of its operation has been a more careful investigation into the conditions surrounding such children, and that in turn has meant a lessening of public expense, since fewer of them are sent to the orphans' homes than in former years. The Board of State Charities has

consistently advocated the retention of children in their own homes if the homes are fit or it is in any way possible to keep them there. It has discouraged the practice, more common in former years, of permitting parents to place their children in orphans' homes when they themselves were amply able to support them. The same spirit is manifest in the laws enacted in recent years.

The statistics which show the actual number of children admitted to the various orphans' homes in the past eleven years will be interesting in this connection. The figures which follow include new admissions only: 1898, 1,107; 1899, 1,079; 1900, 1,169; 1901, 1,088; 1902, 922; 1903, 837; 1904, 935; 1905, 967; 1906, 1,039; 1907, 880; 1908, 808. The total number of children received for the first time by these homes in the period indicated is shown to be 10,831, an average of 984.6 annually. It will be observed that the number in 1906, the last full year under the old law, is 1,039; in 1908, the first full year under the new law, 808, a decrease of 231 in favor of the year 1908.

Those who study these figures in connection with a table in the general report of the Board may be surprised that there has been no corresponding reduction in the past decade in the annual census of children in orphans' homes. This may be accounted for in several ways. One is that children are not now permitted to remain in the poor asylums, but are sent instead to the orphans' homes. Another is that the past few years have seen the organization of boards of children's guardians in half the counties of the State. Their wards are the neglected children and they constitute a new source of supply for the orphans' homes. The juvenile courts are sending children to the homes which formerly were committed to the reform schools. Still another reason is to be found in the fact that the orphans' homes are not as active as they should be in finding family homes for their wards. The various associations made a total of 777 placements and transfers in the twelve months ending September 30, 1908. This was forty less than in 1907 and 120 less than in 1906. In fact there have been only two years in the past nine in which the associations did not place more children than in the past twelve months. The banner year was 1902, when 967 placements and transfers were made.

There are frequent requests for the agents of this Board to find homes for children in institutions and sometimes complaints

come on account of their not doing so or at least not finding them as promptly as it is thought they should. Inasmuch as the law under which the agents act requires them to offer their services equitably among the several counties, it will occur to any person of thoughtful mind that if this is done not many children can be placed for any one county during the year. However, there are some counties that do not require the services of the agents and this from time to time gives them an opportunity to render additional service in counties where it is needed.

Our agents continue to render faithful service. They are doing a useful work. They can do only a fraction of what the State assumed should be done. To accomplish more will require additional agents. The lives of these children are valuable to the State. It is better to care for them properly in their tender years than to have them grow up a menace to society, to become charges of the State when they are grown.

On the last day of the fiscal year there were 1,633 children in the various local institutions in the State which receive public wards. The capacity of the same institutions is sufficient to accommodate approximately 1,200 more. Notwithstanding this, we hear from time to time of a sentiment in favor of establishing a new orphans' home. This is true in Wayne, Elkhart, Adams, Howard and perhaps other counties. We feel that this is unfortunate. There is no need for additional orphans' homes. Those existing can easily care for far more dependent children than are in the State. In fact in some counties the number in the homes is so small that there is a strong sentiment in favor of closing the institution. This has been done in several counties.

It has often been claimed that the presence of an orphans' home in a community acts as a temptation to a certain class of people to shift to it responsibility which they themselves should bear. Dependent children in Indiana who are public wards are cared for in 40 different orphanages scattered over the State. Most counties pay a specified per diem for the maintenance of their wards, in whatever home they may be kept. It is noticeable that those counties in which the institutions are located have the greatest number of wards and the greatest expense in proportion to population of any in the State. A few examples will bring this out clearly.

Morgan county and its neighbor on the east, Johnson, come within 200 of having the same number of inhabitants; general

conditions are also very similar; yet in 1907, which is the last year for which the figures are available, Johnson county spent \$2,068.25 on account of dependent children; Morgan, \$303.35. Johnson county supports its children in its local orphans' home; Morgan county depends upon a placing agency. Putnam, adjoining Morgan on the west and having a population greater than that of either Johnson or Morgan, spent \$198.85 on account of dependent children in 1907. Putnam is one of the counties which has recently abandoned its orphanage and placed its children in other institutions. Its expense the preceding year was about \$1,000.

In the eastern part of the State are other very striking examples. Wayne, Henry, Rush and Fayette are all rich agricultural counties. Wayne and Fayette abandoned their orphanages some years ago; Henry and Rush operate an institution jointly at Spiceland. Fayette, with 13,495 inhabitants, spent \$474.55 in 1907; Wayne, with 38,970 inhabitants, spent \$2,395.78. Rush, with 20,148 inhabitants, spent \$3,035.77 and Henry with a population of 25,088 spent \$2,450. The first two counties, having a combined population of 52,465 and no orphans' home, spent \$2,870.33 on account of their dependent children; the two latter with a combined population of 45,236 and an orphans' home, spent \$5,485.77 for the same purpose. Fayette and Wayne, with 16 per cent. greater population than Henry and Rush, spent 48 per cent. less money.

There are three adjoining counties in north-central Indiana of about the same population—a little over 28,000; Clinton, Howard and Miami, the last named being the only one in which an orphans' home is located. This home makes a specialty of receiving children from different parts of the State, each county paying a specified per diem for the maintenance of its wards. Miami county's expense on account of its own wards maintained there in 1907 amounted to \$2,536.04. Howard and Clinton counties' children are taken by a placing agency and transferred as rapidly as possible to family homes. In 1907 these two counties spent respectively \$969.56 and \$1,163.90 in supporting their dependent children.

Taking it the State over, the same conditions prevail—the counties which do not maintain orphanages within their borders spend far less than those which have such homes. The 40 orphans' homes in the State which maintain public wards are located in

37 different counties. These counties in 1907 spent \$157,882.84 for their dependent children, the amounts ranging from a little over \$1,000 in a number of counties to between \$10,000 and \$12,000 in Grant, Vanderburgh and Vigo and \$37,447.35 in Marion. Leaving out Marion, which spent such a large amount, the average expenditure for the remaining counties in this group is \$3,345.43. Including Marion the average is \$4,267.10.

Fifty-five counties do not maintain local orphans' homes. They send their children to the institutions in the remaining 37, making it a point as a rule to select those which are most active in placing the children in family homes. The result is a much smaller number of children on public support and a corresponding lessening of expense. In 1907 these 55 counties spent \$38,356.47 for the maintenance of dependent children, an average of \$704.04 for each county.

The county auditors report that the total expenditures in the State in 1907 on account of dependent children who were public wards, amounted to \$207,471.34, of which \$196,239.31 was for the regular operating expense of the homes and \$11,232.03 for new buildings and extraordinary repairs. In the preceding year the cost for the same purpose amounted to \$215,594.44. These figures refer to public funds only.

Attention is called to the report of the State Agent and to the accompanying tables in another part of this report.

REPORT OF THE STATE AGENCY.

AMOS W. BUTLER, Secretary :

I beg to submit the following report of work done by the agents of the Board of State Charities, during the fiscal year ending September 30, 1908.

The efforts of this department during the past year have been directed along the different lines of activity relative to dependent and neglected children who have been made public wards under the law. The general comprehension of this work logically divides itself into about three parts, namely—visitation and inspection of all institutions caring for dependent and neglected children; careful investigation of all family homes making application for our wards and placement of the children; and the supervision of children after their placement in the family homes.

During the past year, all institutions caring for dependent children made public wards have been visited by an agent of this department. In these visits it has been our purpose to acquaint ourselves with the children found there; to ascertain the methods of training used; to instill in those engaged in the care of the children the idea of fitting each child for a private home; and to make any helpful suggestions possible as to better care and disposition of the wards.

It has been sadly noticed that the several institutions caring for children do not seem to realize that the child must be taught to do something. The management has not done more than make a comfortable place for the child to stay and surround it with the influence of a kind, patient woman whose entire time must be consumed in keeping the house in order and looking after the children in a general way. All these institutions should be able to give every child some training; they should teach those things which children learn in well regulated family homes, such as respect for their elders, table manners, unselfish attitude toward other members of the household. For the older boys and girls who have had difficulty in keeping homes, the institutions should provide some industrial training. I find these requisites lacking in a great degree in the average orphans' home. The

matron should have the attitude that every child under her care must sometime embark upon the sea of life and it should be equipped in a fair degree to meet the obstacles that will present themselves. The highest ambition of the management of every institution for dependent children should be the equipment of the child to fill well a place in some normal family home. If the first trial of the child fails, then study the conditions surrounding the failures. If the child is deficient, then see to it that the institution gives that child what it needs to modify that deficiency. I do not wish to place a low estimate on the value of the work done by those in charge of, and interested in, the orphans' homes. The work is noble, but sometimes we may overlook the needs of the child in its future life, in our anxiety to provide present comfort for him.

In the investigation of family homes prior to placement of children, much careful and conscientious work has been done. The agent visiting the home presents clearly and forcefully all the responsibilities accompanying the taking of a child into the home. He must impress upon the applicant the importance to the child and the weighty responsibility resting upon the foster parent. Aside from this, the material aspect of the home, the character of the people, etc., must be carefully determined.

The after supervision, or visiting the child in the foster home, is a very vital duty. We are sorry to state that our agency force is too small to be able to comply with the law in regard to this part of the work. The law provides that each child shall be visited once a year. As it is now, we can only visit from 1,500 to 1,700 per year of the 3,000 children requiring visitation. I wish to emphasize the importance of these visits. The regular yearly visits often reconcile adverse conditions in the home and prevent much trouble. As a result of our being able, under present facilities, to visit children only once in every two years we often have to remove a child or make special investigation, resulting in neglect in some other department, and extra expense.

In our contact with people throughout the State we are glad to find an attitude in the public mind in harmony with our work. Public officials, as we call upon them, are always glad to see us and desirous of lending their support.

Very few changes have been made in the children's institutions throughout the State. Mrs. Ella F. Bundy, owner and matron of the Henry and Rush County Orphans' Home, located

at Spiceland, has added to her building by completing a new dining room and providing for baths in connection with the dormitories on the second floor. Cement walks have been put about the main building connecting the outbuildings. The Tippecanoe county commissioners appropriated \$7,500 to be used by the Board of the orphans' home in remodeling and adding to the old building in Lafayette. The agreement was, that when finished, the orphans' home Board should deed the property to the county. The work has been completed and the institution is fairly well equipped.

Indiana's work for dependent children met with a sad loss this year in the death of Miss Sarah Hathaway. Early in the summer she and one of her assistants perished in a hotel fire at Fort Wayne. Miss Hathaway had been superintendent of the orphans' home at Mishawaka for seventeen years and in that position had rendered a service of exceptional value in the cause of charity. Her tragic death was a great shock and her loss is keenly felt. The position thus made vacant was filled by the appointment of Mrs. Claudia Goodpasture.

TABLES.

The tables which follow are based on the monthly reports of the orphans' homes and the weekly reports of the agents.

Table I shows the work of the agents for the twelve months ending September 30, 1908. The four agents have spent a total of $844\frac{1}{4}$ days in the field during the year, visiting children, investigating applications, placing children in homes, inspecting orphan asylums and conferring with the public officials. Thirteen hundred and eighty-two children were visited and of these, 915, or 66 per cent., were found doing well; the condition and surroundings of 286, or 21 per cent., were less satisfactory, yet not of such a nature as to warrant removal of the children; the remaining 181, or 13 per cent. were found doing poorly, and proper action was taken in each case looking to the return of the child to the placing agency. Ninety-eight other visits were made to addresses given, without finding the children reported. Two hundred and twenty children were placed in homes during the twelve months, 172 being children who had not previously been placed by the agents, and 48 being transfers. Sixty children were returned to counties. The applications investigated numbered 339, and all but 77 of these were approved. The visits to the

various orphan asylums numbered 202; to county poor asylums, 6; to boards of county commissioners, 6. Special items of work not coming under any of the classifications given numbered 375. These included investigations into complaints, reports of alleged mistreatment, visits to citizens and officials interested in the work, etc.

The above constitutes the field work of the department, and its cost, including the salaries of the agents while engaged therein, amounted to \$5,724.03. The balance of the legislative appropriation for the department, amounting to \$2,272.43, shows the cost of the office work, stationery, postage, etc. The traveling expenses of children placed by the agents, paid by the counties, amounted to \$382.20, making the total cost of the agency field work \$6,106.23.

Table II shows the placement of children in family homes by the State Agency since the department was created April 1, 1897. In addition to visiting children in family homes, and in a general way supervising the work of the orphans' home associations, the agency has found time in the eleven and one-half years of its existence, to place 1,795 children, and it is gratifying to know that 1,382, or 77 per cent. of them have remained off public support. The results achieved are seen in the following statement:

Total number of children received.....	1,795
In family homes:	
Subject to visitation.....	694
Adopted	37
Over age	196
Over age and self-supporting.....	226
Ran away	66
Married	51
Died	27
With parents	69
In institutions other than orphans' homes.....	16
Total	1,382
Returned to counties.....	413
Total	1,795

In this table will be found also the figures indicating the number of children supported by each county on September 30, 1908. The significant thing in connection with these figures, as has been pointed out in previous reports, is that those counties

which have orphans' homes within their borders have the greatest number of dependent children.

Table III shows the movement of children in the orphans' homes supported in whole or in part at public expense. At the beginning of the year there were 1,582 public wards in the different orphans' homes in the State. In the twelve months just closed 808 children not previously on public support have been received, and 339 former wards have been readmitted, making a total of 2,729 children handled during the year. These are to be accounted for as follows:

In family homes:

Placed by the State agents	146
Placed by the associations	481
Total	627

Returned to parents:

By the State agents	2
By the associations	242

Total	244
--------------------	------------

Transferred to institutions other than orphans' homes.....	112
--	-----

In family homes, adopted.....	25
-------------------------------	----

Over age and self-supporting.....	17
-----------------------------------	----

Ran away or kidnaped.....	35
---------------------------	----

Died	36
------------	----

Total	1,096
--------------------	--------------

In orphans' homes, September 30, 1908.....	1,633
--	-------

Total	2,729
--------------------	--------------

Table IV shows the work of the orphans' home associations during the past five years and the children in family homes subject to visitation. In this table there has been considered the activity of the different associations in the matter of placing children in family homes. The number of children restored to parents is also given. It will be found that some of the associations have been quite active and that others did very little, while some have returned more children to parents than were placed in family homes. Among the homes which did little or no placing will be found those which make a specialty of caring for defectives and non-placeable children. Taking into consideration the whole number of children handled by the different orphans' homes during the year, as shown by Table III, it is found that the associations placed but 25 per cent. of their children in homes. Not

all so placed remained off public support, it having been found necessary in some cases to return the children to the asylum. Two hundred and seventy-two children were restored to parents during the year. This is equal to 10 per cent. of the whole number in orphans' homes in the twelve months.

The second part of Table IV indicates the number of children in family homes, subject to visitation, without reference to the time they were placed. Of the 3,040 children in homes, 2,235 were placed by the orphans' home associations, 694 by the State agents and 111 by other agencies.

Table V shows the population of the 40 orphans' homes supported in whole or in part by public funds, also the children boarded in private families or institutions by the Blackford and Howard County Boards of Children's Guardians. On September 30, 1908, there were 1,036 boys and 597 girls on public support in the different counties, an increase of 51 over the number of public wards on the same day one year ago. Some of the homes will be found to have a small number of children, such as Boone with 3, Clay with 11, Franklin with 6, Johnson with 14, Decatur with 5 and Warrick with 8. On the other hand, the Allen County Home has 57 children, that in Grant county 80, the Indianapolis Home for Friendless Colored Children 62, the Julia E. Work Training School in Marshall county 226, the German Baptist Orphans' Home at Mexico 83, the Vigo County Board of Children's Guardians 88, the Indiana Children's Home Society 63, White's Manual Labor Institute at Wabash 167. This table indicates, also, that only 99, or 6 per cent. of the children in orphans' homes are reported as full orphans, while 614, or 38 per cent. are reported as having one parent living, and in the case of 920, or 56 per cent. it is assumed in the absence of any information to the contrary, that both parents are living. The exact facts would probably modify these figures to a certain extent.

The age of children in the orphans' homes is also given in this table. There were 159 under five years of age, 562 from five to ten years, and 912 ten years and over.

Table VI shows the number of children in county poor asylums on August 31, 1908. Under the law, children between the ages of three and seventeen years may not remain in the county poor asylums longer than sixty days. Of the 92 asylums in the State, only 23 had inmates under seventeen years of age on the day noted. Eighteen of those were babies with their mothers, and of the

remaining 22, seven were epileptic, feeble-minded or insane, one was sick and 14 were able-bodied and bright. Those who remember that 12 or 15 years ago there were between 200 and 300 children to be found at all times in these institutions, will be gratified by this report.

I wish to take this opportunity of expressing to you and to the agents who have so faithfully discharged all duties, my most sincere gratitude.

Respectfully,

W. S. REYNOLDS, State Agent.

STATE OF INDIANA

TWELFTH ANNUAL REPORT

OF THE

DEPARTMENT OF INSPECTION

OF

MANUFACTURING AND MERCANTILE ESTABLISHMENTS, LAUNDRIES,
BAKÉRIES, QUARRIES, PRINTING OFFICES, HOTELS
AND PUBLIC BUILDINGS.

TO THE GOVERNOR.

1908

INDIANAPOLIS:

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING

1909

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
January 6, 1909. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, January 11, 1909. }

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

J. C. BILLHEIMER,
Auditor of State.

January 12, 1909.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

MARK THISTLETHWAITE,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana,
January 12, 1909.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer January 12, 1909.

E. O. THOMPSON,
Asst. Clerk Printing Bureau.

OFFICIAL LIST, 1908.

JOHN FITZGIBBONS.....Muncie, Delaware County

DEPARTMENT OF INSPECTION,
OFFICE OF W. E. BLAKELY, CHIEF INSPECTOR.

INDIANAPOLIS, January 5, 1909.

To the Honorable J. Frank Hanly, Governor of Indiana:

Sir—I have the honor to submit herewith the twelfth annual report of the Department of Inspection covering the fiscal year ending September 30, 1908, as required by Section 22, Chapter 142, Acts 1899.

Very respectfully yours,

W. E. BLAKELY,
Chief Inspector.

REPORT.

In presenting the following as the twelfth annual report of the Department of Inspection, I desire to state that the past year has been one of exceptional merit regarding the amount of work accomplished.

The number of inspections made since our last report have almost doubled those of the preceding year, and the work has covered a greater field.

The many requests from township trustees, school boards and the parents of children, in regard to the safety of school buildings throughout the State, are in a great measure responsible for this increase in the number of inspections.

The recent Collinwood fire, in Ohio, where over 100 children lost their lives on account of insufficient fire protection; the explosion of a boiler in a public school in Adrian, Michigan, last February, where more than 60 children were horribly burned and scalded, caused a general desire of the people throughout the whole State to see that their children were thoroughly protected during their school career.

This Department has been besieged by many, since the hotel fire in Ft. Wayne, desiring that all hotels be given a rigid inspection. This has been done in so far as is possible, with our meager force, by this Department, and the hotels of this State are in a better condition to cope with fires than ever before.

The following financial statement fully and accurately accounts for the amounts appropriated for salaries, traveling and office expenses. The report shows all work done by the Deputies in their districts, all the changes and improvements ordered and their compliances. Violations of all laws given this Department for enforcement have been successfully prosecuted in all the cases filed within the past year.

BOILERS.

The present year has been marked by only one boiler explosion with no resulting fatalities. This boiler was insured and inspected by an insurance inspection company about one week before the explosion occurred. The insurance company stated that a flaw between two rows of rivets in an upper plate, undetected by their inspector, was the cause of the explosion. Although the entire plant

was destroyed and a loss of \$25,000 sustained, no lives were lost, and the only accident was a slight injury to the engineer.

The number of recorded internal boiler inspections this year was 7,980, while during the preceding year only 4,043 were inspected. Many orders have been issued by this Department for the repairing of boilers and a few boilers have been ordered taken out on account of their poor condition and their liability to explode. Many of the inspections sent in to this Department show the boilers to be defective, but orders sent out by the Department insure a betterment of their condition.

It is only through the courtesy of the boiler companies that we obtain copies of the inspections made by them. Our State law does not require copies of inspections to be sent to this office.

The law as stated in section 2, chapter 246, Acts 1903, require that two internal inspections be made each year of all boilers used in the propelling of machinery. However, it makes no provision for a copy of these inspections to be returned to this department. Neither does it provide for the inspection of boilers used in office buildings, school buildings or other buildings where they carry as high a steam pressure, for the purpose of heating, as do the boilers used in many manufacturing establishments for the propelling of machinery.

I would recommend that the present law be amended in so far as to require all boilers, carrying 10 pounds steam pressure or more, to have two internal inspections each year, and a copy of all inspections made under this law mailed to this department.

EXPLOSIONS AND FIRES.

Two explosions of some magnitude have occurred in this State during the past year. The first was that of the E. I. DuPont de Nemour's Powder Company, near Fontanet.* The second explosion was that of the United States Powder Company one and one-half miles from Coalmont. The results of this explosion were four fatalities and two minor injuries.

I would recommend that laws be enacted by the General Assembly of the State pertinent to the manufacture of powder, viz: That the distances between all the different dangerous mills and the powder and dynamite magazines be regulated by law. Also, that the amount of powder and dynamite allowed to be stored in any one place be limited.

*The entire report of this explosion may be found on page 15.

The only other serious accident to be investigated by this department during this past year was the disastrous New Aveline Hotel fire at Ft. Wayne on the 3d of May, 1908. From all that could be learned upon investigation after the fire it seems that the hotel clerk was somewhat lax in calling the fire department proper. He at first called only the chemical wagon. By the time the other apparatus arrived the fire had gained such headway that it could not be stopped. The fire department also found itself unable to operate its aerial ladder. The longest available ladders reached only to the third floor and consequently many persons could not be reached who might otherwise have been saved. The lack of fire nets was a great hindrance also, as many of those who leaped from their windows might have been saved had the proper apparatus been at hand.

On August 9th, 1899, Deputy Inspector H. A. Richards made an inspection of this building and ordered that two fire escapes be erected. On March 6th, 1907, Deputy Inspector T. S. Williamson made an inspection. He found the escapes to be in satisfactory condition, but in addition ordered red lights placed at the intersections of all hallways and also at the head and foot of each flight of stairs. Also that a notice of "How to escape in case of fire" be placed in each sleeping room.

It was further ascertained that 12 lives were lost in the fire. Smoke that cut off all means of exit through the halls to the stairs and the two fire escapes, which this department had ordered on the building, was the main cause of this loss of life. The exact origin of the fire is unknown, but it seems most probable that it originated from a defective fuse plug among the electrical connections of a motor at the foot of the elevator shaft. This shaft being wooden-lined, carried the fire and smoke to every floor of the building.

ELEVATORS.

Elevators are found in almost every hotel, factory, mercantile establishment and public or office buildings in the State. Some few elevator shafts are lined with fireproof substances, some are lined with wood and other combustible material, and some are left entirely unlined. The danger from fire and smoke increases in proportion also. This being the case, it is not at all surprising that many of our worst fires gain their greatest headway through an elevator shaft. They are a carrier of fire and a disseminator of smoke throughout every floor of a building. They are, however, a very necessary evil and can not be eliminated.

If, however, there was a law compelling all owners of buildings, where elevators were in use, to cut a flue or air duct with a trap door held in place by fusible links, as is done in the roofs of all theaters above the stage, in the roofs of their buildings directly over the elevator shafts, the smoke would have a clear passage through the shaft and the great danger from smoke would be eliminated to some extent.

THEATERS.

During the past two years there has been a marvelous growth of the five and ten-cent vaudeville shows and moving picture theaters, commonly called Nickelos. These small playhouses generally occupy some store room or other small room with only one means of entrance and egress. The most dangerous part of the paraphernalia used in the operation of these theaters are the celluloid films. These are kept in the operator's cage, which is directly above the exit. The danger lies in the fact that the films used are highly inflammable, and if a fire once started in so small a room as is generally used with a number of women and children in the audience a panic would most surely ensue and lives might be lost and injuries sustained.

There is no law governing this class of playhouses. It would be well to pass an act making the operator's cage thoroughly fireproof and licensing all operators. Many of the larger cities in this State are taking the matter up and passing ordinances concerning them. But to protect all the patrons in every town and village there should be a law governing them.

In regard to the regular theaters we have found some that were maintained on the third floors of buildings. In all cases of this nature we have discovered but few exits and their condition was very poor. Again, we find a theater in a two-story frame building. Below this theater is a livery barn and just back of the stage is a haymow. Should a fire break out in this building not one person in fifty could be saved except in some miraculous manner.

Although the above mentioned theaters have been ordered closed by this department, they do not come under the new theater law and some attention should be given to the protection of the patrons of this and other similar places of amusement.

SCHOOL BUILDINGS.

There has been a great increase made in the number of inspections of school buildings during the past twelve months, and many

orders have been issued. In some cases buildings have been condemned for school purposes until made safe and sanitary.

In more than fifty per cent. of the school buildings we find only one stairway from the first to the second floors, and in about eighty per cent. of the buildings we find the furnaces or other heating apparatus under the stairs or halls. In case of fire from heating apparatus all means of exit would be removed. Considering this a very dangerous condition, we have ordered fire escapes on nearly all two and three-story school houses, thus providing "proper ways of exit or means of escape from fire," as required by law.

Since the Collinwood school fire in Ohio, in which over one hundred children perished, public sentiment has been aroused to such an extent that pressing inquiries are being made of this department as to what state office has this matter in charge. We have answered that the only power we possess in this matter is in seeing that the fire exits are ample.

The majority of school buildings are constructed to conform more to the artistic sense rather than the practical—in affording a ready means of escape in case of fire. In the Collinwood fire the exterior escape was on the third floor, and all the pupils on that floor escaped, while most of the children on the first and second floors perished. In view of this disaster the Ohio State Legislature has passed a law giving to the Department of Inspection a deputy who is an architect and who will pass upon all plans of all school buildings to be erected hereafter. As I look at this matter, it would be well for our State to pass a similar law, giving this department the authority to approve all plans for schools to be built and also the authority to condemn all unsafe buildings erected in the past.

A case in point is a school house in southern Indiana. Our attention was called to this matter by one of the members of the Board of Education of that city. When an inspection was made of this building by a deputy the following report was received: "The foundation walls are crumbling out, the exterior walls are badly cracked, the hall floors inside each entrance are so rotten that one could stamp his foot through; furnaces are under the hallway and along the side of the stairs to the basement. Rosin has oozed out from pine boards in the stairway, making them very inflammable. The plastering is off the walls in many places, the rooms dirty and dingy and the basement full of trash. When a storm arises the parents are said to come for their children in anticipation of the dangerous character of the building. This building was condemned at once and ordered to be used no more until made safe and sanitary.

Many other school buildings over the State are equally as unsafe and have been condemned. As there is no law giving any department the power to condemn such school buildings or any similar places, I took the responsibility of condemning them upon myself until they should be placed in satisfactory condition. It is impossible to realize the poor condition of the majority of schools in this State until one has visited them and made a thorough investigation. I would again urge the necessity of a law giving this department the power to condemn all such dangerous buildings.

FOOD PRODUCING ESTABLISHMENTS.

Next to its good morals, the general public is perhaps concerned in nothing so much as the purity and wholesomeness of its food supplies; but the production of pure food, under the most sanitary conditions, our inspectors have found, cannot be accomplished in all cases without compulsory means.

The enactment of laws against the maintenance and conduct of unsanitary food-producing establishments, the constant use of filthy and unwashed utensils, the existence of dirty floors, foul closets and cess pools is not enough to insure respect for such law, nor a clean or wholesome output from all food-producing places.

The sanitation law enacted by the General Assembly of 1903 is a most salutary instrument for the regulation of places that are conducted with no regard for cleanliness and whose daily product reaches the tables of most citizens of this State in some form or other. The careless operator does not fear the law in the absence of the inspector whose return, he figures, will not be soon. Therefore it is important that inspectors make their visits to such establishments more frequent.

The work of the department in the inspection of food-producing places has been fruitful of good results, even though we make only annual inspections.

The following 692 places have been visited by our deputies in the last fiscal year, including 533 bake shops, 53 confectionery manufactories, 35 pickling and preserving plants and 60 butter, milk and cheese factories.

Owing to the fact that the many tomato and vegetable canneries operate only from 60 to 90 days each year, from August to October, it was impossible, with our meager force, to visit more than one-half of such establishments in the State.

NEEDS OF THE DEPARTMENT.

Although the number of inspections made during the past year is far in advance of those made in any previous year, this department still has a field of enormous size left before it. In order to cover the entire State as well as possible we work over the entire territory. We find, however, that in so doing we are unable to make even one annual inspection of plants that should be inspected at least every three to six months.

When an inspection is made and orders issued, a reinspection should be made not later than three months from the date of issue. This should be done in order to determine whether or not the department will have to enforce its orders. With our present small force we find that this is utterly impossible. The larger cities of the State, especially Indianapolis, Hammond, Gary and East Chicago, should be inspected regularly. These latter three cities are growing marvelously, and when their large iron manufacturing industries assume their full proportions the population will have increased fifty to one hundred per cent. From present indications it seems as if these industries will center around these three growing towns. Some provision, then, should be made whereby the manufacturing may be inspected regularly, thus protecting their employes.

Under our present system each of the inspectors have a manifold number of tasks. They are compelled to make inspections, reinspections whenever practical, order and inspect fire escapes, verify all serious and fatal accidents, look after all prosecutions for violations of the law in their several districts and assist the office force in getting ready its annual report. With a larger force of deputies the work, which it is now impossible to perform, could be easily accomplished. With only one stenographer in the office, and she required to perform herculean tasks, it is often the case that orders are from thirty to ninety days late in being sent out, owing to the volume of work to be done.

Illinois, our sister state, has a complete force of thirty-five. Ohio, another sister state, has a force of forty. These two departments look after the inspection of no inland water craft, as does the department in this State. Neither do they look after the inspection of boilers or the accidents to employes, as does this department. The State of Michigan has a force of twenty-five inspectors, Wisconsin a force of sixteen, and Minnesota a force of twelve. The State of Indiana, with her wonderful resources and

numberless manufacturing industries, has only a force of seven to take care of her responsibilities in the protection of her thousands of working inhabitants.

In view of the foregoing facts and the crying needs of the department for more help, we desire that the number of field deputies be increased by eight; six male deputies and two female deputies. Also that the office force be increased by the addition of two stenographers.

Very respectfully yours,

W. E. BLAKELY,
Chief Inspector.

SPECIAL REPORT

ON THE

Explosion of the E. I. DuPont DeNemours Powder Co.

AT

FONTANET, INDIANA, OCTOBER 15, 1907.

DEPARTMENT OF INSPECTION,

INDIANAPOLIS, October 30, 1907.

Hon. J. Frank Hanly, Governor of Indiana:

Sir—I herewith enclose report of the explosion of the E. I. DuPont DeNemours Powder Company's mill, at Fontanet, October 15th, 1907; also copies of the statements made by those employed at the time of the disaster, and a chart showing the exact location of each small mill and magazine, the exact distance between each, and a list of names of the injured and dead.

From conversations had with those familiar with the operation of the powder plant, the following facts have been ascertained:

That about nine o'clock in the morning of October 15th, 1907, the glaze mill of the powder plant, located near Fontanet, exploded. The first explosion was followed by several explosions in the smaller mills, and then the large magazine, where twenty-five thousand to thirty thousand kegs of powder were stored, exploded. This last explosion was the one which inflicted the greatest amount of damage to life and property in this vicinity.

The glaze mill is spoken of as being the most dangerous by those concerned in the operation of the plant. It is located centrally from all the smaller mills. Taking the glaze mill as a center and describing an arc of a circle, with a diameter of about one thousand nine hundred and ten feet, we would enclose almost all the buildings that were destroyed, save only the dynamite magazine, office and keg shop.

It would seem that the force of the explosion and its devastating results traveled to the westward, as very little damage was done the company's property east of the glaze mill, only one of the small mills exploding on the east side. This may probably be accounted for by the greater distance between the smaller mills and the glaze

mill on the east side. The damage done by the explosion of the magazine tends to show that the enormous quantity of powder kept stored there was its direct cause.

The magazine was an enormous one-story building. It was twenty-one feet wide and three hundred and sixteen feet long, constructed of wood, covered with iron, and to minimize the danger, secret nailing with brass nails was used; the floors of all buildings were wire nailed in the same manner for safety. No iron whatever was used. Even the door latches were made of wood and the shoes of the laborers were all pegged. The tracks into all these places were of wood and put down with wooden pins. The cars containing the powder had draw bars of copper and rope and were well insulated.

The dynamite house was fourteen feet long and ten feet wide, with six-inch walls filled with sawdust. There was about twenty thousand pounds of dynamite stored here.

During the minor explosion the magazine took fire and the dynamite partially burned before the remainder exploded. The damage done by this explosion was slight and could hardly be noticed after the terrific explosion of the powder magazine. The dynamite kept in the magazine was for use in the mines, and was not manufactured by the powder company at this plant, and they have at no time more than one carload or about forty thousand pounds in the magazine.

From the statements made it appears that the quantity of keg powder ready for the market was abnormally large. The cause for this state of affairs was the shortage of cars. The railroad company failed to fill an order for cars. Ten cars were to have been placed the day before the explosion.

From all I can learn, there does not seem to be in the minds of any concerned the slightest hint of the cause of the explosion. The theory of the hot box, set forth by the press, seems to have little weight with those who have thoroughly investigated the scene of disaster. Those who have worked with this very machinery scoff at the idea, although they admit that the boxing was hot. They say it was thoroughly cooled and relieved sixteen hours previous to the explosion, and had run cool ever since.

The testimony of Mr. Powell states that the glazing mill was somewhat impaired, but was in fair working order, and that he considered himself safe around the machine. Mr. Powell also states that the shaft outside the building and one of the barrels inside were slightly out of order. He considered the mill perfectly safe.

Mr. Bright was on duty at the glaze mill when the explosion occurred, but had stepped out for his oil can and sack in which to put the powder sweepings, as this was regular duty. He was a careful workman and from all I can learn, he would, at no time, have left his post of duty had he known there was the least danger of any accident happening to the glaze mill during his absence.

He was badly injured and consequently unable to make any statements. He was taken to the hospital, and there died of his injuries.

From my investigations, I find nothing to indicate any exact cause for the explosion. There seems to be in the minds of employer and employes many doubts as to the prime cause, which can never be explained. The explosion, no doubt, will remain a mystery, as no stone has been left unturned in trying to determine its cause.

It seems that the proprietors of the plant had taken some precautions as to the safety of their employes and their property by posting notices concerning the great danger attached to the operation of the different mills. The employes were warned to be careful and not run any machinery that was not in proper order, or with which they were in any way dissatisfied. At the same time they show carelessness and neglect in failing to separate by a greater distance the more dangerous parts of the plant. The enormous amount of thirty thousand kegs of powder should have been distributed uniformly in several magazines, according to the size of the plant and its average output, so that should one part explode, others would not be endangered.

The magazine and glaze mill are certainly too close together for the safety of the employes and the general public. The wheel mills are more liable to explode than all the others, but they rarely do any great amount of damage. That the glaze mill is most dangerous has been thoroughly proved. Its witnesses are the signs of destruction in the surrounding country, the twenty-seven fatalities and twenty-six serious injuries resulting, and twenty-three slight injuries to those not employed in the plant.

In this mill the finishing touches are placed on the powder, making it all ready to be placed in kegs and shipped to the consumers. The powder is placed in eight cylinders, bound in steel, and graphite is sprinkled over it. The power is then turned on and the cylinders revolve. This gives the powder its glossy black appearance and makes it easy to ignite. The power house is situated some

seventy-five feet from the glaze mill and in so far as danger from this source is considered, the bare possibility is nil.

I would suggest and advise that laws be enacted and passed by our General Assembly pertinent to the manufacturing of powder in this State. The distance between all the different dangerous mills and the powder and dynamite magazines should be regulated by law. Also, the amount of powder and dynamite allowed to be stored in any one place. Competent men and those thoroughly versed in the manufacture of powder should be consulted; and the laws formed according to the advice of the most practical and uninterested parties.

The powder industry, though dangerous, is nevertheless a necessary evil and provisions must be made by the State whereby the lives of those connected with the property adjacent to the plants, wherever they may be located, shall be protected in so far as is possible.

Respectfully submitted,

W. E. BLAKELY,
Chief Inspector.

EXHIBIT A.

Tabulated Statement of Inspections Made

BY THE

DEPARTMENT OF INSPECTION OF INDIANA.

1908.

The following is an explanation of figures in column "Orders issued and complied with:"

No. 1. Relates to guarding of machinery and belting.

No. 2. Relates to affidavits, registers, the names of those between the ages of fourteen and sixteen years, and the posting of laws.

No. 3. Relates to toilet, washrooms and resting seats.

No. 4. Relates to elevators, hoisting shafts and stairways.

No. 5. Relates to fire escapes, exits, alarms, and the posting of notices in sleeping rooms, how to reach fire escapes.

No. 6. Relates to air space, water and ventilation.

No. 7. Relates to bakeshop and sanitary regulations.

No. 8. Relates to inspection of boilers or anything pertaining thereto

No. 9. Relates to theater construction.

No. 10. Miscellaneous.

Figures in black-faced type indicate the orders that have been reported as having been complied with.

Notice.—October, November and December are months of 1907.

In column "Boiler Inspected and by Whom," the asterisk (*) indicates an inspection by a boiler maker or engineer authorized by law.

Classification and Summary of Industries.

CLASSIFICATION OF INDUSTRIES.

KIND OF INDUSTRIES VISITED.	No. of Establishments.	Employees.					No. of New Establishments.	No. of Steam Boilers.	Accidents Reported.		
		No. of Males.	No. of Females.	No. of Boys 14 to 16.	No. of Girls 14 to 16.	Fatal.			Serious.	Slight.	
Clay and Mineral Industries.											
Brick, building, pressed and hand.....	58	1,840	4	21	1	86	1	2			
Brick, paving and fire.....	9	347			1	16		1		1	
Brick, hollow and building tile.....	4	148				8		1			
Cement mills.....	7	2,490	5	5		61	5	17		13	
Cement vaults, blocks, weights and posts.....	16	89				3					
Conduits and roofing tile.....	2	260		6		9					
Drain and sewer tile (only).....	30	654	6	2		41		1		1	
Encaustic tile.....	2	333	257	6	10	4					
Glass house pots.....	1	35									
Hard wall plaster.....	6	28				2					
Lime quarries and kilns.....	1	85				7				1	
Mineral wool and asbestos goods.....	3	158	21	1	2	10					
Pottery and tableware.....	7	118	3	1		5					
Stone quarries, mills, crushers and dressing.....	76	4,063	3	25		375	1	7		13	
Terra cotta.....	1	50				2					
Total clay and mineral industries.....	223	10,698	299	67	12	2	629	6	28	31	
Corn and Malt Products.											
Beer, brewing and bottling.....	41	1,829	3	44		108		3			
Beer and soft drinks, bottling (only).....	34	298	20	7	1	15					
Hominy, meal, flake and corn oil.....	10	407	16			21		2			
Starch and corn oil.....	3	532	110	1	4	25		1		5	
Spirits, distilling and rectifying.....	12	379	2	5		69					
Other corn and malt products.....	1	7									
Total corn and malt products.....	101	3,452	151	57	5	1	238		6	5	
Elevators—Freight and Passenger.											
Total elevators, freight and passenger.....	2	88	3			1					
Explosives.											
Dynamite.....	2	270				7					
Fireworks.....	1	25	25	6	5						
Powder, blasting.....	1	25				3	31	25		2	
Torpedoes and shells.....	1	50									
Total explosives.....	5	370	25	6	5	10	31	25		2	
Food Products.											
Bakeries, bread, cakes, etc.....	533	2,236	531	11	16	19	18	1	3	1	
Baking powder.....	1	6	4								
Butter, cheese, milk and ice cream.....	70	499	29			6	58				
Canning, pickling and preserving.....	71	3,683	3,830	80	80	2	112			6	
Confectioners, manufacturing.....	55	481	551	4	33	2	13	1		6	
Infants' food.....	1	3	2			1					
Total food products.....	731	6,908	4,947	95	129	29	202	1	4	13	
Garments and Wearing Apparel.											
Belts, corsets, suspenders and neckwear.....	4	13	143		1						
Skirts, waists, muslin wear, flannelette and sunbonnets.....	24	324	1,590	1	41		3				
Felt footwear and felting.....	1	32	9				1				
Felt and rubber footwear.....	1	1,295	446	25	34		5				
Furs and fur garments.....	5	13	21								
Fur tanning and dressing.....	1	12	13								
Gloves and mittens.....	19	194	1,210	11	42	1	2			1	
Hats and caps, men's and boys'.....	4	72	33	2							
Hats, women's and girls'.....	5	77	284								
Hosiery and knit wear.....	8	698	998	115	144		4				
Merchant tailoring and men's clothing.....	12	547	1,000	17	18		1				
Overalls, jackets and working garments.....	25	293	1,473		12				1	3	
Shirts, men's and boys'.....	11	254	1,556	3	88		5				
Total garments and wearing apparel.....	120	3,824	8,776	174	380	1	21		1

Leather Industries.											
Harness, saddlery, belting, etc.....	28	910	85	2		1	7				
Shoes, heels, etc.....	7	333	229	17	15		2			3	
Tanneries.....	6	103	26				6				
Total leather industries.....	41	1,346	340	19	15	1	15			3	
Metal Industries.											
Automobiles, cycles, parts and repairs.....	47	3,038	130	5		1	15		2	11	
Bar iron and steel mills.....	10	6,243	12	25			107	3	46	13	
Beds, metal.....	10	581	85	48	2		12		3	1	
Bed springs.....	3	79	27	1			4				
Bolts, nuts, lock nuts, wrenches, etc.....	5	463	52	4			3			5	
Bridge and structural iron.....	26	1,391	13	1			24	1	3	2	
Cans, tin.....	2	386	203	51	23		4		1	2	
Carriage hardware, axles, springs, etc.....	1	27	1						1	2	
Cars, railway and track inspection.....	7	7,554	7	41			49	4	28	52	
Castings, brass, copper and aluminum.....	14	235	1				2				
Castings, grey iron (foundries).....	45	2,089	23	4			28		4	3	
Castings, malleable.....	7	1,691	134	16			4		1	1	
Castings, steel.....	4	1,140	5	6			19			4	
Chains and link belting.....	1	30							6	5	
Chandeliers, brackets, etc.....	3	51	5								
Cream separators and machines.....	2	79	4		2						
Drop forgings.....	3	101	1				4				
Dry kilns and dry kiln trucks.....	2	27	3								
Edge tools and dies.....	6	188	3				6		1		
Enamelware, bath tubs, stamp goods.....	1	650	250	24	15		4			1	
Fans, exhaust and ventilating.....	5	396	8		1		2				
Farm tools and farm machinery.....	30	4,562	111	11			43	1	8	3	
Fencing wire, lawn and farm.....	10	501	33			1	1				
Files, steel.....	1	450	50	20			6				
Fire engines, gas, gasoline and chemical.....	20	718	7	2			5				
Furnaces, hot air.....	8	137	6								
Headlights, locomotive.....	1	100	2				1				
Jewelry, manufacturing.....	9	67	28	2	2		1				
Lawn mowers.....	2	235	2	1			2				
Lightning rods.....	1	5								2	
Machinery, boilers, engines, stacks, engine castings and machine shops.....	225	6,171	85	32			94	2	12	11	
Machinery, cable power transmitting.....	1	693	15	1			5				
Machinery, electrical parts and supplies.....	30	2,087	756	25			24		2	9	
Machinery, flour mill and elevator.....	2	295	7	3			8		1		
Novelties, metal, wire and fancy.....	9	151	16			2	2			1	
Plumbers, steam and gas supplies.....	4	91							1		
Pumps, steam and power.....	3	211	5	1			4			5	
Radiators, steam and water.....	4	445	1	3			6			5	
Railway repair shops and roundhouses.....	45	13,175	13	3			143		8	23	
Railway supplies, bolsters, springs, etc.....	1	700					6		1	1	
Safes, locks and vaults.....	4	156		3			4				
Saws, mill, cross-cut and hand.....	5	927	25	45			12			7	
Scales and cheese cutters.....	14	258	20	1			1				
Sewing machines.....	2	175	51	2			1				
Sheet metal goods and ware mfg.....	23	260	13				1		1		
Shovels, scoops and spades.....	2	88	1				2		1	6

Furniture, rattan, go-carts and novelties.	13	938	142	55	9		9			
Hames (wood) and chains.	4	377	35				8		1	4
Handles, "D," long, tool, plow and saw.	31	842	6	10		1	34		5	4
Interior and decorative flooring.	5	249	2	9			9		2	
Ladders, swings, lawn seats, D. and W. screens.	3	142		1			3		1	2
Mouldings and frames.	7	317	15	15	1		3			3
Patterns and models, wood.	8	41	1							
Planing mills (only).	220	2,605	27	12			143		8	6
Pulleys, wood (only).	3	256					5			
Pulleys, paper (only).	1	125	6				2		1	
Pumps, wood.	2	47					2		1	1
Refrigerators.	5	477	3	2		2	5			
Saddle trees.	5	49	3				4			
Saw mills (only).	179	2,642	18	14	4	2	200	2	8	8
Saw and planing mills.	45	634	5	1			52		4	
Showcases and counters.	1	3								
Telephone brackets, pins, etc.	2	91	1				2		1	
Toys, grills and wood novelties.	11	287	44	3			10		2	3
Veneer mills.	25	949	23	36			47		7	1
Washing machines and incubators.	11	155	5				8			
Total woodworking industries.	865	28,263	1,055	542	40	7	893	3	90	93
Buggies, Carriages and Wagons.										
Buggies, wagons and light road vehicles.	98	8,691	371	73			54	1	6	9
Buggy and wagon bodies.	2	85	1	2			3			
Shafts, poles, spokes, rims, hubs, etc.	22	897	8	3			34			2
Tops, cushions and upholstering.	7	173	28	5	1		2			
Vehicle wheels (wood).	7	970	7	30			13		1	2
Vehicle wheels (metal).	3	53								
Total buggies, carriages and wagons.	139	10,869	415	113	1		106	1	7	13
Miscellaneous and Unclassified.										
Artificial limbs.	3	9								
Beekeepers' supplies.	1	4								
Bells, animal.	1	6								
Blue prints.	3	14	1							
Bottle, caps.	1	20	75		20		1			
Box ball games.	1	28	5				2			
Brooms, brushes and brush blocks.	19	337	79	49	7		4			1
Buttons, pearl.	4	288	12				2			
Carpet sweepers.	1	15	4							
Chemicals.	12	631	10				17			
Chewing gum.	1	7	25		3		1			
Cigar lighters.	2	8	12							
Cigars, snuff and tobacco.	120	1,092	1,213	7	41		1			
Coffee and nut roasting, spice, etc.	7	62	70	3	2		2			
Cresosoting blocks, timbers and ties.	5	195					11	1		
Dowel pins.	1	10					1			
Emery and carborundum.	2	17					2			
Fertilizer.	6	40					6			
Fireless cookers.	1	4	1							
Fishing material.	1	2	7							
Flour, feed and grain elevators.	521	2,682	65	1			403	8	2	1
Flux for foundry.	1	5								

Business blocks inspected.....	26
Church buildings inspected.....	21
Hospitals and sanitariums inspected.....	21
Hotels, apartment and lodging houses inspected.....	342
Lodge and assembly halls inspected.....	202
School and college buildings inspected.....	452
Theatres and moving picture buildings inspected.....	190
Total.....	1,254

EXHIBIT C.

Detailed Statement of Accidents Reported

TO THE

DEPARTMENT OF INSPECTION

FOR

Year Ending September 30, 1908.

The following is an explanation of abbreviations used:

Extent of Injury: F.—Fatal; Se.—Serious; Sl.—Slight.

EXHIBIT C—INJURIES.

Office Number	Date of Injury	Name of Injured Person	Age	Head of Family	Cause of Injury.	Nature of Injury.	Extent of Injury per Report.	Supplemental Report.	On Machinery.	Was Cause Guarded?	Time in Days Disabled.	Wages Paid During Disability.	Received from Insurance or Other Sources.	Burial and Medical Expenses.	By Whom Paid.
497	April 7-08	Alexandria. Johnson, Ethel	45	No	Breaking of lamp flue.	Head cut.	Sl.	Sl.	No	6					
151	Nov. 14-07	Bradfield, Emmet.	14	No	Sanding machine.	Bone in hand broken.	Sl.	Sl.	Yes	?	14	\$9 00	?	?	Employer.
188	Dec. 2-07	Hill, William	63	Yes	Mortise machine.	Wrist broken.	Se.	Se.	Yes	?					
263	Jan. 9-08	Coons, William	41	Yes	Stick from turning lathe.	Eye knocked out.	Se.	Se.	Yes	Yes					
342	Jan. 30-08	Chapin, Henry	17	No	Cut-off saw.	Three fingers lacerated.	Sl.	Se.	Yes	?	?	No	\$45 00	?	
475	Mar. 28-08	Grover, Charles	20	No	Rip saw.	Finger amputated.	Sl.	Se.	Yes	?	?	55 00		\$20 00	Employer.
547	April 30-08	Morton, Emanuel	50	Yes	Wiping corrugating press.	End of finger crushed.	Sl.	Sl.	Yes	?	32				Employer.
560	April 17-08	Boyce, Cliff	21	Yes	Thrown down—rod from reel.	Arm broken.	Sl.	Se.	No				98 70		Employer.
702	July 8-08	Braun, Joseph	27	No	Hot water in brew kettle.	Feet and legs scalded.	Se.	Se.			30	?	?	?	?
826	Sept. 12-08	Niccum, Geo. W.	62	Yes	Removing manhead from boiler.	Arm and legs scalded.	Se.	Se.	No	Yes					
		Attica.

EXHIBIT D.

Selections from the Orders Issued

BY THE

DEPARTMENT OF INSPECTION

For Safeguards and Betterments.

Showing the lines along which the Department is working under the several laws committed to it for enforcement.

These orders are revised, corrected and mailed by the Chief Inspector on blanks prepared for that purpose from the office, 91 State Capitol, where all communications with reference to same should be addressed.

EXHIBIT D.

June 2.—Provide a railing around small pit and drive wheel of bolt heading machine in blacksmith shop; cover or countersink the set screws in chucks of nut tapping machine, in machine shop.

May 6.—Have the work benches in front of exit to fire escape removed, and keep exit way clear at all times; also have the corner window, where work benches were removed, made into a door to swing outward.

June 13.—Provide handrails for stairs; provide guard along fly wheel of engine; provide shields or guard around pulleys and belts of extractors; have your boiler inspected at once and every six months thereafter, keeping certificate of such inspection on file in your office and mailing copy of same to this department.

May 30.—Provide knotted ropes and chains in bedrooms Nos. 7, 8, 12 and 13 on third floor and corresponding rooms below on second floor; have all exterior doors made to open outward; provide handrails for all stairs where not provided.

May 30.—Provide fire alarm gongs in all hallways, to be used in case of fire; place notices in each sleeping room above the ground floor explaining the means and ways of escape in case of fire; provide red lights at head and foot of each flight of stairs and at intersection of all hallways.

July 15.—Repair walls and ceiling of bakeshop and have same white-washed at once; paint all wood-work; provide legs and casters for dough trough; scrape and scrub floors and keep same clean; provide cuspidors; post laws and expectorating notices in each workroom.

June 17.—Provide guard or shield for rolls of all dough brakes that are not provided; provide loose pulleys with shifter on south end of shaft, connecting with buffing and emery wheels; provide guard rails along transmission ropes and pulleys; cover or shield inmeshing gears on six barrel mixer; repair male toilet room adjacent to women's toilet, and allow none but females to use both closets on the second floor.

May 22.—Erect fire escape on the south side at the southwest corner of the two-story building at roof, running down onto roof of one-story building, with a drop ladder at the west end of the one-story building to ground; making firmer the main stairway leading down from the fifth to the fourth floor, also from the fourth to the third, also the bannisters around the heads of these stairs; cement the balance of first floor in basement where not cemented; recover steam pipes in basement with asbestos where fallen off; repair roof over bedrooms at west end of building where leaking; provide knotted ropes and chains in all sleeping rooms above the ground floor; provide notices in each bedroom explaining the ways and means of escape in case of fire; provide red lights at the head and foot of

all stairways and at intersection of hallways, where not provided; prohibit any minor under the age of eighteen from operating an elevator; this must be insisted upon or prosecution will follow.

June 6.—Erect fire escape at the two windows on the north side of the south wing at fourth floor, taking in two windows at third floor, one window at second and one window at first, with counter balance stairs to ground; cut windows down leading to fire escape, and making the doors to swing outward onto balcony; provide handrails for north sides of stairs and cover or countersink all projecting set screws on line shaft; have boiler inspected every six months as required by law.

June 19.—Provide hood for swing cut-off saw; cover or countersink all protruding set screws, and cover or shield all low shafting; secure affidavits from all boys that are almost sixteen, and keep same on file in the office and post laws.

July 1.—Cover or countersink the few set screws that are uncovered; cover and shield couplings that are close to journals; provide running boards with handrails over and along line shafts where possible to do so; cover or shield inmeshing gears.

June 10.—Erect an outside iron stairway at the first window from the north end of building on the west side, at second floor, with stairs running down to ground and resting on cement foundation; repair plaster on ceiling of center room of third floor where it has fallen off; repair roof of school where leaking, also the plaster on the north room should be attended to, as it looks like it might fall off at different places.

April 10.—Safeguard the low line shaft in the machine shop in basement of high school building. This may be done by housing or incasing the shaft between pulleys and pulleys and bearing as per accompanying illustration, or by sleeving the shaft with loose metallic (galvanized iron) sleeve between pulleys and shaft bearings (an exposed shaft near floor is dangerous).

June 25.—Erect fire escape at the first window from the south end of building on the west side, at second floor, with a 36-inch stairway running down to ground and resting on a cement foundation. No. 2. Erect fire escape at the first window from the east end of building on the north side, on second floor, with a 36-inch stairway running down to ground and resting on a cement foundation. No. 3. Erect fire escape at the first window from the west end of building on the north side with a 36-inch stairs running down to ground resting on cement foundation; provide handrails for stairways where not provided.

June 2.—Cover or countersink all protruding set screws; cover or shield all low shafting and pulleys (as suggested); provide full complement of gauge cocks on No. 3 boiler.

Please forward the last date of boiler inspection in to this office when found.

June 4.—Erect fire escape on your building as follows: With landing under first window from the south at east end of building (third floor).

running down with landing under second window from the south, same end of building with a 16-inch drop ladder to ground, also one ladder to extend from third story landing to roof, landings to be 42 inches wide, stairs to be 21 inches wide; provide a grate cover over basement window pit where drop ladder extends.

March 21.—Remove superintendent's office from hall on first floor; see that oil is removed from closet under stairway at once; hang door between northeast room and northwest room, same to swing outward; also the door leading from the northwest room into hall; wire stove pipe in third grade room on third floor at this building; place shield around stove in this room. On account of the large number of small children on second and third floors it will be necessary for you to have constructed at once a fire escape on this building, same to be placed near the northeast corner of southeast room, using similar escape as on north end of building; posts must be provided to stairway railing on third floor; these must be farther out on floor so as to shield the first step; provide handrails on both sides of stairway; all doors must swing outward.

April 25.—Have your boiler inspected at once and send copy of report to this office; shield or cover screw conveyors in basement; shield in-meshing gears at end of reels on second floor; house in large belts running through second floor; cover or countersink all projecting set screws in set collars on line and counter shafts.

April 27.—Provide a 54-inch stairway to main room on second floor at southeast corner; make door between hallway in living rooms and show room; provide handrails for stairways; provide asbestos curtain for stage, and water pipes and hose on each side of stage; place exit signs over exits; make exit door under stage as wide as stairway.

May 15.—Have the walls and ceiling of your bakery painted or lime washed; also have woodwork painted; keep your bakery in general in more sanitary condition; provide window screens for windows and cuspidors for bakery as required by law.

July 27.—Cover or countersink protruding set screws in collars on line shaft in power house at machine shop; cover or shield mitre gears on scabbling machinery; cover or countersink protruding set screws in collars on friction gear shaft in same department; house in end of low line shaft in No. 4 power house; cover or shield with guard rail cog gears on each of the powers in each of the power houses; comply with state law in regard to closets for employees.

November 22.—Provide a safety gate on your elevator, one on the first and second floors; also cover or countersink all projecting set screws on your line shaft.

June 24.—On account of the dangerous condition of the walls and foundation of the Breneman school, this building is condemned for further school purposes until new walls and foundations are provided and placed in safe condition.

November 26.—To provide cuspidors for your bakeshop; keep floors in cleaner condition.

July 8.—Provide check chain for swing saw and guard for rip saw; shield end of fly wheel in engine room of oölitic mill; guard emery wheels; cover or shield cog gears on powers in each of the twenty-five power houses; cover or countersink all protruding set screws in collars on line and counter shafts; have boilers inspected at once and every six months thereafter, keeping copy of boiler inspection in your office and mailing copy to this department; post permit for short noon stop.

June 4.—This building is condemned as unsafe and must be abandoned for school purposes. The walls are badly cracked in numerous places on each side of the building, in addition to this the foundation is giving way, and mortar has fallen out between the brick near the ground on all sides to such an extent that the brick are loose and can be pulled out with the fingers. The weight of the roof on the walls in the condition they are is liable to cause them to collapse. This building is in such a shape that it could not well be repaired.

July 30.—Erect fire escape on the south side of hotel, third floor, taking in window in room No. 18, with a 42-inch balcony and a 21-inch stairs running east, taking in the east window in room No. 2 (second floor) with a 42-inch balcony and a drop ladder to ground; placing red lights at head and foot of all stairs and at intersection of hallways; provide fire gongs on each floor; provide knotted ropes and chains in all sleeping rooms above the ground floor, except No. 2 and No. 18. Post in a conspicuous place in every sleeping room a notice giving the location of the fire escape and how to use knotted ropes and chains.

November 12.—Provide shields around the five horizontal punch machines; also a shield around open gear underneath large No. 4 sixty-inch shear machine in steel mill for protection to man working under this shear; provide pipe railings on rear half of large drive wheels of three engines in power house; post state laws; report all accidents to this department.

November 19.—Require affidavits when you hire young persons between the ages of 14 and 16 years to work; provide a person of proper age to operate elevator, also reduce working hours to ten hours a day and not more than sixty hours in any one week, instead of sixty-six hours, as you now have it.

July 30.—Erect fire escape on the third floor as follows: Taking in window in hallway east side of building with a 42-inch balcony and a 21-inch stairs running north, taking in window in hallway, second floor, with a 42-inch balcony and drop ladder to the ground; placing red lights at head and foot of all stairs and at intersection of all hallways; provide fire gongs on each floor; provide knotted ropes and chains in all sleeping rooms above the ground floor; posting in a conspicuous place in every sleeping room above the ground floor notices giving the ways and means of escape in case of fire.

July 16.—Provide good and suitable washing places for employes.

July 13.—Have your steam boilers inspected internally at once and regularly every six months thereafter as required by law; keep one copy of inspection on file in your office and mail duplicate to this department; provide guard for rip saw; provide rubber mats for front and rear of switch board; shield inmeshing gears on lathe; cover or countersink projecting set screws in collars on line shafting in tool room.

November 27.—Cover or countersink all projecting set screws on line and counter shafts; provide guards around belt on engine; repair gauge cocks on your boiler.

March 20.—House in low shafting and pulleys in cabinet shop; provide guards for the two jointers; shield inmeshing gears on two small drill presses, shield counter balance wheel and cog gears on small shears in blacksmith shop, and cog gears on large shears in shear shed, also cog gears on second large shears in east blacksmith shop; shield inmeshing gears on four gauge drill presses; shield cog gears on all axle lathes in lathe department; post permit for short noon stop.

June 4.—Erect fire escape on the northwest corner of your hotel, third floor, taking in door in hall with a 42-inch balcony and a 36-inch stairs running east, taking in balcony (now erected), and a drop ladder to the ground (said balcony now erected being on third floor). Post in a conspicuous place in every sleeping room a notice descriptive of all means of escape; post fire escape notices in hallways; provide proper alarms or gongs capable of being heard throughout the hotel; provide red lights at the head and foot of each flight of stairs and at intersection of all hallways with the main corridor; provide knotted ropes and chains in each sleeping room above the ground floor, said ropes and chains to be arranged to comply with section 5 of the law of 1903.

September 16.—Reduce the speed on the emery wheels (in erecting room) from 1610 to 1400 or less, as these wheels are over-speeded; provide a shield around balance wheel of air compressing engine in wood shop, and shield the inmeshing gears of boiler plate roll and beveling machine gears.

June 17.—Have the four large emery wheels in grinding room connected with exhaust fan; also have the pipes to the other emery wheels in same room repaired and put in good working condition.

April 25.—Scrub and keep the floors of your bakery in cleaner condition, have the walls and ceiling painted or lime washed; scrub and keep utensils, dough troughs, woodwork in cleaner condition; keep bakery in general more sanitary or further prosecution will follow by the department; post sanitary law and expectorating notices in your bakery and keep them posted.

September 16.—Provide a shield around the inmeshing gears of spoke rolling machine and the two notching machines in machine shop, also shield the inmeshing gears of small punch machines in blacksmith shop; provide a railing at rear pit opening in engine room.

June 4.—Provide knotted ropes and chains in each sleeping room above the ground floor, as the law requires; provide notices telling how to use

ropes and chains and the way to fire escape; provide red lights at head and foot of all stairways and at intersection of hallways with main corridor; place one electric fire alarm gong on second and third floors capable of being heard throughout the house.

September 29.—By bolting a shield to under side of "woodworker" table at south end of arbor; house in the low counter shaft rear of planer, and low sticker drive shaft, as suggested to your foreman.

July 15.—Observe the requirements of state law relating to the semi-annual inspection of your steam power boilers; provide a hood or shield over end of mangle shaft near pulley at wall end of mangle in laundry.

Blanks are mailed to you under separate cover for boiler inspection and notices for posting. (You will find copy of the state law on the back of each inspection blank.)

April 23.—By placing (within three days after the date of this order) a shield or safeguard over the horizontal shaft on the east side of your double gear washer, and over the gear on north end of same shaft. Advising this department when the above has been complied with. (The order under date of May 31st, 1907, for the same safeguard is found disregarded.)

September 25.—Provide chains and knotted ropes in each outside sleeping room above the ground floor, such chains and knotted ropes to be fastened with iron bolt through wall over lintel of windows, then coiled in box at side of window; provide one electric fire alarm gong on second and third floor to be rung in case of fire; printed signs in each sleeping room telling how to use knotted ropes and chains and the way to the stairways, also red light at exit to each stairway.

March 20.—Cover or countersink all protruding set screws in set collars on line and counter shafts in all departments; shield or cover cog gears on shears in chain department; shield or cover cog gears on coiling machine in link room No. 1; shield fly wheel to engine; provide rubber mat to be placed in front of switchboard; cover or shield inmeshing gears on small drill press in machine department.

July 14.—Have boiler inspected at once and every six months thereafter as required by law; send copy of report to this office and keep copy on file at mill; provide guard rail around rear of fly wheel; cover or countersink all protruding set screws in collars on line and counter shafts; provide guard or shield for large cutoff saw; report all accidents to this office; post state laws in each workroom.

May 12.—Provide gate at opening of elevator shaft, second floor, building No. 13; also a guard over double fellow saw in wheel room, second floor; shield in the front of lower wheel of re-saw in basement, also connect the two emery wheels in grinding room with exhaust pipes.

July 15.—Replace guard rail along side of belt on No. 3 tube mill; repair covering over screw conveyor to No. 2 dryer housing; cover or shield cog gears at discharge end of No. 3 tube mill; provide guard rail

around motor in griffin mill room, in southeast corner of building; repair guard rail around other motors; cover or shield mitre gears on driving mechanism to all kilns; house in low shafting between each kiln at runway; provide a rubber mat to be placed in front of switchboard in engine room.

July 17.—Provide an asbestos curtain for stage; provide water pipes across proscenium arch so constructed as to make a water curtain; provide two 2-inch standpipes on stage with siamese connections and hose; provide fire axes and fire poles for stage; provide four buckets and two casks (two buckets to each cask), same to be kept on stage full of water during entertainments; these buckets and casks are to be painted red.

August 29.—Safeguard your dough brake and permit no employe to remove same, except for cleaning or repairing them, replacing same. This is final. Your attention is also called to the improper care given to woodwork, machinery and utensils in your bakery, which must be kept clean and sanitary; post laws and notices mailed to you from this department.

September 23.—Erect fire escape on your hotel as follows: Taking in first and second windows from the south on the east end of building at second, third and fourth floors with balcony and stairs, with drop ladder from second floor to the ground; provide chains and knotted ropes in each bedroom above the ground floor, same to be fastened over lintel (top) of window and reach to the ground; provide red lights at head and foot of all stairways and at intersection of hallways with main corridor; have printed notices posted in each bedroom describing the different means of escape in case of fire.

June 30.—Scrub the floors of your bakery and wash clean with soap and water all doors and window casings (the interior siding). The exterior of all utensils in your bake shop shall be scrubbed with water and soap and kept sanitary. Failure to comply with the above order within five days of the date hereof will merit prosecution without further notice.

July 11.—This place today bears no resemblance to its former appearance. Thoroughly cleaned, scrubbed, washed, lime-washed and painted, and all trash removed to outside, and the windows are all cleaned.

July 1.—Provide skirt guard in front of line shaft underneath stitching table, also place a cover over end of same shaft in trimming room; provide a board with cleats on each side to be placed underneath side of drive belt at door between engine and boiler room to protect anyone going through this door and coming in contact with this belt.

September 18.—Provide chains and knotted ropes in each bedroom above the ground floor, same to be securely fastened over lintel (top) of window and reach to the ground; provide red lights at head and foot of all stairways and at intersection of hallways with main corridor; provide proper alarm gongs in hallways capable of being heard throughout the house; provide printed notices in each sleeping room describing the different means of escape in case of fire; have opening in fire escape balcony at third floor made large enough to permit anyone to go down the escape without striking his head against balcony floor.

March 21.—Provide a door between the northwest and southwest rooms on second and third floors, same to be hung so as to swing both ways. It is reported that the plastering on the ceiling is loose. This being the case, you must have all loose plastering removed and new plastering, or better, metal ceiling, put on. The superintendent's office must be torn out of hall on first floor, as it obstructs same and adds greatly to danger from fire, as it is built between the two stairways; have air shaft cleared of paper. Will recommend that some of these stoves be discarded because they are badly cracked; larger zinc mats must be provided for all the stoves.

June 4.—Provide chains and knotted ropes in all sleeping rooms above the ground floor, and east and west windows of hallways, third floor; provide red light at head and foot of all stairways and at intersection of hallways with main corridor; printed signs to be placed in each bedroom and all hallways telling the ways and means of escape; place electric alarm gongs on second, third and fourth floors.

September 30.—Scrape and scrub floors; provide top outward tipping screens to windows; whitewash walls and ceiling; paint all woodwork; pans must be cleaned and kept so; provide cuspidors in your bakery; post sanitary laws and expectorating notices.

You are warned to comply with this order at once or prosecution will follow.

May 29.—Have your boiler inspected every six months, as required by law, keep copy of inspection on file in your office and mail duplicate to this department.

May 30.—Have two fire escapes erected on your high school as follows: One escape embracing first window northeast corner (third floor), taking in first window with a 42-inch balcony and a 21-inch stairs running south, taking in the second window on second floor with a 42-inch balcony and iron stairs running north, extending to a ground landing; No. 2, embracing the first window on the southeast corner, third floor, running west, taking in second window with a 42-inch balcony and stairs 21 inches wide (second floor), these stairs extending to the ground; cut doors between rooms on the second and third floors south side of building.

BIENNIAL REPORT

OF THE

TRUSTEES OF INDIANA UNIVERSITY

FOR THE

FISCAL YEARS ENDING SEPTEMBER 30, 1907
AND SEPTEMBER 30, 1908

To the Governor

INDIANAPOLIS

WM. H. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING
1908

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
November 10, 1908. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, November 12, 1908. }

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

J. C. BILLHEIMER,
Auditor of State.

November 13, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, November 13, 1908.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer November 13, 1908.

HARRY SLOUGH,
Clerk Printing Bureau.

REPORT OF THE INDIANA UNIVERSITY.

BLOOMINGTON, IND., November 9, 1908.

To the HONORABLE J. FRANK HANLY, Governor of Indiana:

Dear Sir—I have the honor to transmit to you the biennial report of the Board of Trustees of Indiana University for the fiscal years ending September 30, 1907, and September 30, 1908.

Respectfully submitted,

BENJAMIN F. SHIVELY,
President of the Board of Trustees.

TREASURER'S REPORTS.

REPORT FOR YEAR ENDING SEPTEMBER 30, 1907.

To the Honorable Board of Trustees of Indiana University:

Gentlemen—The Treasurer of Indiana University presents the following as his report for the eleven months ending September 30, 1907:

RECEIPTS FROM THE STATE

Respectfully submitted,

NAT U. HILL, Treasurer.

REPORT FOR THE YEAR ENDING SEPTEMBER 30, 1908.

To the Honorable Board of Trustees of Indiana University:

Gentlemen—The Treasurer of Indiana University presents the following as his report for the year ending September 30, 1908:

RECEIPTS FROM THE STATE.

Educational levy	\$166,140 83
Interest on endowment.....	35,578 86
Interest on University bonds.....	7,200 00
Total	<hr/> \$208,919 69

RECEIPTS FROM OTHER SOURCES.

Interest on College loans.....	\$1,285 51
Interest from City School Trustees.	132 00
Fees collected	24,033 28
Sundry items	787 16
Trustees City School note.....	1,500 00
Total	<hr/> \$27,737 95
Net income	\$236,657 64
Balance on hand last report.....	33,209 24

DISBURSEMENTS.

Salaries	\$164,413 00
Janitors	4,544 00
Women's gymnasium	41 95
Trustees' mileage and expenses...	1,764 00
Law	310 40
Library assistants	1,544 69
Library equipment	74 60
Library	5,897 32
Engineer's assistants	1,847 03
Geology	184 34
Library building	8,462 05
Law Library help.....	462 01
Education	306 08
Mitchell Farm Station.....	100 51
Physiology	390 23
Art	272 15
Zoölogy	904 83

Respectfully submitted,

EDWIN CORR, Treasurer.

... THE ...

THIRTY-FOURTH ANNUAL REPORT

OF

PURDUE UNIVERSITY

FOR

THE YEAR ENDING JUNE 30, 1908

INDIANAPOLIS:

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING.
1908.

STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
INDIANAPOLIS, October 31, 1908. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 4, 1908. }

The within report, so far as the same relates to moneys drawn from the State Treasury, as to funds from the Federal Government, and also for the funds received from the State of Indiana for the regular fiscal period of the State, has been examined and found correct for the time reported therein.

J. C. BILLHEIMER,
Auditor of State.

DECEMBER 4, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 4, 1908.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer, December 4, 1908.

HARRY SLOUGH,
Clerk Printing Bureau.

LETTER OF TRANSMITTAL.

HON. J. FRANK HANLY, *Governor of Indiana:*

I herewith transmit the report of the President of Purdue University for the year ending June 30, 1908; also the annual financial statements of the Secretary and Treasurer of the institution.

Yours respectfully,

ADDISON C. HARRIS,
President of the Board of Trustees.

To the Board of Trustees of Purdue University:

Herewith are submitted the annual reports of the President and other officers of Purdue University for the year ending June 30, 1908, as required by the Act of Congress of July 2, 1862, under which the institution was organized. The report includes:

1. The organization of the Board of Trustees, the Instructional Corps, the Experiment Station, and the Farmers' Institutes.
2. A brief history and description of the University.
3. A report on the attendance during the year.
4. A report on the work and progress of the University for the year.
5. A report on improvements and additions to equipment, including gifts.
6. The Experiment Station.
7. A report on Farmers' Institutes.
8. The needs of the University.
9. A financial report.

Very respectfully,

WINTHROP E. STONE,
President of the University.

October 30, 1908.

BOARD OF TRUSTEES.

ANDREW A. ADAMS.....	Columbia City
DAVID E. BEEM.....	Spencer
CHARLES DOWNING.....	Greenfield
ADDISON C. HARRIS.....	Indianapolis
GEORGE A. JAMISON.....	LaFayette
SYLVESTER JOHNSON.....	Irvington
CHARLES MAJOR.....	Shelbyville
HENRY A. MILLER.....	Montmorenci
JOSEPH D. OLIVER.....	South Bend

Officers of the Board.

ADDISON C. HARRIS.....	President
DAVID E. BEEM.....	Vice-President
EDWARD A. ELLSWORTH.....	Secretary
JAMES M. FOWLER.....	Treasurer

Executive Committee.

ADDISON C. HARRIS,	JOSEPH D. OLIVER,
CHARLES MAJOR.	

Auditing Committee.

CHARLES DOWNING,	DAVID E. BEEM,
HENRY A. MILLER.	

Committee on Agriculture.

DAVID E. BEEM,	CHARLES DOWNING.
HENRY A. MILLER.	

Committee on Horticulture.

SYLVESTER JOHNSON,	GEORGE A. JAMISON.
ANDREW A. ADAMS.	

CORPS OF ADMINISTRATION AND INSTRUCTION, 1907-1908.

WINTHROP ELLSWORTH STONE, PH. D., LL.D.,
PRESIDENT OF THE UNIVERSITY.

STANLEY COULTER, PH. D., LL.D.,
SECRETARY OF THE FACULTY.

ALFRED MONROE KENYON, A. M.,
REGISTRAR.

EDWARD AUGUSTUS ELLSWORTH,
BURSAR.

WILLIAM MURRAY HEPBURN, A. M., B. L. S.,
LIBRARIAN.

Faculty.

THOMAS GREENE ALFORD, A. M., Professor of Mathematics.

JOSEPH CHARLES ARTHUR, D. Sc., Professor of Vegetable Physiology
and Pathology.

EDWARD AYRES, A. M., Professor of Rhetoric.

CHARLES HARRISON BECKETT, A. B., Assistant Professor of Mathe-
matics.

CHARLES HENRY BENJAMIN, M. E., Dean of Schools of Engineering.

PAUL BRUCE BRENEMAN, B. S., C. E., Assistant Professor of Civil En-
gineering.

SEVERANCE BURRAGE, S. B., Associate Professor of Sanitary Science.

CLYDE BARNES COOPER, A. M., Assistant Professor of English Litera-
ture.

STANLEY COULTER, Ph. D., LL.D., Professor of Biology; Director of
Biological Laboratory; Dean of School of Science.

ROBERT ALEXANDER CRAIG, D. V. M., Professor Veterinary Science.

PAULINE MARIOTTE-DAVIES, Ph. D., Professor of French.

LOUIS EUGENE ENDSLEY, M. E., Assistant Professor of Railway Me-
chanical Engineering.

JOHN WALTER ESTERLINE, B. S., Associate Professor of Electrical
Engineering.

PERCY NORTON EVANS, Ph. D., Professor of Chemistry; Director of
Chemical Laboratory.

ERVIN SIDNEY FERRY, B. S., Professor of Physics.

MARTIN LUTHER FISHER, B. S., Assistant Professor of Agronomy.

- ERNST JACOB FLUEGEL, Ph. D., Professor of German.
- LAURA ANNE FRY, Professor of Industrial Art.
- HARRY OTTO GARMAN, C. E., Assistant Professor of Civil Engineering.
- MICHAEL JOSEPH GOLDEN, M. E., Professor and Director of Laboratories of Practical Mechanics.
- ARTHUR LAWRENCE GREEN, Ph. C., Ph. D., Dean and Professor of Chemistry in School of Pharmacy.
- EDWARD LEE HANCOCK, M. S., Assistant Professor of Applied Mechanics.
- *CHARLES FRANCIS HARDING, S. B., Professor of Electrical Engineering; Director of Electrical Laboratory.
- IVY FRANCES HARNER, M. S., Professor of Household Economics.
- WILLIAM KENDRICK HATT, C. E., Ph. D., Professor of Civil Engineering; Director of Materials Testing Laboratory.
- BENJAMIN MARTIN HOAK, Ph. G., Assistant Professor of Materia Medica.
- JOHN DAVID HOFFMAN, M. E., Associate Professor of Engineering Design.
- OTTO FRED HUNZIKER, M. S. A., Professor of Dairying.
- ALPHA PIERCE JAMISON, M. E., Professor of Mechanical Drawing.
- ARTHUR TABER JONES, B. S., Assistant Professor of Physics.
- ALFRED MONROE KENYON, A. M., Professor of Mathematics.
- WILLIAM CARROLL LATTA, M. S., Professor of Agriculture.
- LLEWELLYN LUDY, M. E., Professor of Mechanical Engineering.
- WILLIAM JAMES LUTZ, M. S., Captain 28th Infantry. *U. S. A.; Professor of Military Science and Tactics; Commandant of Cadets.
- EMMA MONT. McRAE, A. M., Professor of English Literature; Lady Principal.
- **CHARLES PHILO MATTHEWS, M. E., Ph. D., Professor of Electrical Engineering.
- ARTHUR RENWICK MIDDLETON, Ph. D., Assistant Professor of Chemistry.
- THOMAS FRANCIS MORAN, Ph. D., Professor of History and Political Economy.
- HYLON THERON PLUMB, B. S. E. E., M. S., Associate Professor of Electrical Engineering.
- JAMES HARVEY RANSOM, Ph. D., Professor of General Chemistry.
- ROBERT LEMUEL SACKETT, B. S., C. E., Professor of Municipal and Sanitary Engineering.
- JOHN HARRISON SKINNER, B. S., Professor of Animal Husbandry; Dean of School of Agriculture.
- ALBERT SMITH, B. S., C. E., Associate Professor of Civil Engineering.

*From March 15, 1908.

**Died November 23, 1907.

- CHARLES MARQUIS SMITH, B. S., Assistant Professor of Physics.
- WILLIAM WESLEY SMITH, B. S. A., Assistant Professor of Animal Husbandry.
- MOSES COBB STEVENS, A. M., Professor of Higher Mathematics. (Emeritus.)
- JULIUS WILLIAM STURMER, Ph. G., Professor of Pharmacy.
- ERASTUS TEST, M. S., M. D., Professor of Mathematics.
- ALANSON NILES TOPPING, B. S., Assistant Professor of Electrical Engineering.
- JAMES TROOP, M. S., Professor of Horticulture and Entomology.
- RALPH BROWN TRUEBLOOD, M. E., Assistant Professor of Practical Mechanics.
- WILLIAM PAYSON TURNER, Professor of Practical Mechanics.
- CLARENCE ABIATHAR WALDO, Ph. D., Head Professor of Mathematics.
- JACOB WESTLUND, Ph. D., Associate Professor of Mathematics.
- ALFRED THEODOR WIANCKO, B. S. A., Professor of Agronomy.
- GILBERT AMOS YOUNG, M. E., Assistant Professor of Mechanical Engineering.

Instructors.

- WILLIAM HUNT BATES, A. M., Instructor in Mathematics.
- GUY GALLIARD BECKNELL, M. S., Instructor in Physics.
- BEVERLEY WAUGH BOND, Ph. D., Instructor in Economics and History.
- RALPH FLETCHER BOOTH, Ph. B., Instructor in Mathematics.
- GEORGE WILKINSON CASE, B. S., Instructor in Civil Engineering.
- ARTHUR WILLIAMS COLE, B. S., Instructor in Mechanical Engineering.
- CAREY HERBERT CONLEY, A. B., Instructor in English.
- SAMUEL DICKEN CONNER, M. S., Instructor in Agricultural Chemistry.
- OTIS CRANE, Instructor in Poultry.
- EDWARD HATTON DAVIS, S. B., Instructor in Economics and History.
- EDWARD ELIAS, A. B., Instructor in German.
- HOWARD EDWIN ENDERS, M. S., Ph. D., Instructor in Zoology.
- THOMAS TAYLOR EYRE, B. S., Instructor in Applied Mechanics.
- LAWRENCE BRADLEY FIELDS, B. S., Instructor in Practical Mechanics.
- HELEN GOLDEN, M. S., Instructor in Practical Mechanics.
- JOHN TEVIS GUNN, A. M., Instructor in German.
- WILLIAM TEMPLE HECK, B. S., Instructor in Engineering Laboratory.
- JOHN HEISS, A. M., Instructor in German.
- HOWARD LEROY HUTCHINSON, Ph. B., Instructor in Machine Design.
- OSCAR COLMAN KLIPSCH, M. E., Instructor in Mechanical Engineering.
- CHARLES HERBERT LAWRENCE, B. S., Instructor in Mechanical Engineering.

ALFRED OUGHTON LEE, M. D., Instructor in German.
 GEORGE HEYSER LIGHT, A. M., Instructor in Mathematics.
 FRANK STOCKTON MAGILL, A. B., Instructor in English.
 CHARLES CLEMENTS MORRIS, A. M., Instructor in Mathematics.
 GEORGE WESLEY MUNRO, E. E., Instructor in Engineering Laboratory.
 WILLIAM McEWEN NYE, B. S., Instructor in Farm Mechanics.
 PAUL FRIEDERICH REIFF, Ph. D., Instructor in German.
 NELLIE PHILLIPS SAMSON, Instructor in Wood Carving.
 HERBERT HENRY SCOFIELD, M. E., Instructor in Materials Testing Laboratory.
 CAROLYN ERNESTINE SHOEMAKER, M. S., Instructor in English.
 WILLIAM TELFORD SMALL, B. S., Instructor in Electrical Engineering.
 ARTHUR BESSEY SMITH, E. E., Instructor in Telephone Engineering.
 OLIVER PERKINS TERRY, M. S., M. D., Instructor in Physiology.
 CICERO BAILEY VEAL, B. S., Instructor in Machine Design.
 LAWRENCE WILKERSON WALLACE, B. S., Instructor in Car and Locomotive Design.
 LUTHER CORNELIUS WEEKS, B. S., Ph. D., Instructor in Mathematics.
 ARCHER EVERETT YOUNG, A. B., Ph. D., Instructor in Mathematics.
 WILLIAM ARTHUR ZEHRING, A. M., Instructor in Mathematics.

Assistants.

CLARE NEWTON ARNETT, B. S., Assistant in Animal Husbandry.
 VERNON THEODORE BRIGHAM, B. S., E. E., Assistant in Electrical Engineering.
 CLIFFORD DOWNS BUSHNELL, B. S., Assistant in Physics.
 CLAUDE MARSHALL CADE, B. S., Assistant in Practical Mechanics.
 ARTHUR BUDD CARTER, Ph. G., Assistant in Pharmacy.
 DAVID WILLIAM CORNELIUS, A. B., Assistant in Physics.
 LESLIE NOEL DANIELS, B. S., Assistant in Civil Engineering.
 HAROLD SHIELDS DICKERSON, B. S., Assistant in Engineering Laboratory.
 JOHN DEMOSS JARVIS, B. S. A., Assistant in Dairying.
 CLAUDE SYLVESTER JOHNSON, B. S., Assistant in Machine Design.
 JACOB GARRETT KEMP, B. S., Assistant in Physics.
 CHESTER KOLB, B. S., Assistant in Civil Engineering.
 ELBERT CLYDE LATHROP, B. A., Assistant in Chemistry.
 OLIN RAYMOND McBRIDE, B. S., Assistant in Engineering Laboratory.
 ROSS LEROY McLELLAN, B. S., Assistant in Electrical Laboratory.
 JOSEPH PARKE MEHLIG, Student-Assistant in Chemistry.
 CHARLES RUBY MOORE, B. S., Assistant in Electrical Engineering.
 BENEDICT FREDERICK RABER, B. S., Assistant in Machine Design.
 JOHN WILLIAM SCHAFFNER, B. S., Assistant in Practical Mechanics.

JOHN WILLIAM SCHONERT, B. S., Assistant in Practical Mechanics.
 CLIFTON ERVIN SCHUTT, B. S., Assistant in Electrical Engineering.
 ROBERT FRANKLIN SHEPHERD, B. S., Assistant in Practical Mechanics.
 GLENN ALFRED SHOOK, A. B., Assistant in Physics.
 PAUL FRANCIS SHUEY, B. S., Assistant in Physics.
 FRANCIS HENRY SMITH, Sc. M., Assistant in Chemistry.
 THOMAS ANDERSON HENDRICKS TEETER, B. S., Assistant in Civil Engineering.
 JENNIE TILT, B. S., Assistant in Chemistry.
 RAY CYRUS YEOMAN, B. S., Assistant in Civil Engineering.
 LEONARD ERNEST YOUNG, M. S., Assistant in Chemistry.

Shop Assistants.

JOHN JACOB DIETRICH, Assistant in Wood Shop.
 BROOKS BUCKLEY ELLIS, Assistant in Foundry.
 ROYAL BERTRAM GREGG, Assistant in Wood Shop.
 CHARLES ANDREW HAAG, Assistant in Machine Shop.
 FOSTER FURMAN HILLIX, Assistant in Machine Shop.
 JOHN FRANCIS KELLER, Assistant in Forge Room.
 JESSE DAY TRUEBLOOD, Assistant in Wood Shop.
 MORTON TUMEY, Assistant in Foundry.
 JOHN ADAM VAN COURT, Assistant in Wood Shop.

SPECIAL LECTURERS.

In Agriculture.

E. G. ALLEN, Indianapolis Manual Training School.—The Industrial Element in Education. Its Place and Value.
 D. O. BARTO, Department of Extension and Secondary Education in Agriculture, University of Illinois.—Agriculture in the Country Schools.
 DR. J. E. CLOUD, LaFayette.—Government Meat Inspection.
 DR. J. T. W. DUVEL, Department of Agriculture. Washington, D. C.—Why Farmers Should Demand High Grade Seed.
 C. M. HOBBS, Bridgeport, Indiana.—A series of lectures on the Production, Harvesting, and Marketing of Orchard and Small Fruits.
 MRS. MARGARET MATHER ROMINE, Mooresville, Indiana.—Woman in the Home and Community, and Domestic Science in the Rural Schools.
 BERTHA M. MILLER, Franklin, Indiana.—A study of Foods and Principles of Nutrition.
 PROFESSOR JAMES E. RICE, Cornell University.—Modern Methods of Making Money with Poultry, and Education and Experimentation in Poultry.
 C. E. THORNE, Director of the Ohio Experiment Station. Wooster.—Maintenance of Soil Fertility.

In Pharmacy.

THOMAS BURK, Traveling Salesman with Mooney-Mueller Drug Co., Indianapolis.

AUGUST J. DETZER, Traveling Salesman, Mooney-Mueller Drug Co., Indianapolis.

J. K. LILLY, President Eli Lilly & Co., Indianapolis.

MARTIN A. QUINN, A. B., LaFayette.—Pharmaceutical Jurisprudence.

LOUIS H. SCHULMEYER, Chemist with Daniel Stewart, Indianapolis.

J. E. STILZ, with A. Kiefer & Co., Indianapolis.

A. L. WALTERS, Botanist with Eli Lilly & Co., Indianapolis.

In Sanitary Science.

DR. GEORGE W. LAKE, Wolcottville, Indiana.—Sanitation in the Rural Districts.

STAFF OF THE AGRICULTURAL EXPERIMENT STATION.

ARTHUR GOSS, M. S., A. C., Director.

JOSEPH CHARLES ARTHUR, D. Sc., Botanist.

ROBERT ALEXANDER CRAIG, D. V. M., Veterinarian.

OTTO-FRED HUNZIKER, M. S. A., Dairy Husbandry.

WILLIAM J. JONES, Jr., M. S., A. C., State Chemist.

JOHN HARRISON SKINNER, B. S., Animal Husbandry.

JAMES TROOP, M. S., Horticulturist and Entomologist.

ALFRED THEODOR WIANCKO, B. S. A., Agronomist.

GEORGE IRVING CHRISTIE, B. S. A., Superintendent of Agricultural Extension.

JOHN BLACKBURN ABBOTT, B. S. A., Assistant Chemist; Feeding Stuff Control.

WILBUR ANDREW COCHEL, B. S., Assistant in Animal Husbandry.

SAMUEL DICKEN CONNER, M. S., Assistant Chemist.

CLINTON OTIS CROMER, B. S., Assistant Agriculturist.

HOMER JOHNSON FIDLER, Assistant in Dairy Husbandry.

MARTIN LUTHER FISHER, B. S., Assistant Agriculturist.

WILLIAM F. FISHER, Assistant Chemist; Inspection Work.

EARL GILFILLAN HAGADORN, B. S., Assistant in Botany.

*LAWRENCE SHERMAN HASSELMAN, B. S., Assistant Chemist.

OWEN CLIVE HAWORTH, B. S., Assistant Chemist; Fertilizer Control.

HERBERT ANDREW HOPPER, B. S. A., Dairy Extension.

WALTER PEARSON KELLY, B. S., Assistant in Soil Improvement.

*Resigned November 1.

FRANK DUNN KERN, M. S., Assistant Botanist.

HERMAN HARRY MADAUS, B. S., Assistant in Veterinary Laboratory.

EDWARD GEORGE PROULX, B. S., Assistant Chemist; Fertilizer Control.

OTIS S. ROBERTS, B. S., Assistant Chemist; Inspection Work.

GEORGE SPITZER, Ph. G., Assistant in Dairy Husbandry.

LISLE CHARLES WILLIAMS, Ph. G., Assistant Chemist; Inspection Work.

CHARLES GOODRICH WOODBURY, B. S., Assistant Horticulturist.

HISTORY AND DESCRIPTION OF THE INSTITUTION

Purdue University originated in the Act of Congress approved July 2, 1862, appropriating public lands to the various states for the purpose of aiding in the maintenance of colleges for instruction in science and technology.

The State of Indiana accepted the provisions of the act of Congress by an act of Legislature approved March 6, 1865, thus providing for the establishment and maintenance of the institution. Notable donations have been accepted in the same faith from citizens of Tippecanoe County, John Purdue, Martin L. Pierce, Eliza Fowler, and James M. Fowler; also from Amos Heavilon of Clinton County.

Subsequent acts of Congress for the further endowment of the institution have been formally accepted by the legislature of the State, which has also fixed the name and location of the University.

From the first, the institution has been under the control of trustees appointed either by the Legislature or the Governor. These trustees are responsible for all official acts, are subject to removal, and are in the strictest sense *trustees* of the State's interests.

The property of the institution is held in the name of the State and can not be disposed of without legislation.

The plan and purposes of the University are—to provide liberal instruction in those arts and sciences relating to the various industries and professions, and to conduct investigations and disseminate information concerning the principles and applications of agricultural science.

The scope and work of the University are fixed by law as set forth in the five acts of Congress relating to the establishment and endowment of the institution, which have been accepted by the State of Indiana—as follows:

The Act approved in 1862, appropriating lands, states that—

“The leading objects shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts, in such manner as the legislatures of the states may respectively prescribe, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life.”

The Act approved in 1887 appropriates \$15,000 annually for the Experiment Station, and states that—

“In order to aid in acquiring and diffusing among the people of the United States useful and practical information on subjects connected with agriculture, and to promote such scientific investigation and experiment respecting the principles and applications of agricultural science, there shall be established, etc.”

The Act of 1890 appropriates \$25,000 annually for maintenance, with the provision that it—

“Be applied only to instruction in agriculture, the mechanic arts, the English language, and the various branches of mathematical, physical, natural, and economic science, with special reference to their application to the industries of life and to facilities for such instruction.”

The Act of 1906 provides for an increased appropriation

“For the more complete endowment and maintenance of agricultural experiment stations established, or which may hereafter be established under the act of Congress approved March second, eighteen hundred and eighty-seven.”

The Act of 1907 provides further for an increased appropriation

“For the more complete endowment and maintenance of agricultural colleges now established, or which may hereafter be established in accordance with the Act of Congress approved July 2, 1862, and the Act of Congress approved August 30, 1890, the sum of \$5,000, in addition to the sums named in said act, for the fiscal year ending June 30, 1908, and an annual increase of the amount of such appropriation thereafter for four years by an additional sum of \$5,000 over the preceding year.”

In accordance with the provisions of its foundation, the University offers the following courses of instruction:

1. In Agriculture—

Science and practice of agriculture; horticulture; entomology; agricultural chemistry; veterinary science; dairying; animal husbandry.

2. In Applied Science—

Biology; chemistry; physics; industrial art; sanitary science; forestry; household economics.

3. In Mechanical Engineering—

Shop practice; machine design; transmission of power; hydraulic engineering; steam engineering.

4. In Civil Engineering—

Shop practice; railway engineering; bridge engineering; hydraulic engineering; sanitary engineering.

5. In Electrical Engineering—

Shop practice; machine design; electrical engineering; dynamo construction; installation and management of electric railways and lighting plants; telephone engineering.

6. In Pharmacy—

Pharmacy; chemistry; materia medica; prescription practice.

7. The following general departments of instruction are maintained in connection with the above—

English; mathematics; modern languages; history; economics; military science.

Instruction was begun at Purdue in 1874. The first class was graduated in 1875, since which time the instructional work of the institution has been continuous.

Over three thousand students have graduated from the institution, and more than ten thousand have received instruction for a longer or shorter period. The records of graduates show that to an unusual extent they have taken a prominent part in the active industries, of every kind, and are practically contributing to their development and progress.

Tuition is free to residents of Indiana. Nonresidents pay an annual tuition fee of \$25. All students pay certain fixed fees to cover the actual cost of materials and privileges furnished.

The instructional corps of the institution numbers one hundred and thirty-five.

The property of the University consists of 241 acres of land; 17 principal and 12 minor buildings, and a large collection of apparatus, machinery, library, furniture, and live stock, in all valued at \$1,178,000, distributed as follows:

Grounds	\$110,000
Buildings	758,000
Furniture and fixtures.....	30,000
Apparatus and machinery.....	240,000
Library	30,000
Live stock	10,000

Besides its function as an educational institution, the University is charged, by law, with the administration of various other important activities, as follows:

The Farmers' Institutes are under the direction of the trustees of the University, and the superintendent is a member of its faculty.

The Agricultural Experiment Station is an organic branch of the University, made so by both federal and state enactments, and works in close co-operation with the institution.

The inspection and regulation of the sale of Commercial Fertilizers and Commercial Feeding Stuffs is assigned by law to the University and is a part of the regular work of the Experiment Station.

None of these departments has any direct connection with the work of instruction nor can any of the funds provided for their maintenance be applied in any way to the use of other departments of the University.

The University is, therefore, an organized institution of broad scope and great practical usefulness in connection with the scientific and industrial interests of the State. Its efforts are expended in two general directions:

First, as an institution of higher education; second, as a bureau of investigation and dissemination of knowledge.

As an educational institution its field is that of applied science and technology; its courses of study relate chiefly to agriculture and the mechanic arts; its appeal is to the industrial classes, and its effort is to train men and women to an intelligent leadership in the pursuits and professions having relation to the leading industries.

It is the policy of the University, first, without lowering the high scientific and educational standards of its instruction to keep the same in close touch with practical affairs and with the latest industrial progress, in order to give to its technical instruction the greatest possible practical value. Second, to place the facilities of the institution within reach of the great numbers of young persons of limited means to whom such training is of the highest value. Both faculty and officers are thus striving to maintain the University in conformity to the high and useful purpose of its founders.

Purdue University has come to be ranked with the best schools of technology. Of this its rapid growth in attendance from all parts of the country, and the remarkable interest in its work shown by practical business men are most conclusive proofs. Its graduates are sought for in every department of industrial activity and maintain themselves with credit. It is not too much to say that thousands of young men have found at Purdue an opportunity for training which has opened up careers of profit to themselves and of the highest usefulness to the community.

ATTENDANCE FOR THE YEAR 1907-1908.

Summary of Students.

Graduates	59
Seniors	264
Juniors	333
Sophomores	449
Freshmen	575
Specials	35
School of Pharmacy.....	88
School of Medicine.....	184
Winter course in Agriculture.....	102

Total2,089

The following table will show the growth of the institution in respect to attendance since its organization; the respective figures are for the academic year ending June 30, of the years named:

YEARS.	DEGREES GRANTED.					STUDENTS.									
	Bachelors.	Advanced.	Pharmacy.	Medicine.	Total.	Post Graduates.	Seniors.	Juniors.	Sophomores.	Freshmen.	Elective and Specials.	School of Pharmacy.	School of Medicine.	Winter School of Agriculture.	Total.
1875.....	1				1		1		3	9	2				15
1876.....	1				1		1	1	6	8	1				17
1877.....	2				2	1	2	6	6	23	22				60

THE YEAR'S WORK.

The steady increase in the enrollment of students which has been recorded for a number of years past has not diminished. Under ordinary conditions this would furnish cause for congratulation, since it would indicate that the usefulness of the institution was being constantly extended; that a larger number of individuals were being aided in their efforts to obtain an education; and that public confidence in the University was increasing. But, as every report made by the University in recent years has pointed out, its embarrassment, due to the constantly growing discrepancy between the size of the student body and the resources available for its instruction, is becoming a serious one. The time has now arrived when it seems necessary to face the consequences thereof. Such growth as has come to the institution has not been stimulated; it has been genuine, not artificial; it has been attained in the face of constantly increasing obstacles to the entering students, in the form of greater charges and higher requirements. The faculty has deliberately sought to hold it in reasonable check, against its own positive conviction that the institution ought to be able to receive and care for all who come seeking its benefits. Many worthy students have been turned away each year and still the numbers have increased far beyond the capacity to care for them properly.

Our appeals for the necessary means to carry on the work have been granted sparingly or, in the case of the last General Assembly, ignored. The situation, in consequence, has become critical. We face one of two alternatives. Either the resources of the University must be appreciably increased, or the attendance must be appreciably diminished. It would be an unusual event for a public institution to refuse to receive a considerable part of the students applying for admission. A more common practice would be to pay the price for undue enrollment in diminished efficiency; but this latter course is repugnant to educational ideals. Better train fewer persons well than a larger number superficially. It is particularly true of institutions like Purdue that the *quality* of its work must not only be measured by a high standard, but that standard must be constantly elevated in order to keep pace with the increasing demands of the professional and industrial world.

In our efforts to meet these requirements and to care for the rapid increase in students with no corresponding increase in resources, we have undertaken too much. We have gone far beyond the normal conditions for such work as, alone, is admissible for Purdue University. In a later part of this report attention is called to the needs of the institution, but it is necessary here to refer to these conditions as affecting to an important degree the year's record. The increased burdens of the instructors; the crowded conditions of the class rooms and laboratories; the low salaries of instructors which we have been compelled to maintain, intensified by the greatly increased cost of living; all of these conditions may be expected in due time to react unfavorably upon those qualities of devotion and loyalty which have been so characteristic of both faculty and students. To their very great credit, therefore, is the completion of a year's work in which all have shown unusual industry and efficiency, but the work has been done under conditions of pressure and stress which must speedily be relieved in order to escape undesirable results.

Changes in the Corps of Instructors.—The University has suffered the loss of two of the most valued and beloved members of its faculty. Professor Goss, Dean of the Schools of Engineering and Professor of Experimental Engineering, offered his resignation at the opening of the academic year to accept a similar position at the University of Illinois, thus terminating a connection with the University contemporaneous with its most vigorous period of existence. Professor Goss came to the University in 1879 to organize a new department of instruction in engineering. Beginning in a most elementary way, with meager resources and unknown possibilities of development, he built up with conspicuous success the engineering schools of the University, securing equipment, establishing laboratories, developing courses of study, until the fame of these schools, with which his own was inseparably linked, became world-wide. His services as a member of the faculty during the period of rapid growth of the University were of great value. His withdrawal was a serious loss to the institution and to the state, the more to be regretted because undoubtedly influenced by a lack of support of the departments with which he had been identified and to which he had given so much effort.

Professor Charles Philo Matthews, Professor of Electrical Engineering, was compelled by failing health to give up his work early in the academic year and died the following November. He was an unusually successful teacher; a brilliant student of his pro-

fession, and, on account of his gentle and kindly spirit, one of the best beloved members of the faculty by both students and associates. His connection with the University covered twelve years, during the last three of which he was the head of the School of Electrical Engineering.

Professor Charles Henry Benjamin, a graduate of the University of Maine, and for eighteen years Professor of Mechanical Engineering at the Case School of Applied Science, was appointed Dean of the Engineering Schools in place of Professor Goss.

Professor Charles Francis Harding, a graduate of the Worcester Polytechnic Institute, was appointed Professor of Electrical Engineering in place of Professor Matthews.

Further changes in the faculty organization consisted in the appointment of Professor Stanley Coulter to be Dean of the School of Science and Professor John Harrison Skinner to be Dean of the School of Agriculture. Professor William Carroll Latta, who for many years has been senior professor in this school and superintendent of Farmers' Institutes, will hereafter devote his time principally to the duties of the latter position.

Attendance.—The student enrollment showed a growth of about five per cent. for the present year in spite of the increased entrance requirements. The freshman class numbered 575, of which 88 per cent. were graduates of commissioned high schools or schools without the state of an equivalent standing. The total enrollment was 1,905 in the departments at LaFayette and 184 in the affiliated school of medicine, making a total of 2,089.

With very few exceptions, all students were registered in regular prescribed courses, only 35 being enrolled as special students; 59 graduate students were enrolled as candidates for advanced degrees.

Students came from every county in the state and from fifty-one other states and foreign countries.

Statistics have been collected during the past four years, relative to the occupations of fathers of entering students. Of the 1869 that have given such information, 31 per cent. are sons of manufacturers, merchants, or business men; 29 per cent. are sons of farmers; 28 per cent. are sons of employes of various grades, and 12 per cent. sons of professional men. Thus 88 per cent. of these students come from the industrial classes, and it would appear that the University is meeting the obligations imposed by the act of Congress which specifies that its duty shall be "to promote the lib-

eral and practical education of the industrial classes in the several pursuits and professions of life."

Entrance Requirements.—The privilege of entering on certificate has been rigidly limited to graduates of commissioned high schools of the state, or schools of equivalent grade in other states; no certificate being accepted for any portion of the work of undergraduates or for graduates of schools other than those of the above grade. All others have been required to pass the entrance examinations as prescribed. Of the last entering class 88 per cent. were graduates of schools of the prescribed standard. The effect of this requirement is thus shown in the large proportion among applicants of those who have completed high school courses; a result of undoubted benefit to the students, the schools, and the university.

For the coming years the entrance requirements have been further strengthened by including high school work equivalent to 15 units, in the examinations. Of these, ten units, including mathematics, foreign languages, English, history and science are prescribed, and five units are elective with the applicant. Exceptions are made only in the case of applicants who having been deprived of opportunity to complete a high school course, have attained an age and a maturity superior to those of the average high school graduate and have served an industrial apprenticeship, or had a practical experience fairly equivalent to a portion of the high school course.

Care of New Students.—Recognizing that the transition from the secondary school to the college is a critical experience with young people, an effort has been made to bridge over some of the difficulties of the period by such care and supervision as the conditions render possible. New students are met at incoming trains and assisted in finding quarters in approved lodgings; upon registration each student is assigned as an "adviser" a member of the faculty who is expected to stand to him in the relation of a personal friend and helper. Soon after the opening of the college year a series of lectures upon "health and efficiency" were given to new students by members of the faculty, and these were found to be exceedingly helpful. Without doubt, wise aid and supervision of new students during the first months at college will go far toward reducing the number of failures.

Teachers' Training Courses.—An act of the General Assembly of 1907 requires, in order to qualify as teachers in the public schools of the State, that the applicant have had professional train-

ing in pedagogical subjects. While a comparatively small proportion of our graduates have engaged in teaching, an appreciable number have done so, and the present growing interest in the introduction into the public school courses of such subjects as agriculture, manual training, and domestic science will create a demand for persons who have taken their training at Purdue. It becomes important, therefore, for the welfare of our graduates, that they be prepared, both technically and professionally, to meet this demand. With such preparation in view, a department of education has been established to administer courses in pedagogical subjects to those of our undergraduates who contemplate entering the teaching science, particularly in those technical lines characteristic of Purdue's curriculum. The department has been placed in charge of Professor George L. Roberts, A. B., an experienced teacher and a student of educational science who has been for many years identified with the public school work of the State.

Extension of the Course in Pharmacy.—The course in pharmacy which has heretofore consisted of two terms of nine and seven months respectively, ending about April first of each year, on recommendation of the faculty, has been lengthened to two full terms of nine months each. The degree for the completion of the course has been changed from Graduate in Pharmacy (Ph. G.) to Pharmaceutical Chemist (Ph. C.). These changes conform to the practice of the best schools of pharmacy and to the tendency toward the raising of the standard of these schools.

It is to be hoped that the time is not remote when the legal and educational requirements for pharmaceutical practice will not be less than those in the field of medicine.

Agricultural Extension.—A growing and valuable feature of the work of the University is that of popularizing and extending its teachings, particularly in agriculture. Without special organization, some efforts in this direction have long been in operation. The farmers' institutes were the first formal attempt in this field; later there were undertaken at the University "short courses in agriculture," and more recently such activities as corn trains, fruit trains, district corn schools, scientific and educational exhibits, popular excursions to the University and Experiment Station, boys' corn clubs, co-operative experiments, etc., etc., have been expressions of the desire to disseminate information and stimulate an interest in educational principles, among the farmers.

The ready and enthusiastic response which these efforts have met indicates the importance of this work as a means of contribut-

ing toward better conditions in agriculture. It demonstrates, moreover, that the whole scheme of agricultural education, to which so much attention has been given in this country during the past fifty years, made the mistake of starting at the end rather than the beginning. Farmers have been slow to recognize the need of a costly education, but they instantly appreciate the value of a simple demonstration which illustrates a better method or proves the worth of special training in their business.

In a similar way, the Experiment Stations are learning to interpret their experiments into simple and practical terms, and the immediate growth of interest in their work is remarkable.

It is evident that the impress to be made on an industry by teaching the comparatively few who can afford the time and money for a prolonged course of training must be extremely slow. There must be something more than formal instruction at a college; there must be an effort to bring knowledge and inspiration to the industrial workers themselves. This is the purpose of the variety of efforts now being made by the University which may be referred to as "Agricultural Extension." It is estimated that over 100,000 persons directly connected with farming are reached, annually, in this way, and its great value and importance have been fully demonstrated.

Thus far this work has been carried on without special support or organization; it has now become too large an undertaking to be maintained as an incident subordinate to the other branches of the University which on their parts have neither the men nor the means to devote to it. Some of the concrete things which are being done or might with great benefit be undertaken, are: Conducting special educational trains; participating in the instruction at farmers' institutes; organizing boys' corn clubs, as already undertaken in thirty counties; organizing and conducting district "short courses of instruction"; preparing educational exhibits for fairs and institutes; co-operating with the movement for better rural schools; publishing leaflets and bulletins for the use of teachers of agriculture and domestic science in the public schools; furnishing lectures and demonstrations for teachers' institutes; organizing excursions on the part of schools and gatherings of farmers at the University and Experiment Station.

All of these lines of endeavor would be productive of good results; some are already being successfully undertaken; but without means available for the work it can not be greatly extended.

It should at once have definite organization and support commensurate with its importance.

Alumni.—The death of the first graduate of the University—John Bradford Harper—is recorded with extreme regret. Mr. Harper received the degree of B. S. in 1875, being the first student to complete a course of study and receive a diploma. For many years he had been connected with the Indian Bureau and more recently was transferred to the Department of Agriculture, in which, as irrigation engineer, he was in charge of important public works at Durango, Colorado, where he died on March 26th. Mr. Harper was a man of high standing in his profession and one who in every relation reflected credit upon his Alma Mater.

The interest of the alumni continues to grow in a gratifying manner; 235 were registered as in attendance upon the commencement exercises, and contributed to the marked success of that occasion. Several new alumni organizations have been established during the year, and such now exist in the following centers: Fort Wayne, Indianapolis, South Bend, Chicago, Cincinnati, Cleveland, New York, Pittsburg, Schenectady, Seattle, St. Louis, and Washington, D. C.

Two bulletins upon matters of interest to the alumni were published by the University during the year.

Degrees Granted.—Three hundred and twenty-eight degrees were granted by the faculty, as follows:

Baccalaureate Degrees—

Bachelor of Science	12
Bachelor of Science in Agriculture	15
Bachelor of Science in Pharmacy	1
Bachelor of Science in Mechanical Engineering	75
Bachelor of Science in Civil Engineering	78
Bachelor of Science in Electrical Engineering	76

Graduate Degrees—

Mechanical Engineer	6
Civil Engineer	11
Electrical Engineer	5
Doctor of Engineering.....	1

Graduates of School of Pharmacy—

Graduates in Pharmacy.....	48
----------------------------	----

Sixty-two certificates were given to students who had completed courses in the winter school of agriculture.

Nine certificates of proficiency in military science were given to members of the senior class who had completed the four years' course in the military department.

The honorary degree of Doctor of Engineering was bestowed, in connection with the commencement exercises, upon Mr. Angus Sinclair of New York, Editor of the *Railway Review*, "a native of Scotland; adopted son of America; learned in the history and practice of engineering; editor and author of many standard treatises on railway engineering; and influential leader and counsellor in engineering science."

No better evidence as to the character of the work performed by candidates for these degrees can be given than to submit a list of the titles of theses prepared by students in the schools of Science, Agriculture and Engineering as a condition of graduation. These in all cases represent a piece of individual study, research, or investigation, the key to which was given in a problem assigned by the department in which the work was performed. It will be noted that the subjects studied cover a wide range of topics, many of which are of great importance to the public welfare. It is an inevitable inference that men and women trained in so many diverse lines can hardly fail to render intelligent and helpful service in the progress of the communities in which they live.

Titles of Theses of the Class of 1908.—

A Study of the Forest Methods of France.

Francis Parkman as a Literary Artist.

A Study of the Anatomy of the Slug-Limax Maximus.

Extraction of Tannin from Leather.

High Explosives.

Prescott and the Spanish Conquest in the New World.

The Decay and Preservation of Timber.

Composition of Creosote Oil.

A Critical Study of the Oaks of Indiana.

Butter and Butter Substitutes.

A Study of Mendelism from a Zoological Standpoint.

The Pollution of the Wabash River at LaFayette.

Criticism of Certain National Formulary Preparations.

A Study of the Organic Matter and Humus Content of the Crop Rotation

Experiment Plots at the University Farm.

A Study of Various Methods of Feeding Horses.

A Study of the Effects of Various Systems of Crop Rotation on the Productiveness of Soils.

A Bacteriological Study of Hog Cholera in Indiana.

The Tuberculin Testing of Dairy Cattle in Indiana.

Methods of Beef Production Involving Long and Short Feeding Periods.

The Effect of Pasteurization of Sour Cream at Different Temperatures on the Quality of Butter and the Per Cent of Fat in Buttermilk.

A Study of Various Supplemental Feeds in Connection with Corn in Pork Production.

- A Study of Farm Management in Union Township, White County, Indiana.
- A Study of the Physical Properties of Some Typical Luzon Soils.
- A Determination of the Efficiency under Different Speeds, of an Otto Gas Engine using Artificial Gas.
- A Test of the Power Plant of the LaFayette Box Board Works.
- Efficiency Test of a Fairbanks-Morse 50 H. P. Suction Gas Engine Plant.
- Commercial Efficiency Tests of a 250 H. P. Stirling Boiler under Operating Conditions, in the Purdue Power Plant, using Slack Coal.
- Efficiency Test of the Merchants' Heating and Lighting Plant, LaFayette, Indiana.
- Comparative Efficiency Tests of a 20 H. P. DeLaval Turbine with Saturated and Superheated Steam.
- Commercial Efficiency Tests of a 250 H. P. Stirling Boiler under Operating Conditions in the Purdue Power Plant, using Lump Coal.
- A Study of Commercial Carburetors with Comparative Engine Tests on a Continental Two-Cylinder, Four-Cycle Automobile Engine using Gasoline.
- Quantitative Thermodynamic Study of Air in its Course through the Ingersoll and Type Ten Compound Air Compressor.
- Tests of a White Automobile.
- Performance of Locomotive Schenectady No. 2, Cole Superheater "B" at Different Cut-Offs under a Boiler Pressure of 160 Pounds, Speed of 30 Miles per Hour and Full Throttle.
- Efficiency Tests of a Buckeye Engine under Different Loads.
- Tests of a Pope-Toledo Automobile.
- Performance of Locomotive Schenectady No. 3, Cole Superheater "B" at Different Cut-offs, under a Boiler Pressure of 240 Pounds, Speed of 30 Miles per Hour and Full Throttle.
- A Determination of the Efficiency under Different Points of Ignition and Speed of a Continental Two-Cylinder, Four-Cycle, Automobile Engine using Gasoline.
- The Design of a 2,000 H. P. Power Plant for the Santa Fe Railroad Shops at Topeka, Kansas.
- A Study of Explosive Mixtures of Gasoline and Air, and Alcohol and Air.
- A Determination of the Efficiency, with Varying Amounts of Cylinder Injection Water, of a Fairbanks-Morse Internal Combustion Engine using Gasoline.
- A Determination of the Efficiency under Different Points of Ignition and Different Clearances, of an Auto Gas Engine using Artificial Gas.
- Tests of a Model Hot Water Heating System in the Purdue Engineering Laboratory.
- The Design of a 2,500 K. W. Electric Power Station.
- Efficiency Test of a Fairbanks-Morse 50 H. P. Suction Producer Gas Plant.
- Performance of Locomotive Schenectady No. 3, Cole Superheater "B" at Different Cut-offs, under a Boiler Pressure of 200 Pounds, Speed of 30 Miles per Hour and Full Throttle.
- A Determination of the Efficiency under Different Points of Ignition and Speed of a Yale Four-Cylinder, Four-Cycle Automobile Engine using Gasoline.

Performance of Locomotive Schenectady No. 3, Cole Superheater "B" at Different Cut-offs, under a Boiler Pressure of 120 Pounds, Speed of 30 Miles per Hour and Full Throttle.

Deformation of Locomotive Drive Wheels.

A Determination of the Efficiency, under Different Clearances, of a Fairbanks-Morse Internal Combustion Engine using Gasoline.

Tests of the Heating and Ventilating System in Fowler Hall.

A Determination of the Efficiency under Different Points of Ignition, of a Fairbanks-Morse Internal Combustion Engine using Gasoline.

Tests of a Motor Cycle.

Modernizing the Power Transmission System in the Box Shop of the Modes-Turner Glass Factory, Terre Haute, Indiana.

Economy Gain in Re-heating Steam in a Harris-Corliss Compound Engine.

Design for a Subway for Main Street Crossing of Wabash Railway at LaFayette, Indiana.

Design of a Sewerage System for North LaFayette, Indiana.

Water Supply for Markle, Indiana.

Tests of Model Concrete Arches.

Sewerage System for a Portion of Michigan City.

Calibration of Weirs in Hydraulic Laboratory.

Tests of Various Types of Cast Iron Water Pipe.

Design of a Highway Bridge over Wabash River at Orphans' Home Ferry, near LaFayette, Indiana.

Water Power of White River at Noblesville, Indiana.

Survey of Fort Ouiatenon.

Design of Reinforced Concrete Railway Girder.

Water Power Development at Cataract, Indiana.

Construction of Timber-Treating Plant.

The Design of a Highway Bridge over the Wabash River near Newport, Indiana.

Design of Reinforced Concrete Gymnasium for Purdue University.

Location, Estimate, and an Economic Study for a Proposed Railway from Dayton to Americus.

Design of a Track Lay-out for a Union Station at LaFayette, Indiana.

Provision for Shear in Reinforced Concrete Beams.

The Design of a Reinforced Concrete Reservoir.

Location, Estimate, and Economic Study of a Through Freight Cut-off on L. E. & W. R. R. at LaFayette, Indiana.

Design of Interurban Bridge over Wabash River at Main Street, LaFayette, Indiana.

Test of Reinforced Concrete Hollow Tile Floors.

Train Resistance of an Interurban Car.

Design of a Reinforced Concrete Highway Bridge.

Gauging the Wabash River at LaFayette, Indiana.

A Study of Sand Moulding for Concrete Forms.

Design of Derrick Crane of 40 Tons Capacity with Swing Radius of 50'-0".

Design of Single Track Railway Bridge over the Wabash River.

The Design of an Electric Railroad Bridge over Wildcat Creek.

Design of a Highway Bridge over Wabash River.

Investigation of Shearing Strength of Rivet Steel while under Tension.
 Relocation of Wabash Railroad through LaFayette, Indiana.
 Examination of Concrete Aggregates found at James Lake, Indiana.
 Proposed System of Street Improvement for Delphi, Indiana.
 Design and Erection of Steel Frame work for 150'-0" Dome.
 Water Supply for Imlay, Nevada.
 A Comparison of Notable Bridge Failures and the Causes Assigned.
 The Design of a Telephone Wire Plant for the City of Delphi, Ind.
 A Test of a Storage Battery Sub-station of the Kokomo, Marion and Western Traction Company.
 An Economy Test of the Plant of the Indiana State Soldiers' Home.
 Design of a Motor Equipment for a Confectionery Company.
 Investigation of Carbon Contact Resistance in Telephone Transmitters.
 A Study of Methods of Rail-bonding.
 Electrical Test of Merchants' Electric Lighting Plant, LaFayette, Indiana.
 Service Test of an Interurban Car.
 Experimental Investigation of Oils for Insulating Purposes.
 Efficiency Test of a $7\frac{1}{2}$ K. W. Gasoline Engine-Driven Generating Unit.
 An Experimental Study of Commutation with a View to Determining Contact Resistance.
 Study of Electrolytic Action of Structural Steel Imbedded in Concrete Block with Alternating Current.
 Study of Electrolytic Action of Structural Steel Imbedded in Concrete Block with Direct Current.
 Tests with a Load Curve Meter.
 Efficiency Test of an Electrical Process of Nitric Acid Manufacture.
 Service Tests of a City Railway Car.
 Study of Pole Line Construction.
 Test of the LaFayette Home Telephone Company's Plant.
 Complete Test of a Century Single-phase Motor.
 Braking Test of an Interurban Car.
 Complete Test of a Three-phase Induction Motor.

The Medical School.—The third year of affiliation between Purdue University and the consolidated Indiana Medical School was inaugurated without material change in previously existing conditions. The school at Indianapolis enrolled 184 students and proceeded in its work without special incident. The work of instruction was more efficient than before and faculty and students were more loyal than ever to the school and its purpose—that of ultimately establishing a single State school of medicine. The attitude of Indiana University also remained unchanged. The general consensus of opinion found expression in a growing feeling that existing conditions, viz., a conflict between the two State institutions of higher learning and two rival departments of medicine could lead to no desirable results. In an earnest desire to come to some settlement of this controversy, which should be for the best interests

of the State as well as of the institutions concerned, the trustees of the two universities met in conference in April and engaged in a thorough and frank discussion of the situation. In this Purdue University contended for one medical school at Indianapolis, to administer a complete medical course and to be entirely under the care of the State; Indiana University desired to have exclusive control of medical education in the State, with a preference for maintaining only the last two years of the course at Indianapolis. A final agreement, in which both parties were glad to sacrifice something in furthering the main purpose, was effected, and the following statement was issued over the signatures of the President of Purdue University and the President of Indiana University:

"The efforts of Indiana University and of Purdue University to promote medical education in the state in co-operation with the members of the profession and with existing proprietary medical schools, have been undertaken in good faith and with the one aim of establishing this important branch of professional training upon a sound educational basis.

Indiana University has sought for many years to establish and develop such a department, in which efforts it has encountered many obstacles but has made continuous progress. Purdue University entered this field only when convinced that a service could be rendered to the profession and to the state by a tender of its offices in consolidating existing forces and aiding in the evolution of a single, strong medical school at Indianapolis under the auspices of the state and with the co-operation of other educational interests, a task which was undertaken only after it seemed that other efforts in this direction had failed.

Out of these efforts by the two institutions had grown an unfortunate controversy which operated to confuse the situation and to becloud in the minds of the public the true relations of the universities. In the belief that the present conditions are delaying the educational progress and interfering with the highest functions of the two universities, the logical conclusion follows that the two medical schools now in Indianapolis under the direction of the two universities should be united into one school, and that this should be under the exclusive control of one or the other of these institutions.

Since Purdue University has at no time regarded a department of medicine as an essential part of its program and, on the other hand, Indiana University believes that it has been especially charged with the responsibility for such instruction, the latter institution has been selected to proceed in the matter, and the trustees of the two universities have this day mutually agreed to the following conditions, to which the faculties of their respective medical schools assent, namely: to a union of the two medical schools under the direction of Indiana University; to a selection of the faculty of the new school with due regard to the members of the present faculties; and to the maintenance of a complete medical course in Indianapolis, as well as the two year course in medicine at Bloomington.

Only in this way does it seem feasible to accomplish the ultimate purpose of developing for the state a sound system of medical education which

has been the aim of both parties in their efforts in the field, as well as to promote those harmonious and friendly relations so essential to the proper discharge of the functions of both institutions.

It is hoped therefore that the citizens of the state, whether remotely or intimately interested in this question, will accept the above decision as evidence of the disinterested motives of these institutions and their desire to serve the state with undiminished energies."

When this program shall have been finally approved by the State, there will be completed a series of progressive steps long hoped for by the medical profession and much to be desired in promoting the welfare of medical education in Indiana, viz.: a unification of conflicting and rival proprietary medical schools into a single central institution offering a complete course in medicine in connection with the clinical facilities found in Indianapolis, and the incorporation of this single school as an organic part of the higher education under State control.

In bringing about this end, Purdue University has had a creditable part. To ultimately retain control of the state school of medicine has been no essential feature of its program, but rather to aid in serving the substantial ends which now seem to be attained. While at times misunderstandings and conflicts have arisen, these, in the end, have served only to clarify and strengthen the natural, harmonious relations between Purdue University and its sister institution, Indiana University.

Public Lectures and Entertainments.—During the year a considerable number and variety of lectures, addresses, and entertainments were given at the University under the auspices of one or another organization. For the most part these affairs were educational in plan and purpose, and contributed in no small degree to the intellectual recreation and development of the students. Members of the faculty had a prominent part in these programs, and many others not connected with the University have given generously of their time and ability without compensation. To all these grateful acknowledgment is due on behalf of the institution.

1. At the University weekly convocations, held on Wednesday mornings at 11 o'clock, in addition to members of the faculty the following persons have spoken:

President H. B. Brown, Valparaiso University.

Dr. J. N. Hurty, Secretary of the State Board of Health.

Professor James A. Woodburn, of Indiana University.

Rev. J. W. Foster, of Boston.

Mr. E. C. Mercer, of New York.

Mr. Kiyo Sue Inui, of Kobe, Japan.

2. Two lecture courses were conducted under faculty management.

(a) The first included lectures by the Rev. William J. Dawson, President Henry C. King, Professor William R. French, and Professor Brander Matthews.

Impersonations by Leland C. Powers, and

Concerts by the Jacoby Concert Company, the Skovegaard Company, and the Kneisel Quartet.

(b) An illustrated course of four lectures on travel in foreign countries, by Frank R. Roberson.

3. Under the auspices of the Students' Y. M. C. A., a series of addresses were given by the Rev. O. R. McKay, of Lafayette; H. E. Dodge, of Terre Haute; C. D. Hurrey, H. A. La Flamme and E. C. Mercer.

4. The Engineering Assembly, organized by the instructors of the engineering schools, provided a series of addresses in technical subjects. In addition to members of the faculty, the following gentlemen contributed to this program:

E. G. Acheson, of the International Graphite Company, Niagara Falls, N. Y.

A. H. Armstrong, Assistant Engineer Railway and Traction Department of the General Electric Company, Schenectady, N. Y.

Willard Beahan, Lake Shore & Michigan Southern Railroad Company.

Professor C. F. Burgess, University of Wisconsin.

T. L. Condon, Civil Engineer, Chicago.

Professor R. H. Fernald, Case School of Applied Science.

J. R. McColl, American Blower Company, Detroit.

Ralph Modjeski, Consulting Engineer, Chicago.

George M. Newcomer, of Schmidt & Co., Cement Manufacturer, Philadelphia.

Professor H. H. Norris, Cornell University.

Professor S. W. Parry, University of Illinois.

M. W. Priseler, Ingersoll-Rand Co., Chicago.

Isham Randolph, Consulting Engineer, Chicago.

C. E. Skinner, Chief of Research Department, Westinghouse Electric and Manufacturing Co., Pittsburg.

Professor J. C. Thorpe, University of Illinois.

M. B. Wishard, American Bridge Co., Chicago.

5. Miscellaneous addresses were given as follows:

Hon. William Jennings Bryan, address before the University.

Mr. Clifford H. Easton, New York, Lecture on Explorations in Labrador.

Professor C. J. Keyser, Columbia University, Address on Mathematics.

Mr. Charles Vanderkleed, of Philadelphia, Address to Graduates in Pharmacy.

Bishop Charles P. Anderson, Chicago, Baccalaureate Address.

Dr. Harvey W. Wiley, Washington, D. C., Commencement Day Address.

The students' organization known as The Harlequin Club successfully presented a musical play written by Mr. George Ade, '87, and entitled "The Fair Co-Ed."

During Commencement Week, the Donald Robertson Players of Chicago presented two plays, "The Triumph of Youth" and "A Blot in the 'Scutcheon," under the auspices of the Senior Class.

Research.—In an educational institution concerned largely with the natural sciences and their applications, the work of research is second only to the work of instruction.

It has, therefore, become a recognized policy at Purdue not only to instruct students in the sciences and their application, but to be constantly engaged in efforts to solve some of the many problems which are of importance in the industries, the business, and the life of its constituents. In the conduct of such investigation the student frequently has some active share and always an interest. The results are contributions to the world's knowledge, published and disseminated without cost, and available to all without restriction.

The value to Indiana of an institution like Purdue University is only partially expressed through its courses of instruction. It serves its purpose equally through the utilization of its forces, its equipment, and its men in the study and solution of unknown or heretofore unsolved problems. The range of such work as undertaken at Purdue in a single year is wide, extending from the most practical questions in agriculture to researches in pure science and including public health; to the undeveloped resources of the state; to transportation, manufacturing, engineering and social economy. Beside these researches, thousands of inquiries are answered, advice is given, expert testimony or opinion submitted, and tests, analyses, and examinations made for private parties.

This phase of the University's activities is one concerning which the general public is but imperfectly informed. It should, however, conceive of the institution as a great bureau with two principal phases of effort; the one instructional, the other the utilization of its scientific forces in the service of the community in the way of study, research, and advice.

Some of the more important undertakings of this kind during the year, aside from the work of the Agricultural Experiment Station, which is described elsewhere, may be outlined as follows:

The investigations of locomotive performance, for which the Carnegie Institute made two grants to Professor W. F. M. Goss, were continued during a portion of the year and brought to a satisfactory conclusion so far as the immediate subject under consideration, viz., "the use of steam-heating devices," was concerned.

The department of forestry has studied the rate of tree growth under varying conditions; the propagation of native forest trees by seeds and cuttings; the afforestation of the hill regions of southern Indiana; and has continued the critical study of the oaks.

In the bacteriological laboratory much attention has been given to the study of the opsonic theory in connection with which many cases have been treated with opsonic vaccines.

The department of physiology has conducted studies upon the rhythmical contractions in the marginless bell of *Gonionemus* produced by hydrogen peroxide; and on the effect of anaesthetics upon the catalytic activity of the blood.

A representative of the zoological department has studied in the laboratory of the U. S. Fish Commission at Beaufort, N. C., the extent and condition of clam beds of that region; also the problem of the artificial propagation of the clam.

In the botanical department the research on North American rusts has continued with noteworthy success. This work has now been in progress for a number of years and the accumulated material and data give to it a unique prestige in botanical science. While purely scientific in character, the ultimate value to agriculture of an accurate knowledge of the life history of these destructive forms can not be overestimated.

In the mechanical engineering laboratory investigations have been conducted upon the area of contact between car wheels and rails; the deformation of locomotive drive wheels; strength of rivet steel in shear or under tension; the effect of jacketing on a compound Corliss engine; the effect of superheating on a DeLaval steam turbine; the effect of increasing the steam pressure in a

Buckeye engine; the effect of interchange of heat in the air cylinders of a two-stage air compressor; and an investigation of the relative economy in using slack and lump coal.

In the department of electrical engineering studies have been made of the relative accuracy of various methods of magnetic testing of iron and steel; on the action of transmitter carbons; on the action of telephone bells; conditions governing the action of the Rowland dynamometer; and the operating characteristics of mercury arc apparatus.

In the materials' testing laboratory a preliminary investigation has been conducted in the methods of testing concrete arches; also a continuation of the investigations of the behavior of steel under combined stresses; and tests of reinforced concrete floors to determine the best disposition and shape of steel bars.

The timber testing station of the U. S. Forest Service, maintained in connection with the testing laboratory, has been continuously engaged in its studies of physical conditions of native timber woods, in which from five to twelve assistants have been employed and a large number of specimens examined.

The Engineering Review, No. IV, 1908—

An annual of 174 pp., with illustrations and index to Vols. I, II, III, and IV, containing 32 articles by students, instructors, and graduates; published by a board of editors representing the engineering societies.

Beside their activities in teaching, in the conduct of the routine work of the faculty, and in investigation, many members of the University force are called upon for lectures; others take an active part in the work of educational, scientific, and technological societies; others are editors of proceedings and journals; and some are members of important state boards. Thus, in the aggregate, they contribute of their ability to the service of the state and the public, generously and effectively.

PERMANENT IMPROVEMENTS, ADDITION TO EQUIPMENT AND DONATIONS.

Agricultural Experiment Station Building.—The General Assembly of 1907 appropriated \$100,000 for the erection and equipment of a building for the agricultural experiment station. Plans and specifications were prepared by R. P. Daggett & Co., of Indianapolis, providing for a building of two stories above a high basement, to be constructed of brick with trimmings of Bedford stone, with tile roof, and reinforced concrete floor. The dimensions of the building are 200 feet in length, 54 feet in depth, with two wings extending to the rear. There are three working floors containing offices and laboratories for all departments of the experiment station, comprising in all about ninety rooms.

Ground was broken on October 21, 1907, the contract work to be completed by October 1, 1908. When finished this will be one of the largest and best equipped buildings for experiment station work in the country.

Memorial Gymnasium.—This building, intended to be a memorial to those members of the University who lost their lives on October 30, 1903, has at last taken form.

Satisfactory plans having been secured and contracts let, the ground was broken on April 27th with the expectation that the building would be in use during the year 1908-1909. The cost of this building will be upwards of \$80,000, to be defrayed by donations. When complete this building will be a most important addition to the University's resources.

Its dimensions will be 85 by 165 feet, exclusive of the entrance pavilion. The main gymnasium floor will be 80 by 160 feet, without obstacles, the running track being suspended from the roof. The lower floor will contain the swimming pool, 30 by 60 feet in dimensions; shower baths, toilet rooms, locker rooms, team rooms, etc., including all of the features of a modern, first-class college gymnasium.

Addition to Testing Laboratory.—An extension to the laboratory of materials testing, made necessary by the addition of equipment and the large number of students, has been provided in the form of a one-story brick building, 30 by 96 feet, at a cost of \$2,900. It

will contain the equipment for air brake and automobile testing plants.

Funds for Loan Scholarships.—From the proceeds of a dramatic production by the students' organization known as the Harlequin Club, three hundred dollars has been given to be used as loan scholarships, and the class of 1903 has contributed \$200 for a similar purpose. Sums of one hundred dollars may be loaned from these funds to worthy students and when repaid will be again available for loaning.

Gifts.—Many contributions of materials and apparatus have been made to the various departments, some of the more important of which are as follows:

The school of agriculture received about seventy agricultural periodicals supplied by the publishers without charge.

The dairy department has secured instructional samples of products from the Corn Products Refining Company and the Merrill-Soule Company; also a cash contribution of ninety-three dollars from twelve firms interested in dairy supplies to be used for prizes in the educational butter-scoring contests conducted under the auspices of the University.

The animal husbandry department has received as gifts a number of herd and stud books for its library.

The biological department has received the annual installment of books provided from the Keiper Endowment fund; a collection of Selenite crystals, from Bruce Gordon, '08; and thirty-seven museum specimens of native woods from the Burkhalter Lumber Company, of Crawfordsville; physiological and pathological material from Drs. W. F. McBride, W. R. Moffit, and St. Elizabeth's Hospital.

The library has received gifts of 569 volumes and over 2,000 pamphlets; of which a considerable number were from private persons.

The school of mechanical engineering has received valuable contributions of apparatus, as follows: From the Master Car Builders' Association a new air brake testing rack of 100 cars' capacity, to take the place of the former rack of 50 cars' capacity; from the American Locomotive Company, one pair of drivers and axles for the Baldwin compound engine; from the Splittdorf laboratory, New York, one spark coil and one commutator; from the Schutte & Koerting Co., Philadelphia, model of universal injector and working injector; from the American Blower Co., a special Pitot tube:

from Wheeler & Schebler, Indianapolis, a model and working carburetor; from the following companies, carburetors, Byrne-Kingston Co., Kokomo, Ind.; Heitger Carburetor Co., Indianapolis; Buffalo Carburetor Co., Buffalo; the Breeze Carburetor Co., Newark, N. J.

The school of electrical engineering has received from the Kellogg Switchboard and Supply Co., one harmonic convertor; from Thomas Duncan, LaFayette, three watt-hour meters; from G. W. Munro, LaFayette, one watt-meter torque balance; from the Central Electric Supply Co., Chicago, bound catalogues for the use of the senior class; from the Shelby Electric Co., Shelby, Ohio, various types of incandescent lamps.

The civil engineering department has received a car load of cement for use in research, from the U. S. Geological Survey; from the U. S. Cast-Iron Pipe and Foundry Co., Louisville, Ky., three tons of water pipe for use in research; also a collection of blue prints from various railways, and a collection of photographs of graduates of the school, from the alumni.

The department of practical mechanics has received from the Coburn Trolley Track Co., Holyoke, Mass., a section of trolley track and trolley for jib cranes; from the Geometric Chuck Co., Connecticut, one automatic spring die; from the Dental Manufacturing Co., Buffalo, N. Y., one bench gas furnace and blast pipes; and from the Firth Sterling Steel Co., of Chicago, high speed steel for making experimental tools.

Loans.—Various concerns have loaned specimen machines for test or operation in the laboratories, as follows: To the laboratory of agricultural engineering, agricultural machinery and equipment, by G. W. Marshall, LaFayette; E. M. Prince, Bloomington, Ill.; Aspinwall Mfg. Co., Jackson, Mich.; Avery Mfg. Co., Peoria, Ill.; Bateman Mfg. Co., Grenloch, N. J.; David Bradley Mfg. Co., Bradley, Ill.; Hagan Gas Engine and Mfg. Co., Winchester, Ky.; International Harvester Company of America, Chicago; the Ohio Rake Co., Dayton, Ohio; Parlin & Orendorff Co., Canton, Ill.; Racine-Sattley Co., Springfield, Ill.; D. M. Sechler Carriage Co., Moline, Ill.; Victor Mfg. Co., New Carlisle, Ohio. To the dairy department loans of various types of separators from the DeLaval Separator Co.; Sharpless Separator Co.; Vermont Farm Machine Co.; Dairy Cream Separator Co.; D. H. Burrell & Co.; Empire Separator Co.; Reid Separator Co.; Omega Separator Co., and National Separator Co.

To the school of electrical engineering, a single phase A. C. motor from the Century Electrical Co., St. Louis; a polyphase A. C. induction motor, Fairbanks, Morse & Co., Indianapolis; various types of arc lamps from the Westinghouse Electric and Mfg. Co.; two mercury vapor lamps, Arc Theater, LaFayette.

THE EXPERIMENT STATION.

The work of the Agricultural Experiment Station has proceeded along established lines during the year, these consisting in (a) research; (b) publications; (c) demonstrations; (d) agricultural extension. In all of these departments there has been great growth, indicating that the work of the station is being more and more appreciated. This is shown by the increase in the mailing list from 10,000 names in 1904 to 27,000 at the present time; by the increase in correspondence; and by the demands for co-operative experiments which were twice as many as could be granted. This great expansion of the usefulness of the station would have been impossible but for the appropriations made by the legislature in 1905 and by Congress in 1906. Already, even, these appropriations have been quite exhausted in meeting the increased demands for attention from every department. Elsewhere a statement is made of the needs of the station and a complete account of its work will be published in a special report—only an outline is presented here.

The department of agronomy has conducted 770 co-operative experiments in crop production in all parts of the State. It has also carried on systematic investigations in crop rotation, plant breeding, variety tests of grain and forage crops, effects of seed selection on qualities of crops, on vitality of seed corn, and on the relative merits of various systems of cultivation and cultural implements.

The veterinary department has devoted itself to a single line of research upon the nature of hog cholera and possible preventives.

The dairy department has carried on research upon the moisture content of butter; the accuracy of composite and simple samples of cream; the conditions affecting the chemical, physical, and physiological properties of milk; on the basis of a true standard for evaporated milk; on the effect of pasteurization of cream upon the keeping qualities of butter. The department has also provided lectures and demonstrations, and has conducted test and butter scoring contests in the interest of promoting a rational development of dairy husbandry in the state.

The horticultural department has continued its important plant-breeding experiments with tomatoes with gratifying results. It has also studied insect pests and plant diseases with a view to checking

their ravages. Co-operative spraying experiments in the melon-growing districts gave valuable results. Studies were made of orchard conditions with a view to encouraging modern practice in orchard culture; of the production of canning crops; of the onion industry; of the best conditions for forest planting; and of the possibilities of the pecan industry.

The botanical department has continued its researches on the plant rusts with especial attention to the life histories of forms; on grasses; sedges, and cedars. Of particular interest has been the discovery that the forms inhabiting wheat and rye are identical with those found in Europe.

In the chemical laboratory hundreds of analyses of soil and soil products have been made in connection with studies of the effects of various fertilizers.

The State chemist's department has conducted the large work of inspecting the sale of commercial fertilizers and commercial feeding stuffs, which has grown to be an enterprise of great magnitude involving the expert services of many persons, the collection and analysis of hundreds of samples of commercial articles, and, in many cases, the exposure of deceptive or fraudulent practice.

The extension department has been actively engaged in promoting and stimulating the interest of farmers in better methods, and in demonstrating the value of training in their business. The work has consisted in conducting educational trains, organizing district farmers' short courses, arranging educational exhibits at fairs and associations, carrying on experimental work at county farms, organizing corn clubs and excursions to the Station, and in lecturing at associations.

FARMERS' INSTITUTES.

The year reported upon was the first under the new law by which the county institute associations received no support from the State appropriation for meeting the local expenses, the State funds being used for defraying the expense of furnishing speakers. This situation necessitated a greater activity on the part of county chairmen, but the conditions were met with gratifying results in most cases, and as soon as the law is better understood it is believed that its workings will be entirely satisfactory. County aid under the provisions of this law was granted in 41 counties. In all about \$7,000 was raised and expended locally, which in addition to the State appropriation makes approximately \$17,000 devoted to the work during the year.

The institute work surpassed that of any previous year in extent and variety. Every county held at least one institute and in most several were held. In all 321 institutes were conducted, involving 1,112 sessions. The attendance averaged 176 and totalled 50,592.

The quality and character of the work continues to improve and its scope to enlarge. Special sessions for the discussion of particular subjects are now frequently held, such as live stock feeding, dairying, fruit growing, market gardening, soil improvement, etc. There are also in many counties special sessions for girls and boys, for women, and for the discussion of agricultural education and rural school improvement.

In 18 counties 30 educational sessions were held; in most of these the school authorities co-operated and plans for the improvement of rural schools were discussed.

In 20 counties 27 sessions of special interest to boys and girls were held, and young people's contests for the competitive growing and exhibition of crops, and of butter, bread, etc., were held in 37 counties.

This brief outline of the activities of this branch of the University serves only to indicate its importance as a factor in disseminating information and stimulating a broader and sounder life in the rural community through the relations of business, the school, and the home. The work is remarkably effective considering the small sums expended, and it is gratifying to know that the Farmers' Institutes of Indiana rank among the best in the country.

THE NEEDS OF THE UNIVERSITY.

It is the duty of those responsible for the welfare of the University to report upon its needs.

That the institution has needs which are real and pressing is in itself evidence of growth and vitality. Purdue University is a rapidly growing enterprise, because it offers to students and to the industries of the State practical teaching and practical aid which they seek in large numbers. In accordance with the principles on which Purdue is founded, its officers and faculty are bound to conduct the University on these lines. Their appeal is for sufficient resources to enable them to meet the natural demands of students and of the people of the State.

Each annual report of the University sets forth all of its conditions and needs. During the past six years we have repeatedly called attention to the crowded conditions in certain engineering departments, and to the effect which these must have upon the quality of instruction. We have regarded the need of buildings for this purpose as the most urgent one in the University, and because it has not been met, we are embarrassed to an extent which is no longer tolerable. But two alternatives are open to us, if we are to maintain proper standards of instruction, viz, to reduce the number of students, or to increase the facilities for teaching them. The former course is not to be considered save as a matter of last necessity.

It is inconceivable in this day of progress and of educational growth that an institution which by its devotion to right ideals; by the sacrifices of its faculty, and by its service to the State has won a high standing in the educational and business world, should suffer curtailment or deprivation because of lack of reasonable support at the hands of the State.

The present needs of Purdue University may be presented under four heads:

1. Larger funds to defray the cost of instruction.
2. Provisions for building and equipment to care for the students now enrolled in the departments of engineering.
3. Provision for building and equipment for the present needs and proper development of the School of Agriculture.

4. Provisions for the increasing demands upon the Experiment Station.

These are discussed in order, as follows:

1. *Increased Income.*—The corps of instruction now numbers 147. The scale of salaries paid is lower than that of any other institution of like rank and scope in the country. The increased cost of living is a positive embarrassment to those who depend on these low salaries for support. It is especially difficult to secure competent professors in the technical branches because of the great demand for such and the uniformly large salaries paid elsewhere. Only loyalty and love for their work keep numbers of our professors in the ranks; nevertheless we are losing desirable men who have better opportunities at other institutions. This is not to the credit of the State and is to the very great misfortune of the University. We should be able to employ more instructors for the work and pay better salaries. This can only be done on the basis of a larger income.

2. The three engineering schools enroll in round numbers 1,400 students. In this respect they are second in the United States. In their courses of study all of these students are required to take instruction in shop work, drawing and engineering laboratory practice. About one-half of the total number are engaged in these branches at any given time. The rooms and equipment available were designed more than ten years ago at a time when the students using them numbered about one-fourth as many as at present. Meantime no appreciable enlargement of these facilities has occurred. It needs no further explanation to show that instruction in these fundamental subjects, to say nothing of the health, safety and convenience of students and instructors, has suffered greatly.

In some departments students can not be received for lack of room. Others must work at unseasonable hours or be content with less than the required amount of time assigned. Successive classes follow each other all day in such manner that the instructor is left no time for preparation or repair of equipment. The conditions are such as not only make it impossible to do the work as it should be done, but they are discouraging to the interest of both students and instructors.

The remedy is to be had in the construction of simple buildings of inexpensive character for the shops, drawing rooms, and laboratories, and in the provision of equipment, additional to that now on hand, sufficient to accommodate the present number of students in these courses. The quarters now occupied by these departments

could then, at small cost, be fitted up for recitation rooms for these same departments, of which there is great dearth.

The cost of these buildings and the necessary equipment has been carefully estimated as follows:

1. For buildings for shops, drawing rooms and laboratories\$210,000
2. For moving, installing and additions to present shop and laboratory equipment..... 125,000
3. For refitting and furnishing present buildings for class rooms 10,000

The plan as above outlined is not extravagant; it is the most economical that can be devised. If the aggregate sum involved seems large it must be remembered that it is in connection with a large enterprise—the training of 1,400 young men. It is also a fact that in any other engineering school of similar rank to Purdue the provisions made, in floor space and money, are distinctly larger than would be the case at Purdue if all the above program were carried out.

3. *The School of Agriculture.*—This department of the University is growing more rapidly than any other. For the current year student attendance has increased over 40 per cent., and its future growth will undoubtedly exceed in rate and extent any that has ever occurred at the University.

Moreover the course of study is undergoing evolution and development.

This school needs, therefore, first, means to amplify the course of study in accordance with modern standards and, second, to prepare for a larger number of students in the near future. The more urgent and immediate of these needs has reference to providing better equipment and facilities for certain lines of instruction now inadequately supplied, as follows:

(a) In animal husbandry: Instruction in this branch is in great demand and the present facilities do not meet the requirements either as regards space or equipment. For instruction in stock judging there is available only a small pavilion in connection with the dairy barn. It is too small to receive the classes in this work. In 1904, to replace the college barn destroyed by lightning, a dairy barn was erected at a cost of about \$10,000. The plan contemplated a structure of which the dairy barn was to be one wing and a beef-cattle barn the other. This plan has not been completed and at the present time the institution has no suitable, much

less a modern or model, beef-cattle barn. This has now become a pressing need of the department. There is no building for the clinical examination of domestic animals, an important part of the work in animal husbandry. The provisions for the care of the horses is unfit and unsatisfactory. There should also be additions to the herd of live stock in order to make it suitable as the basis for instruction in this subject.

(b) Instruction is given in farm engineering, including the construction of roads and drains, and the planning of buildings; the operation and care of farm machinery, etc. This is a subject of rapidly growing importance in agricultural education. The work has been begun and considerable equipment, either loaned or donated. Instruction is given in a small frame building which is unsuitable even as a temporary make-shift. A suitable building should be provided for this work.

(c) The department of horticulture has no greenhouse for use in its instruction; a lack which is wholly inconsistent with the importance of this work.

For the most part the buildings needed will be of inexpensive character, but they should be substantial and ample as befits a public institution. The estimated costs are as follows:

(a) Animal Husbandry—

Stock judging building.....	\$30,000
Building for clinics.....	10,000
Beef-cattle barn	15,000
Horse barn	15,000
Live stock	5,000

(b) Farm Engineering building..... 20,000

(c) Greenhouse for Horticulture Department..... 5,000

4. *The Experiment Station.*—This department of the University, it should be understood, is quite distinct from the departments of instruction. Money appropriated to the Experiment Station can not be expended for the instruction of students and, vice versa, funds provided for the maintenance of teaching can not be applied to the station.

The work of this department has developed with extraordinary rapidity since 1905, when the first appropriation was made for it by the State. Its efforts to study problems of farming and to improve farm practice bring it into close touch with the farmers of the State who, in appreciation of its service, make constantly larger demands. These demands it is now impossible to meet without ad-

ditional funds. The present State appropriation is divided, under the terms of the act, between the lines of crop and soil improvement, animal husbandry and dairying. The sums apportioned to these divisions no longer suffice to meet the actual requests from farmers for attention, and it will be necessary to refuse these requests unless these sums are increased.

For the important division of horticulture, no provision at all is made, and the horticultural interests are urging their claims with an insistence which can not be denied. Provision for this work, equal to that for the other divisions, should by all means be made.

The matter of bringing the work of the Station home to the farmers is of importance, not so much on account of the benefit to individuals as because, in this way, general agricultural practice is improved to the advantage of the whole industry. The efforts of the Station to accomplish this through the medium of special trains, corn schools, lectures, demonstrations, and exhibits have borne fruit to a remarkable degree. To those familiar with the work and its results there could be no doubt of its importance or of the wisdom of providing for its maintenance under the designation of "Agricultural Extension."

There is also a demand from representatives of the poultry industry that some attention be given to its problems and difficulties, which the extent and importance of the business would seem to warrant.

Careful estimates of sums which would be adequate to meet these various demands and needs yield the following items:

1. For experiments and demonstrations in horticulture\$10,000
2. For additional means for investigations in crops and soils 10,000
3. For agricultural extension..... 10,000
4. For enlarging the experiments in animal husbandry 5,000
5. For dairying 5,000
6. For establishing experiments in poultry raising.. 10,000

The work already being done by the Station is contributing directly to the wealth of the State in the increased production and value of agricultural property and products. Its extension by means of the appropriations above indicated would be a profitable investment and even then would be far below the support given to such work in our neighboring states.

The matters above set forth are those which are urgent as regards the schools of instruction and of equal importance so far as the Experiment Station is concerned, but they by no means complete the list of needs of the institution. The following items, while not directly affecting the work of teachers and classes, do nevertheless have a deterrent effect upon the progress and development of the institution as a whole, and may not be omitted in a complete report of the institution's condition at this time. In the near future these needs will require positive attention.

(a) The library is growing rapidly in extent and value. Its use by the students and instructors is an essential part of their work. It is now housed in one of the University buildings used for a great variety of other things; not fire-proof or even reasonably safe against fire; the books are distributed on three floors, where they are not readily accessible and it is not possible for them to receive proper care; the rooms are small and imperfectly lighted and ventilated. The conditions are entirely unsuitable and unworthy of the institution and some plan should be made in the near future for the proper housing of this important department of the University.

(b) Under the law by which the University receives an annual appropriation for the federal government, instruction in military science is required. The U. S. War Department furnishes valuable equipment and the services of a regular army officer for the purpose, free of cost to the University. The cadet corps numbers over 800. For its use as an armory there is available an old frame building, 50 by 100 feet, which is entirely inadequate for the purpose. The inspecting officers from the War Department criticise these conditions severely, and with justice. Not only does the importance of this work warrant first-class facilities, but the good faith of the State with the federal government should provide a suitable building as an armory without delay.

(c) A building for the practical work of instruction in dairy and creamery methods, and laboratory practice in handling milk and milk products is greatly needed in the dairy department.

The needs of the University as above set forth are actual and not fancied. They have reference to caring for the large enrollment of students and the large sphere of usefulness of the Experiment Station. The institution has commended itself to the people of the State. It deserves generous support. Unless this can be obtained in reasonable degree its usefulness and standing must inevitably suffer.

TREASURER'S REPORT.

As Treasurer of the Board of Trustees of Purdue University, I hereby submit my report of moneys received during the year ending June 30, 1908:

1. Regular income from maintenance of departments of instruction—

(a) Federal appropriation (Morrill Fund) ..	\$30,000 00
(b) State Educational tax (General Fund) ..	161,535 39
(c) Interest on endowment fund	17,000 00
(d) From miscellaneous sources	74,982 35
Total	\$283,517 74
2. Income for the maintenance of the Agricultural Experiment Station—

Federal appropriations—	
(a) Hatch Fund	\$15,000 00
(b) Adams Fund	9,000 00
State appropriation for year ending September	
30, 1908	25,000 00
Miscellaneous receipts	55,900 91
Total	\$104,900 91
3. Appropriation for Farmers' Institutes for year ending September 30, 1908 \$10,000 00
4. Specific appropriations for buildings—

(a) Balance of appropriation for Chemical building....	\$1,376 23
(b) Appropriation for Experiment Station building....	\$100,000 00

JAMES M. FOWLER,
*Treasurer of Board of Trustees of
 Purdue University.*

REPORT OF THE SECRETARY OF THE BOARD OF TRUSTEES.

As Secretary of the Board of Trustees of Purdue University, I hereby certify to the correctness of the following statements of receipts and disbursements, viz.:

1. For maintenance of the Departments of Instruction.
2. For maintenance of the Agricultural Experiment Station.
3. For maintenance of Farmers' Institutes.
4. Special appropriations for the Erection of Buildings.

All for the year ending June 30, 1908, except as specifically indicated for certain State appropriations which are for the year ending September 30, 1908.

EDWARD A. ELLSWORTH,
*Secretary of the Board of Trustees
of Purdue University.*

1. FUNDS FOR THE MAINTENANCE OF THE DEPARTMENTS OF INSTRUCTION.

A. GENERAL FUND.

Dr.

Received of the State as per report of Treasurer.....\$161,535 39

REPORT

OF THE

Indiana State Normal School

FOR THE

FISCAL YEARS ENDING SEPTEMBER 30, 1907
AND SEPTEMBER 30, 1908

To the General Assembly

INDIANAPOLIS:

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING.
1908.

THE STATE OF INDIANA.

EXECUTIVE DEPARTMENT.

November 25, 1908.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,

INDIANAPOLIS, December 19, 1908.

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct, except that \$12,941.25 was drawn of State September 30, 1908, and that item seems to be entered on institution's books October 1, 1908.

J. C. BILLMEIMER,

Auditor of State.

December 19, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,

Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 19, 1908.

FRED A. SIMS,

Secretary of State.

Received the within report and delivered to the printer December 19, 1908.

HARRY SLOUGH,

Clerk Printing Bureau.

OFFICERS.

BOARD OF TRUSTEES.

WILLIAM H. ARMSTRONG.....	Indianapolis, Indiana
JAMES H. TOMLIN.....	Shelbyville, Indiana
FASSETT A. COTTON.....	Indianapolis, Indiana
JOSHUA JUMP.....	Terre Haute, Indiana
BENJAMIN F. LOUTHAIN.....	Logansport, Indiana

OFFICERS OF THE BOARD.

WILLIAM H. ARMSTRONG, President.....	Indianapolis, Indiana
JOSHUA JUMP, Secretary.....	Terre Haute, Indiana
WILLIAM R. McKEEN, Treasurer.....	Terre Haute, Indiana

Report of the President of the Board of Trustees.

To the Governor of Indiana:

Section 13 of the Act of 1865, creating the Indiana State Normal School, makes it the duty of the Board of Trustees to submit at the end of each biennial period a report to the General Assembly, setting forth the financial and scholastic condition of the school; also making such suggestions as in the judgment of the board will tend to the improvement and advancement of the institution.

In obedience to this provision of the statute, I have the honor to submit the report of the financial transactions of the institution and of its scholastic condition and work for the two years ending September 30, 1908. This statement is also accompanied by such recommendations as, in the opinion of the Board of Trustees, the interests of the institution require to be made.

The report of the President of the Faculty sets forth briefly, but in comprehensive form, the scholastic work and present condition of the school, and the reports of the secretary and treasurer show the financial transactions of the institution for each of the two years ending respectively September 30, 1907, and September 30, 1908.

It will be seen that the institution has had a period of unexampled prosperity. During the year ending September 30, 1907, 2,309 Normal School students attended the institution. In addition, there were 213 pupils in the training school, making a total attendance for the year of 2,522. In the year ending September 30, 1908, the total attendance of different students in the Normal School proper was 3,049, in the training school 243, making a grand total of 3,292. The second year, therefore, shows a growth over the first year of 770 different students, all but 29 of these being Normal School students preparing to be teachers in the public schools. It is to be remembered that, under the statute, the Normal School can admit no females under sixteen years of age and no males under eighteen. Further, all applicants for admission must declare in writing their intention to prepare to be teachers for teaching in the public schools of Indiana. This provision

of the law is strictly enforced. No person is admitted to the Normal School who does not state in writing that he enters in good faith to prepare for teaching in the public schools of Indiana. Further, the courses of study and the work from beginning to end all have public school teaching in view. Education for its own sake and with general culture ends in view is not the work of the Normal School. It is a special professional or technical institution in every way—as much so as a law school, a medical school, or a technical school of any kind. These facts necessarily restrict the attendance to one class of students only.

By reference to the statistical table given elsewhere in this report, it will be seen that throughout the history of the school the attendance during the fall and winter terms is very much smaller than at other times in the year. For instance, in the last year covered by this biennial report the attendance during the fall term was 495, in the winter term 547, in the spring term 1,851, and in the summer term 1,347. This, however, gives the large term average of 1,059 different students. The explanation of this disparity in attendance during the various terms of the year is the fact that the school is a teachers' school, and that during the fall and winter terms teachers are teaching in the schools of the State. A great majority of schools close about the end of March, and this fact enables great numbers of public school teachers to come to the Normal School for the spring and summer terms.

Special attention is called to the great work that is being done in the summer term. Fourteen years ago the summer term was started as a private enterprise by two or three members of the faculty, a small tuition being charged. At the end of the second year it was evident that the summer school was meeting a great need and it was decided to conduct it thereafter as an integral part of the school year, the regular faculty doing the work. This term has grown very rapidly in attendance, there being no fewer than 1,347 different students in attendance in the summer term of 1908.

The demands upon the institution are increasing from year to year. Recent legislation has made the high schools an integral part of the public school system of the State. As shown by the report of the President of the Faculty, there are one thousand or more schools in the State doing more or less high school work, and the demand upon the Normal School to supply competent, trained teachers for the high schools has been increasing from year to year.

To meet this demand the school two years ago organized a College Course for teachers. The object of this course is to prepare

men and women for thorough, scientific work in the higher grades of the public schools. The institution has also added to its training school a full four years' high school department, for the purpose of furnishing facilities for observation and practice in high school work by those who are preparing to be teachers in these schools. Probably no other Normal School in the United States is maintaining so extensive and efficient a system of training as is this Normal School. Our training school consists of a rural school, the eight grades below the high school, and a high school doing four years of standard high school work. To maintain this system of training schools entails a heavy expense, but, in the opinion of the board, it is essential to the work of the Normal School. Without this the work of the institution would be of a theoretical character, lacking the only test of efficiency—actual practice and skill in doing the work that is to be done when the student leaves the school.

The library has come to be one of the most important features of the school. When the fire occurred in 1888 it left the institution without an armload of books. Everything was destroyed. Since that time about 50,000 volumes have been accumulated, valued at something like \$75,000. These books have been bought by a fund known as the Library Fund. During the past twenty years each student has paid in a library fee of \$2.00 per term, and this has produced in the neighborhood of \$75,000, all of which has been expended for books. The last General Assembly appropriated \$99,970 for the construction of a new fireproof library building for the proper care and use of these books. Plans and drawings were prepared and a contract has been let for the erection of the building. It is now well on the way, and we think will be completed ready for use by the close of the current school year. The building will be a strictly fireproof library building, with every modern convenience for library work. It is architecturally very beautiful, and when completed will be one of the very best library buildings in the State. It will add very greatly to the efficiency of the school's work.

By reference to the report of the President of the Faculty, it will be seen that, owing to the rapid growth of the school and the extension of its work, it will be impossible to carry this on on the present high plane without a substantial increase of revenue to the institution. Our faculty are paid moderate salaries, and the teaching force in many of the departments is insufficient in number. We earnestly recommend that the tax levy for the support of the State Normal School be increased in the amount of

thirty-three and one-third per cent., to the end that the school may maintain its high standard of work and meet the increasing needs of the thousands of public school teachers that are from year to year receiving its instruction.

A few years ago a department of Manual Training was established, and limited quarters were assigned this department for its work. This department has entirely outgrown its present quarters and facilities for work. The new school law requires that teachers shall be trained in this subject, and it is impossible for the Normal School to do this work without enlarged facilities.

Also, the various departments of natural science, with their lecture rooms, class rooms, laboratories, etc., are unable to do the high-grade work which the state's institution for the training of teachers should have. Several of these departments are in the basement, with insufficient light, small rooms and inadequate laboratory equipment. As the President points out, our laboratories are not up to the standard of modern, well-equipped laboratories for science work. Many teachers have been refused admission to these science classes because of the insufficient teaching force and the inadequate laboratory equipment. The Board of Trustees, therefore, respectfully requests that the next General Assembly shall make an appropriation to the Normal School of \$150,000 for the purchase of a site for, and the erection thereon of, a suitable building for its work in manual training and in the various branches of natural science. A sketch of what it is proposed to construct, with an estimate of the cost of the various classes of material and labor required, will be submitted to the Legislative Committee, and, later, to the General Assembly.

Trusting that these requests will receive the favorable consideration of the committee and of the General Assembly, and assuring you of our desire to maintain the institution under our charge upon the highest possible plane, and as economically as this can be done, this report is respectfully submitted.

WM. H. ARMSTRONG,
President Board of Trustees.

Report of the President of the Faculty.

Hon. William H. Armstrong, President Board of Trustees:

I present herewith a brief report of the scholastic condition of the institution for the biennial period ending September 30, 1908:

The regular faculty consists of the President, the Vice-president, twenty other heads of departments, twelve assistant professors, a Dean of Women, eight training school teachers, three assistant librarians and four laboratory assistants—fifty in all. In addition, it has been found necessary to employ from twelve to fifteen temporary teachers during the spring term, when the attendance is much larger than at other times in the year. The rural schools close their work at about the time of the opening of the spring term, and great numbers of teachers enter the Normal School at this time for one or more terms' work. In the spring of 1908 no fewer than 1,851 students were in actual attendance. To provide suitable instruction for this large body of students it was necessary to employ fifteen teachers in addition to the regular members of the faculty. It would be much more satisfactory if these spring students, who are themselves nearly all teachers of experience, could be taught by permanent members of the faculty, but as the attendance at other times would hardly warrant so large a teaching force, the plan pursued seems the only practicable one to follow. Many graduates of the school and other teachers of good education and extended experience close their schools at this time, and thus far it has been found practicable to arrange with a sufficient number of these to carry the extra spring classes. This meets fairly well the needs of the men and women who enter the school at this time.

ATTENDANCE.

The two years covered by this report have been the most prosperous in the history of the institution. In the year ending September 30, 1907, 2,309 different students were enrolled in the Normal School courses proper. In the various grades of the training school, which is maintained entirely by the State, there were 213 pupils. The total attendance of different students was 2,522. In the year ending September 30, 1908, there were 3,049 different stu-

dents in the Normal School courses. In the various grades of the training school 243 were enrolled. The total enrollment, therefore, of different students for the second year of the biennial period was 3,292. The actual increase in attendance in the Normal School proper during the second year of the period over the first was 740 different students. In the training school the increase was 29, making a total increase of 769.

HIGH SCHOOL DEPARTMENT OF TRAINING SCHOOL.

The statute of 1865, under which the State Normal School was organized, defined the purpose of the institution to be "the training of teachers for teaching in the public schools of Indiana." At this time the term "public schools" included the graded schools and the rural schools. There were very few high schools in the State. Probably not ten schools in Indiana maintained full high school courses. The work of the State Normal School, therefore, during the first years of its history, was confined almost exclusively to the preparation of teachers for the rural schools and the graded schools of towns and cities. During the past decade the high schools have increased very rapidly in number and have greatly extended their courses of study. At present there are nearly three hundred commissioned high schools in Indiana, and probably twice this number of high schools maintaining courses from two to three years in length. It would be safe to say that there are more than one thousand schools in Indiana today doing more or less high school work.

Recent legislation has declared the high schools to be an integral part of the public school system of the State. Clearly, it became the duty of the State Normal School to train teachers for teaching in the high schools as well as for the graded and the rural schools. To accomplish this object the school has made two important changes.

In the first place, it has added a course of instruction known as the College Course for the specific training of teachers for the high schools. The course maintains college standards in every way. The same entrance conditions, the same quality of work, and the same conditions for graduation obtain. It is, however, a strictly professional or pedagogical course for teachers. All the work in all the subjects is done from the teacher's point of view, and about one-fourth of the work required for graduation is of a purely pedagogical character, consisting of the higher aspects of educational

psychology, history of education, philosophy of education, practice in the high school department of the training school, etc. Already a much larger number of students than expected have entered upon this course and it promises to be one of the most valuable additions to the school made in recent years.

In the second place, the school has added to its training department a full four years' high school course. This department of the training school is maintained for the purposes of observation and practice on the part of those teachers taking the College Course and preparing to be teachers in the high schools of the State. This, also, is an addition of the greatest importance to the school. It affords the opportunity for the students to observe and to do practice teaching in the very subjects which they will be required to teach when they leave the school and enter the high schools as teachers. It gives, also, the opportunity to study and observe the work done with high school pupils in all grades of advancement. These important changes have met the warmest approval of the educational people of the State.

In former years the training school was maintained jointly by the city and the State. This arrangement was quite satisfactory during the early years of the school and until recent years, when the attendance has become so large. Two years ago, by mutual consent, the agreement that had existed between the city and the State for many years was dissolved, and the State now maintains in every way all grades and departments of the training school. This has proved very much more satisfactory than the former arrangement. The training school is now a state school, and it is open to the children of every part of the State upon the same terms.

THE SUMMER SCHOOL.

The summer term has come to be one of the most important terms of the year. Fourteen years ago a six weeks' summer school was conducted as a private enterprise by a number of members of the faculty. To meet the expenses a small tuition was charged. The first year 111 students were enrolled. During the two summers following the school was conducted on the same plan, the number increasing to 306. It became evident that there was a strong demand for a regular summer term as a part of the school year. It was decided to establish this under the direction and control of the Board of Trustees, and to employ at their regular salaries such members of the faculty as might be necessary to conduct the work.

The school has grown very rapidly, and is now, next to the spring term, the largest term of the year. In the summer term of 1908 there were 1,347 students in attendance. The summer school gives an opportunity to those teachers who are in the schoolroom throughout the entire school year to attend when they are not teaching. The enrollment is made up, therefore, very largely of teachers of mature years and extended experience. They are high school principals and teachers, superintendents of city and town schools, grade teachers and others who could not attend at other times in the year. The summer term, therefore, has rendered a great service to the public schools of the State.

THE LIBRARY.

Twenty years ago the library of the State Normal School was destroyed by fire. Not an armload of books was left. When, a year later, the school was enabled to move into a new building, it set about creating a new library. A library fee of two dollars per term has been collected from every student from that time until this. This yields between \$5,000 and \$6,000 per year, and the money is devoted exclusively to library purposes. In this way the school has built up a library of nearly 50,000 well-selected volumes of permanent value and of the greatest value to the school in doing its work. The library outgrew its quarters several years ago. The last General Assembly appropriated \$99,970 for the erection of a new fireproof library building. Plans were drawn, bids were received and contracts have been awarded for the construction of this building. It is now well on the way. It is a strictly fireproof building, of beautiful architectural design and planned to meet in every way the growing needs of the library. It is expected that this building will be completed and be ready for occupancy about June 30, 1909.

STATISTICS.

The following table exhibits the number of Normal School students proper enrolled during each term since the organization of the school, the average term enrollment for each year, and the whole number of different students for each year. It also shows the number of pupils in the Normal Training Schools for each year of the biennial report. As explained elsewhere, the Training Schools were supported jointly by the city and State until the opening of the school year in September, 1907:

YEAR ENDING.	ENROLLMENT.				Average Term Enroll- ment.	Whole Number of Differ- ent Stu- dents for the Year.	Normal Training School.	Total Number of Differ- ent Stu- dents.
	Winter Term.	Spring Term.	Summer Term	Fall Term.

September 30, 1908.....	547	1,851	1,347	495	1,059	3,049	243	3,291

Since the organization of the school in 1870 students have registered from the various counties of the State as follows:

Adams 64, Allen 137, Bartholomew 299, Benton 202, Blackford 80, Boone 420, Brown 96, Carroll 610, Cass 319, Clark 314, Clay 959, Clinton 356, Crawford 74, Daviess 508, Dearborn 227, Decatur 235, Dekalb 73, Delaware 193, Dubois 190, Elkhart 186, Fayette 135, Floyd 157, Fountain 403, Franklin 448, Fulton 187, Gibson 281, Grant 267, Greene 520, Hamilton 189, Hancock 311, Harrison 131, Hendricks 691, Henry 427, Howard 509, Huntington 480, Jackson 271, Jasper 186, Jay 128, Jefferson 196, Jennings 193, Johnson 230, Knox 741, Kosciusko 211, Lagrange 200, Lake 80, Laporte 84, Lawrence 391, Madison 645, Marion 630, Marshall 126, Martin 172, Miami 220, Monroe 123, Montgomery 553, Morgan 645, Newton 205, Noble 121, Ohio 33, Orange 266, Owen 692, Parke 833, Perry 116, Pike 132, Porter 15, Posey 377, Pulaski 142, Putnam 545, Randolph 294, Ripley 298, Rush 229, Scott 108, Shelby

275, Spencer 251, Starke 69, Steuben 46, St. Joseph 146, Sullivan 825, Switzerland 147, Tippecanoe 348, Tipton 143, Union 64, Vanderburgh 168, Vermillion 495, Vigo 5,200, Wabash 599, Warren 231, Warrick 297, Washington 444, Wayne 467, Wells 216, White 306, Whitley 120.

WHENCE THEY COME.

During the past two years each of the ninety-two counties of the State has had representatives in the school as follows:

Adams 8, Allen 21, Bartholomew 58, Benton 15, Blackford 7, Boone 34, Brown 17, Carroll 30, Cass 45, Clark 40, Clay 155, Clinton 23, Crawford 20, Daviess 71, Dearborn 32, Decatur 32, Dekalb 11, Delaware 29, Dubois 43, Elkhart 20, Fayette 11, Floyd 25, Fountain 37, Franklin 34, Fulton 18, Gibson 40, Grant 19, Greene 101, Hamilton 33, Hancock 24, Harrison 33, Hendricks 49, Henry 38, Howard 28, Huntington 52, Jackson 36, Jasper 37, Jay 18, Jefferson 23, Jennings 38, Johnson 24, Knox 129, Kosciusko 13, Lagrange 14, Lake 27, Laporte 16, Lawrence 72, Madison 74, Marion 67, Marshall 23, Martin 33, Miami 15, Monroe 20, Montgomery 38, Morgan 58, Newton 25, Noble 25, Ohio 9, Orange 36, Owen 80, Parke 50, Perry 33, Pike 30, Porter 3, Posey 72, Pulaski 18, Putnam 36, Randolph 42, Ripley 38, Rush 43, Scott 5, Shelby 41, Spencer 25, Starke 19, Steuben 11, St. Joseph 13, Sullivan 112, Switzerland 8, Tippecanoe 34, Tipton 15, Union 9, Vanderburgh 30, Vermillion 93, Vigo 517, Wabash 27, Warren 7, Warrick 50, Washington 66, Wayne 27, Wells 21, White 41, Whitley 28.

COURSES OF STUDY.

The last General Assembly enacted a law which divides all common school teachers of the State into three classes known as "Class A," "Class B," and "Class C."

To meet the needs of all these classes of teachers and students, the State Normal School has organized the following courses:

COURSE FOR TEACHERS OF "CLASS A."

(Twelve Weeks.)

Educational Psychology, with special reference to the needs of teachers of graded and district schools.

Observation and Study in Training Schools, both graded and country.
Methods of Instruction, adapted to graded and district schools.

One term's work in any of the common branches or other subjects offered in the course for teachers of "Class C."

Vocal Music, Penmanship, Drawing or Manual Training.

This course is organized especially for graduates of commissioned or certified non-commissioned high schools who have not taught and who are by law, after August 1, 1908, required to have at least "twelve weeks' work in the school maintaining a professional course for the training of teachers" before teaching. Credits made may be applied on any of the courses embracing the subjects pursued in this course.

COURSE FOR TEACHERS OF "CLASS B."

(Twenty-four Weeks.)

Educational Psychology, with special reference to the needs of teachers of graded and district schools.....twenty-four weeks

Observation and Study in Training Schools, both graded and country.
.....twelve weeks

Methods of Instruction, adapted to graded and district schools.....
.....twelve weeks

History of Education or School Organization and Administration....
.....twelve weeks

Two terms' work in any one or more of the common branches or other subject or subjects offered in the course for teachers of "Class C."

Vocal Music, Penmanship, Manual Training or Drawing.....twelve weeks

This course is organized especially for graduates of commissioned or certified non-commissioned high schools who have had

at least one year's experience as teachers, and who are by law, after August 1, 1908, required to have "at least twenty-four weeks' work in a school maintaining a professional course for the training of teachers." Credits made may be applied on any of the courses embracing the subjects pursued in this course.

COURSE FOR TEACHERS OF "CLASS C."

(Three Years.)

REQUIRED SUBJECTS.

Arithmetic	twenty-four weeks
Language, Grammar and Composition.....	twenty-four weeks
History and Civil Government.....	twenty-four weeks
Physiology and Hygiene.....	twelve weeks
Oral Reading and Literature.....	twenty-four weeks
Geography	twenty-four weeks
Penmanship	twelve weeks
Educational Psychology, with special reference to grade work	thirty-six weeks
Principles and Methods of Teaching.....	twenty-four weeks
Observation and practice in Training Schools.....	twenty-four weeks
School Organization and Administration.....	twelve weeks
History of Education	twelve weeks
Manual Training or School Economics, adapted to all grades	twelve weeks
Vocal Music	twelve weeks
Drawing	twelve weeks
Nature Study	twelve weeks
Physical Culture	twenty-four weeks

ELECTIVE SUBJECTS.

Latin	three years
German	three years
Algebra	one year
Geometry	one year
Trigonometry and Analytical Geometry.....	one year
Physics	two years
Chemistry	two years
Botany	two years
Zoölogy	two years
English and American Literature	two years
History	two years

This course is organized for graduates of commissioned or certified non-commissioned high schools and others of equivalent scholarship. A "credit" consists of twelve weeks' successful work in any subject. Thirty-eight credits are necessary for graduation.

Four heavy subjects carried regularly with daily recitations of fifty minutes each, five days per week, is the maximum work for students of average ability and attainments. Only students of exceptional maturity and strength will be permitted to attempt more. Vocal Music, Penmanship or Physical Culture may be taken in addition to the regular number named.

COURSE FOR TEACHERS OF DISTRICT AND TOWN SCHOOLS.

(Two Years.)

Language, Grammar and Composition.....	twenty-four weeks
Arithmetic	twenty-four weeks
Oral Reading and Literature.....	twenty-four weeks
Geography	twenty-four weeks
History and Civil Government.....	twenty-four weeks
Physiology and Hygiene	twelve weeks
Vocal Music	twelve weeks
Drawing	twelve weeks
Principles and Methods of Teaching.....	twenty four weeks
Educational Psychology, with special reference to grade work.....
.....	twenty-four weeks
Observation and Practice in Training Schools, graded and country..
.....	twenty-four weeks
Manual Training or School Economics adapted to all grades..	twelve weeks
Physical Culture.....	two hours per week—twenty-four weeks
History of Education.....	twelve weeks
Penmanship	twelve weeks
Elective (from other courses).....	twenty-four weeks

This course is open only to graduates of commissioned high schools and others of equivalent scholarship.

COURSES FOR NON-GRADUATES OF HIGH SCHOOLS.

Algebra	forty-eight weeks
Commercial Arithmetic	twelve weeks
Plane and Solid Geometry	thirty-six weeks
Composition and Rhetoric.....	thirty-six weeks
English Literature	thirty-six weeks
American Literature	thirty-six weeks
Latin or German.....	one hundred and forty-four weeks (four years)
Ancient History	twenty-four weeks
Medieval and Modern History.....	twenty-four weeks
Botany or Zoölogy	thirty-six weeks
Physics or Chemistry	thirty-six weeks
Physical Geography	twenty-four weeks
Vocal Music	twelve weeks
Drawing	twelve weeks

COLLEGE COURSE.

In order to meet the increasing demand of school boards and school superintendents for teachers holding college diplomas, and to give an opportunity for teachers in the grades, or other persons, to prepare themselves for teaching in the high schools, the authorities of the State Normal School have established a four-year College Course. Such a course is also made necessary by the action of the General Assembly in its last session. By it the high schools of the State were made an integral part of the common school system. Thus, the maintenance of a college course, designed especially to prepare teachers for the high school, is clearly made a part of the work of the State Normal School.

While the course is arranged especially to prepare teachers for the high school, any one expecting to do educational work in any field should find in it opportunities for acquiring a broader culture and better professional attainments.

Graduates of the commissioned high schools of the State and graduates of normal schools of recognized standing will find that this course is especially adapted to their conditions and needs.

GRADUATION—REQUIRED WORK.

To graduate from the College Course, a student must have not less than thirty-six credits in college work, in addition to the entrance requirements. Of these thirty-six credits, twenty-three are required of all students, as follows:

Professional	9
Mathematics	2
Science	3
Latin or German.....	5
English Literature and Composition.....	2
European or American History.....	2

ELECTIVE WORK.

All the remaining work necessary for graduation may be selected from any of the departments which offer work of college grade. In choosing these elective subjects the student should consult the head of the department in which he is doing his major work.

The regular amount of work expected of each student is three full courses a term, or the equivalent in hours. Exceptions to this rule will be granted only on presentation of good reasons by the Committee on the College Course.

STUDENTS WISHING TO TEACH BEFORE GRADUATION.

Students in the College Course may, at any time, take the professional work required for teachers of "Class A" or "Class B," and when this has been done, together with the elective academic work specified for each of these classes, they may qualify to teach by merely obtaining the necessary license. The professional work thus done will count toward graduation the same as other professional work. The academic work done in connection with it will be counted on the course, like other academic work, provided it is of college grade.

The following courses are offered:

Composition and Rhetoric.....	eight courses
European History	seven courses
Economics	two courses
American History	six courses
Drawing	four courses
Manual Training	three courses
Mathematics	nine courses
Physiology	three courses
History of Education	nine courses
English and American Literature.....	nine courses
Psychology	seven courses
Philosophy	seven courses
Physics	six courses
Chemistry	six courses
Latin	twelve courses
German	twelve courses
Botany	six courses
Zoölogy	six courses
Geography and Geology	nine courses
Library Science	three courses
Reading and Public Speaking	six courses
Methods, Observation and Practice.....	four courses

The term "course" denotes twelve weeks' work in a subject. For a detailed statement regarding courses offered during the year 1908-09 see the statements of the various departments.

COURSE FOR COLLEGE GRADUATES AND HOLDERS OF THE LIFE LICENSE.

(One-year, thirty-six weeks.)

For this class of students courses are offered as follows:

Educational Psychology	thirty-six weeks
Methods of Instruction	twenty-four weeks
Observation and Practice in Training Schools.....	twenty-four weeks
History of Education.....	twelve weeks

School Organization and Administration.....	twelve weeks
School System and Laws of Indiana.....	twelve weeks
Experimental Psychology	thirty-six weeks
Philosophy of Education.....	thirty-six weeks

Twelve credits (one year's work) are necessary for graduation from this course. It is required that at least three credits shall be made in Educational Psychology, two in Observation and Practice, two in Methods of Instruction and one in History of Education. The remaining four may be made in the other pedagogical subjects of the course, or in such academic subjects offered in the various courses as the student may elect. Only such persons are eligible to take this course as have graduated from standard colleges or universities, or are the holders of Life State Licenses to teach in Indiana. Persons completing this course are entitled to diplomas as provided by law.

Report of the Board of Official Visitors, 1906—1907.

(Extract from an Act approved March 5, 1873.)

The State Board of Education shall appoint annually in the month of June, or at its first meeting thereafter, a committee of three, who shall constitute a Board of Visitors, and shall in a body or by one of their number visit said school once during each term and witness the exercises and otherwise inspect the condition of the school, and by the close of the Normal School year they shall make a report to the Board of Trustees. The members of said Board of Visitors shall be allowed five dollars for each day's service rendered, and also traveling expenses, to be paid out of the State treasury.

To the Board of Trustees of the Indiana State Normal School:

Gentlemen—The Board of Official Visitors appointed to inspect the Indiana State Normal School spent May 22-24, 1907, in making their investigation as thorough as the limited time would permit. As a result the following report is submitted:

As far as possible, each department received attention. To say that the organization and management are all that could be desired is but to repeat what is already known to every educator of prominence, not only in the State but other states as well.

Every teacher, as well as every pupil, seemed to realize the specific purpose for which he was in the school, and without any apparent effort this purpose was being accomplished.

The courses of study and the methods of instruction in the different departments are in the highest degree adapted to the needs of the students and to the great purpose of the institution—the training of teachers for the common schools.

The institution is in fact what it is in name—a *normal school*, and while there is much academic work done, it is always done from a professional point of view.

It is the judgment of your committee that the institution is fulfilling the purpose for which it was established, that of not only doing the most efficient classroom work but of working out new and advanced ideas in methods.

The maturity of the students in both age and experience gives them a large degree of self-control and of personal freedom, which are so necessary for the development of individual character. In no place, however, in the institution did we see anything but the highest standard of personal conduct exhibited by any of the student body.

The training schools are models in every respect, and ample opportunity is given each student to do much observation and actual teaching before completing his course of study. The institution has acted wisely in establishing a model district school in which, under the direction of such a teacher as the new law contemplates, the ordinary country school may be seen at work.

In view of the fact that agriculture has been made a part of the course of study in the rural schools of the state, and that the needs of the township graded schools are so important, your committee would suggest that at as early a date as possible you include in your equipment a township graded school where practical courses in manual training and agriculture are worked out.

We commend the establishment of a full high school course in connection with the training school, as it will afford a much needed opportunity for the better preparation of high school teachers.

The library is one of the largest and best selected in connection with any normal school. The institution is to be congratulated upon the fact that it will have a fire proof building sufficiently large to provide adequately for the preservation and use of the present valuable collection of books and also for the further growth of the library.

Your committee was impressed with the need of a closer supervision of the institution over the rooming and boarding places of the students. Since, under the present conditions, each student must provide himself with accommodations for room and board, and since many of those who come to the city are unacquainted with it, necessitating difficulty in finding suitable rooming places, we would urge such an appropriation as would provide for at least a ladies' dormitory large enough to accomodate one hundred or one hundred and fifty ladies. This should be placed under the control of the faculty of the school. It could be made self-sustaining, and would not only give a standard of prices, thus greatly reducing the expense to the student, but would also be a great factor in directing the social life of the school.

Since the State Normal School is the head of the system of training schools of the state, we recommend that ample funds be provided for experimental purposes, thus enabling it to give in the future, as it has in the past, the highest standard of educational methods.

Respectfully submitted,

H. B. BROWN,

T. A. MOTT,

LAWRENCE McTURNAN,

Committee.

Report of the Board of Official Visitors, 1907—1908.

CRAWFORDSVILLE, INDIANA, October 20, 1908.

*To the Board of Trustees of the Indiana State Normal School,
Terre Haute, Indiana:*

Gentlemen—The board of official visitors appointed to visit the Indiana State Normal School, Terre Haute, Indiana, visited the Normal School during the week beginning June 1, 1908, and desires to present the following report:

The institution has a large enrollment, numbering more than 1,800 students. The spring term brings in a multitude of young men and women who have been teaching during the winter months. These are usually very earnest students who are anxious to take advantage of every opportunity for improvement. At the same time such an influx as that of this year leads us to ask whether there ought not to be something done either to limit the number of students or to enlarge the facilities of the institution. A partial answer to this question is the magnificent library building which is now in process of construction. The present library room is by far too limited and cramped for the multitude of students who make use of it, especially during the spring term.

We are of the opinion that the Normal School is excellently managed and all its affairs ably administered. The specific purpose of the institution is to prepare teachers for the public schools. This purpose seems to be kept in view. While the classes in some cases are necessarily large, too large, we were pleased to note the air of genuine enthusiasm on the part of teachers and students in every department visited.

Throughout the instruction is of a high order. Both the heads of the departments and their assistants seem well qualified and competent. Everything moves according to a well studied program.

The departments are well prepared with materials for work. All academic studies attempted are taught as thoroughly as possible with a view to fulfill the chief end of the school, viz., preparation for teaching.

We desire to commend the management of the new Model School. Certainly no art, least of all teaching, is to be learned except by practice.

The Rural Training School, established for the purpose of giving students an opportunity to observe and practice in such school, is unquestionably a very valuable adjunct to the Normal School. Every teacher who is looking forward to service in the rural schools of the State ought to have some touch of this work. Organization, classification and the general management of a rural school requires as much forethought and skill, if well done, as the management of a factory. Besides, the raw material used is vastly more valuable.

In this regard it ought not to be forgotten that much of the teaching in the one-room rural school is what we call "primary work." Perhaps we might suggest that this fact ought not to be forgotten in the course of the excellent work in the "Model School." A child poorly taught during the first five years of school is handicapped more or less throughout his educational career.

We were pleased to note the excellent method employed in the Department of Music. Perhaps it is too much to hope that the day is near when singing will be as well taught as arithmetic in the common schools. The work of the Music Department in the Indiana State Normal School is at least calculated to hasten this day.

The library, though, as before noted, in rather cramped quarters, is large, well selected and well managed. Students now work in crowds in the small spaces available for such uses. The completion of the new building will remove this complaint and furnish ample opportunity for all purposes that pertain to library work. This building is at once a great convenience to the Normal School and a great credit to the State of Indiana. It is solid and substantial to an unusual degree in construction, and beautiful architecturally. The cost of the building is no greater than the cost of an ugly building; its value is much greater. This is especially true of buildings devoted to educational uses. It is no small advantage, therefore, to have the new library building so designed and constructed as to be significant of its uses and beautiful as well. Thus the very structure itself, not to speak of its precious contents, will have educative value. We commend the design and construction of the library building as worthy of the new day when colleges and schools shall no longer forget the uses of the beautiful in every department of life.

The general tone of the Normal School is fine and wholesome. The relations existing between the various departments and between students and instructors is sympathetic, co-operative and rational.

Your committee desires to say in conclusion that it considers the Indiana State Normal School to be admirably organized and fitted to do its peculiar work. No other institution in the State can duplicate or approximate this work in its excellency and completeness. Other state and non-state colleges and schools are fulfilling their functions more or less successfully in the general fields of education. The Indiana State Normal School occupies its own field and will continue to do so, and thus will hold the confidence and command the support of the public.

Respectfully submitted,

GEORGE L. MACKINTOSH,

President of Wabash College.

WILLIAM L. COFFEY,

Superintendent of Brown County Schools.

Needs of the School.

As will be seen by the statistical table included in this report, the school had during the year ending September 30, 1908, 3,049 students pursuing Normal School Teachers' courses, and 243 pupils in the training school, making a total of 3,291 different students. To provide teachers, laboratory facilities, classrooms, laboratories and all else needed for this great body of students requires a larger sum of money than the tax levied for the support of the State Normal School produces. By June 30, 1909, our new library building will, it is presumed, be ready for use. This will require two additional librarians, one additional janitor, another engineer and fireman, and an outlay of not less than \$1,000 per year for heating and ventilating. To complete the high school faculty will require two additional teachers. Reports submitted to me by the various heads of departments show that, to carry on the work of these departments in such way as to meet the increased needs of the large number of students in each would require several additional members of the faculty.

To these demands should be added the consideration that, while the salaries of the various members of the faculty are no higher than several years ago, living expenses have materially increased. It is impossible for the members of our faculty to live comfortably and to make any adequate provision for the needs of themselves and families when they shall cease to be able to carry on their work, on the salaries now paid them.

To meet all these needs of the school there should be an increase of at least thirty-three and one-third per cent in the resources of the institution. I recommend, therefore, that the board of trustees appeal to the next General Assembly for an increase in the tax for the support of the State Normal School that will yield thirty-three and one-third per cent more than is now received.

As already explained, the school has expanded very rapidly in recent years. The attendance is now so large that it is impossible to make proper provision for the instruction in Manual Training and in the various branches of science in our present buildings. The laboratories are inadequate in size and insufficient in equipment. It is not too much to say that the State Normal School has not today a single modern, thoroughly well-equipped laboratory

for teaching any science subject. We are attempting to do work in Experimental Psychology, Botany, Physics, Zoölogy, Chemistry, Geography, Geology, Physiology and other science subjects, all of which are required by the teacher of today, with facilities that are entirely inadequate. Some months ago I appointed a competent committee of the faculty to consider this subject and to make preliminary plans for a suitable building to be devoted to the work of Manual Training and the various natural science subjects. This committee gave much time and study to this subject and reached the conclusion that the Normal School should ask the General Assembly for an appropriation of \$150,000 for the purchase of a site for, and the erection thereon of, a suitable modern, fireproof building in which to carry on its work in Manual Training and the various natural science subjects. I give this recommendation my unqualified approval, believing that the needs of the school require this.

Respectfully submitted,

WILLIAM W. PARSONS,

President of Faculty.

Report of the Secretary of the Board of Trustees.

INDIANA STATE NORMAL SCHOOL,
TERRE HAUTE, IND., Oct. 1, 1907.

Hon. William H. Armstrong, President:

Dear Sir—I herewith submit my report of the receipts and expenditures of the Indiana State Normal School for the eleven months ending September 30, 1907:

Balance in treasury September 30, 1908, current fund.....	4,697 25
Total	\$10,616 22

NOTE.—To the balance of \$4,697.25, as shown above, should be added the special time deposit as shown below, as \$1,000.00, made February 1, 1908, by order of the State Finance Board, making a total balance in the bank September 30, 1908, of \$5,697.25.

The special time deposit is not carried on the bank book as a balance, it having been checked out as an expenditure.

SPECIAL TIME DEPOSIT FUND.—LIBRARY.

Amount transferred from library fund February 1, 1908.....	\$1,000 00
Balance in treasury September 30, 1908.....	\$1,000 00

TRAINING SCHOOL BUILDING FUND.

Balance in treasury October 1, 1907.....	\$10,300 00
Paid out on secretary's orders as follows:	
Transferred to reimburse general fund.....	\$7,580 15
J. F. Alexander & Son, architects, plans, etc.....	216 17
John W. Ebel, lettering.....	22 50
H. Stuckwish Co., painting auditorium.....	109 00
J. M. Sherman, plans for fire escape.....	20 00
T. H. Stove & Furnace Co., changing radiators.....	1 00
C. C. Smith Sons Co., hardware per contract.....	74 50
Markle Electric Co., bells and wiring.....	65 00
American Seating Co., opera, arm chairs and desk...	1,079 24
The Baldwin Co., piano.....	500 00
Economy Electric Co., incandescent lights.....	43 00
Miller Electric Co., labor and material.....	1 80
O'Neill & Son Machine Works, fire escape.....	236 94
Charles H. Nicholas, chandellers.....	280 50
A. Z. Foster Co., mats, rugs and shades.....	70 20
	\$10,300 00

The funds of the institution are paid out only on the presentation of itemized bills, approved by the Board of Trustees, which are duly receipted and paid. These vouchers are then filed with the Auditor of State and duplicates of the same are preserved in the institution's fireproof vault.

The report of the Treasurer agrees with that of the Secretary in showing a balance on hand in the General Fund of \$47,044.08 and in the Library Fund \$5,697.25. Attention is called to the fact that the scholastic year does not correspond with the state's fiscal year. Only one-tenth of the school year is past, and the balance on hand at the end of the fiscal year, with what is received on the first of the following January, must carry the school through the remaining nine months of the academic year.

Respectfully submitted,

JOSHUA JUMP,
Secretary.

SPECIAL TIME DEPOSIT FUND—LIBRARY.

Amount transferred from Library Fund February 1, 1908.....	\$1,000 00
Balance in treasury September 30, 1908.....	\$1,000 00

Respectfully submitted,

W. R. McKEEN,

Treasurer.

NINETEENTH ANNUAL REPORT

Of the Board of Trustees and
Medical Superintendent
of the

Eastern Indiana Hospital for the Insane .

AT

EASTHAVEN, NEAR RICHMOND

FOR THE

Fiscal Year Ending September 30, 1908

To the Governor

INDIANAPOLIS:

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING,
1908.

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
November 24, 1908. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE.
INDIANAPOLIS, November 30, 1908. }

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

JOHN C. BILLHEIMER,
Auditor of State.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, November 30, 1908.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer, December 1, 1908.

HARRY SLOUGH,
Clerk Printing Bureau.

EASTERN INDIANA HOSPITAL FOR THE INSANE.

1908.

BOARD OF TRUSTEES.

FRED. W. MAYER, M. D.....	Medical Interne
JOHN P. THISTLETHWAITE.....	Steward
BRADFORD HARRISON	Storekeeper
HARRY T. BEST.....	Apothecary
MINNIE YOUNG	Secretary

REPORT OF BOARD OF TRUSTEES.

HON. J. FRANK HANLY,
Governor of Indiana:

Sir—Complying with the law, the Board of Trustees of the Eastern Indiana Hospital for the Insane, begs leave to respectfully submit its report for the present fiscal year ending September 30, 1908, as follows:

There have been no changes among the members of the Board during the year. The term of office of John W. Hanan expired January 1, 1908, and he was reappointed by you to succeed himself for a term of four years, ending January 1, 1912.

On April 14, 1908, at the time prescribed by law, the organization of the Board was continued for another year, as follows:

John W. Hanan	President
John Detamore	Vice-President
Edward Barrett	Secretary
Joseph L. Cowing.....	Treasurer

FINANCES.

The regular funds provided for the year were for maintenance, repairs and clothing, and certain specific funds for improvements and major repairs. These have been applied as contemplated by the law and are elsewhere reported in detail.

The fund for maintenance was inadequate for the requirements of the year and a deficit, imminent for two or three months, was averted only by numerous sacrifices reluctantly made. Likewise the repair fund was too limited, but its application did not present the difficulties of the former. This embarrassment was due to the higher cost of general supplies and labor, and while there was some relief by the depression in general business during the latter part

of the year it was not sufficient to compensate for the excessive cost of the earlier part of the year. In view of these hardships the Board congratulates itself on having closed the year without any indebtedness, thereby continuing the excellent financial record of the Hospital for another year. The methods of accounting, the purchase of supplies by competitive bids, and the care of personal property heretofore described in these reports, have been continued with satisfactory results. During the past year more supplies than hitherto have been purchased from the Reformatory, as the law requires, and these have been quite satisfactory, both in cost and quality.

The repairs have been well kept up and the structures are all in good condition, their age considered. The cost of repairs increases with the age and growth of the Institution, and this fund should be increased for the ensuing biennial period.

The clothing fund was sufficient for the needs, and permitted an ample supply of comfortable clothing for all dependent patients. With the increase in the number of patients, by reason of the new cottages recently put into service, will be required a slight increase in this fund.

The specific funds, with a single exception, have been applied as contemplated. The limited time allotted by the law, which confined the work of all these improvements to a single year, worked a serious but unavoidable hardship. The amendments to the law wisely enacted by the late special session of the legislature will prevent a repetition of these complications in the future.

The Legislature of 1907 provided eight specific funds, making them available October 1, 1907, excepting only that for a railway crossing, which was made available April 1, 1907. This fund for a railway crossing amounted to \$2,500, of which \$1,279.92 was disbursed during the fiscal year ending September 30, 1907, as shown in the report of that year, and the balance, \$1,220.08, was expended during the past year for the completion of the work. The improvement secured consists of an entrance to the premises through the right-of-way of the P., C., C. & St. L. Railway

Company, with a driveway and a cement walk extending from the Administration Building to the street car terminus, a distance of 600 feet.

A specific fund of \$60,000 was provided for two cottages and their appurtenances. In view of the urgent need of these cottages, this fund with your consent was anticipated, as has been previously reported, and the work of construction was started under a contract made July, 1907. Before making this contract and when the bids were opened, it was found that the lowest bid exceeded the estimate previously made and the available fund by about \$4,500, and acting upon the advice of the Attorney-General and your considerate proffer to provide the equipment out of your emergency fund, a contract was entered into for the construction only of the cottages and their appurtenances, and the work was started in August, 1907. After many vexatious delays the structures were finally completed and accepted one year thereafter, at a cost of \$60,000. The equipment was provided for out of your emergency fund at a total cost of \$4,095.84.

These two cottages, known as Cottages M and 14, are located in proximity to the Hospital cottages in either department, to which they are attached by intervening diet kitchens and covered corridors. They each have a capacity of forty beds for infirm patients and the diet kitchens provide the special diet for the sick of the attached Hospital cottages and the infirm of the new cottages. These improvements constitute a very valuable feature of the Institution's general equipment, in addition to increasing its capacity with eighty beds.

The fund of \$2,000 for tile floors and plumbing, permitting the continuance of the work of improving the plumbing in various parts of the Institution and new sanitary floors to be placed in ten bathrooms, toilet rooms and sculleries. This work is not yet complete, but it is the purpose to continue it from year to year until modern plumbing is in use throughout.

The fund of \$5,000 was expended for improvements in the steam heating system. The old gravity system was

converted into a Webster vacuum system, and the pipe lines were repaired as far as the available funds would permit. This plant has been in service for nearly twenty years, and while it is much improved, many repairs are still needed before it can reach the highest degree of efficiency, a condition made necessary by the load added by the extension of the past year. The recommendations made elsewhere are intended to meet this requirement.

The specific fund of \$2,000 for farm buildings was used as contemplated for remodelling and improving the dairy barn, with very satisfactory results. A modern, convenient and sanitary barn is now ready for service, at a cost of \$1,994.84.

A fund of \$2,000 was provided for an engineer's workshop and lathe, and a very substantial shop has been built at a cost of \$1,916.72. It is a brick and cement structure 32 feet wide and 52 feet long, with a basement for a store room. The balance of \$83.28 would not purchase a lathe sufficiently large for our purposes, and was returned to the general fund of the State Treasury at the end of the year.

The improvements in the attics of Cottages A-B and 1-2, contemplated by the fund of \$1,800, were very satisfactorily made within the appropriation, and these attics now contain very satisfactory quarters for the night service.

The fund of \$2,500 for the water supply was applied in part only, for want of time in which to do the work contemplated. A four-inch water main 2,400 feet long was laid to the dairy barn, two fire hydrants installed near the barn, one near the stable and one near Cottage I-J, at a cost of \$1,389.87. The balance of \$1,110.13 was permitted to revert to the general fund.

The improvements and minor repairs made by these several specific funds have enhanced the conveniences and sanitation of the Hospital very much and justified the expenditures necessary to their accomplishment.

The report of the Medical Superintendent, hereto appended, contains exhibits setting forth in detail the receipts and disbursements of all funds, of which a summary follows:

FISCAL YEAR 1907-1908.

Drawn from State Treasury		\$214,821 84
Disbursed for maintenance	\$123,301 93	
Disbursed for repairs	7,447 35	
Disbursed for clothing	4,656 14	
Disbursed for specific purposes	79,416 42	
Total	\$214,821 84	\$214,821 84
Maintenance—

Earnings—

Receipts from sales		\$181 98
Covered into general fund.....	\$181 98	
Total	\$181 98	\$181 98

Balances covered into the general fund of the State treasury on September 30, 1908, amounted to \$2,403.08, of which \$1,203.58 were balances from the regular funds, and \$1,199.50 from the specific funds.

Cost per capita of maintenance	\$166 71
Cost per capita of repairs	10 00
Cost per capita of clothing	6 24
Total cost per capita.....	\$182 95

The inventory of property of September 30, 1908, shows a valuation of \$922,348.39.

GENERAL.

The enrollment of patients October 1, 1907, was 752; admitted during the year, 131; discharged, 54; died, 40; enrolled September 30, 1908, 789; and present September 30, 1908, 779.

By the construction and equipment of Cottages M and 14, with forty beds each, the capacity of the Hospital was raised during the year to 831 beds. Reserving fifteen beds in either Hospital cottage for the sick, the normal capacity is now 801. This increase in the accommodations has afforded much relief to the Eastern District, but unfortunately will not long be apparent, as already the Department for Men is nearly full and will be again overcrowded within a few weeks. The conditions are not so serious in the Department for Women, where all the recent cases applying during the past year have been admitted without delay, and with another cottage now available it is confidently expected that the insane women can be promptly received during the next year or so.

Your Board, however, views with no little apprehension the conditions which will doubtless obtain in this district during the coming two years relative to the insane men who

cannot be admitted for want of room. It entertains the hope that some relief may be afforded indirectly, at least, by the early completion of the new Southeastern Hospital, by amendments to the law which will permit the insane epileptics to be admitted to the Village for Epileptics, and by legislation making special provision for the insane criminals. Certainly this Hospital cannot be further enlarged, except by colonization, at any reasonable cost, as the central plant is already so heavily overburdened that we feel obliged to recommend a specific appropriation for immediate extensive improvements to put it in condition to furnish the necessary heat and power for the existing structures and population.

RECOMMENDATIONS.

It is the unanimous opinion of the members of this Board that the appropriations for maintenance and repairs should be increased and that specific funds should be provided for improving the mechanical equipment and extending the medical service. The maintenance fund for the current year is inadequate and should be immediately increased. Therefore, we respectfully recommend the following appropriations:

Regular Funds—

1. \$10,000 for maintenance, to be immediately available for the current year.
2. \$148,000 annually for 800 patients and \$180 per capita for any excess.
3. \$10,000 annually for repairs.
4. \$6,000 annually for clothing.

Specific Funds—

1. \$14,000 for the mechanical equipment.
2. \$8,500 for the medical equipment.

In conclusion, we are gratified to be able to report the general condition of the Hospital good throughout. Notwithstanding the hardships of the past year, the service has been well maintained and much better than seemed possible during the gloomy months of the early part of the year.

The splendid sanitation of all parts of the institution, although seriously overcrowded, is a source of no little comfort to us. The patients have received good care and conscientious attention, in as large numbers as the accommodations at our disposal would permit.

Respectfully submitted,

JOHN W. HANAN, President.
J. DETAMORE,
JOSEPH L. COWING,
EDWARD BARRETT,
Board of Trustees.

EASTHAVEN,
October 31, 1908.

REPORT OF MEDICAL SUPERINTENDENT.

To the Board of Trustees:

Gentlemen—I beg leave to submit the following report of the Hospital for the fiscal year ending September 30, 1908:

MOVEMENT OF PATIENTS.

FISCAL YEAR 1907-8.

	Men.	Women.	Total.
Enrolled September 30, 1907.....	363	389	752
Admitted	62	69	131
Discharged	18	36	54
Recovered	8	19	27
Improved	9	17	26
Unimproved	1	..	1
Died	21	19	40
Enrolled September 30, 1908.....	386	403	789
Average number present	358.6	385.8	744.4
Average number enrolled	364.9	396.7	761.6

MEDICAL HISTORY.

Since the opening of the Hospital, August 1, 1890, 2,690 patients have been admitted, of whom 1,359 were men and 1,331 were women. Of this number 625 were discharged as recovered, 430 improved, 59 unimproved, 11 idiotic, 16 not insane, 30 were transferred to other hospitals, and 730 died while under treatment.

The whole number under treatment during the year was 883—425 men and 458 women.

Admissions.—During the year there were 131 admissions—62 men and 69 women. Of this number 58 were classified as presumably curable and 73 as incurable. Of the curable conditions, 26, or 44 per cent., were cases of melancholia in acute forms; 30, or 51 per cent., were cases of mania in acute forms, and two were cases of toxic insanity.

Of the incurable conditions, 24 were cases of chronic mania, 6 recurrent mania, 22 chronic dementia, 2 dementia with paralysis, 3 organic dementia, 13 paretic dementia, 2 paranoia, and 1 epileptic dementia.

Of the presumably curable cases, 11, or 19 per cent., were recurrent in character, and of these 9 were second admissions and 2 were third admissions.

The ages of the 131 admitted cases were classified as follows: Seven were under 20 years, 23 between 20 and 30 years, 32 between 30 and 40 years, 33 between 40 and 50 years, 26 between 50 and 60 years, 6 between 60 and 70 years, and 4 over 70 years of age.

The duration of disease was three months or less in 43 cases, six months in 16 cases, nine months in 6 cases, one year in 23 cases, two years in 16 cases, three years in 8 cases, and five years and over in 19 cases.

Only six of the admissions were foreign born.

Discharged Cases.—There were discharged during the year 18 men and 36 women—total 54. Of these 27 were recovered, 26 improved and 1 unimproved. Of those recovered, 8 were men and 19 were women. The number recovered was 20.6 per cent. of the number of admissions, 20.1 per cent. of the whole number of presumably curable cases under treatment, and 49.6 per cent. of the number of curable cases under treatment.

The psychoses of those recovered were melancholia in 9 cases, acute mania in 14 cases, toxic insanity in one case, chronic mania in 2 cases and recurrent mania in one case.

The approximate ages of those recovered were as follows: One was under 20 years, 7 between 20 and 30 years, 7 between 30 and 40 years, 8 between 40 and 50 years, and 4 between 50 and 60 years.

There were discharged, improved, 9 men and 17 women—total 26; unimproved, 1 man.

During the year one alien was deported to his native land by the United States Bureau of Immigration within one month after his admission to the Hospital. This patient, it was learned, had had previous attacks of insanity and had at least once been an inmate of a hospital for the

insane in Germany, and action was based upon the belief that his disease was due to causes existing prior to his arrival in this country.

Mortality Record.—During the year there were 40 deaths—21 men and 19 women, or 4.5 per cent. of the whole number under treatment. Of these, 5, or 12.5 per cent., were due to tuberculosis; 7, or 17.5 per cent., to general paresis, and 10, or 25 per cent., to organic brain disease.

One fatality is regretfully reported in a youth suffering from an advanced psychosis, who escaped from his dormitory on a winter morning during a severe blizzard and fatally exposed himself before he could be overtaken and returned.

The death rate of the year was exceptionally low. The increase in the number of deaths from organic brain disease is notable, as is, also, the decrease in the number due to tuberculosis.

The appended medical tables set forth fully the movement of patients during the year.

General.—At the close of the year there were only six demonstrated cases of tuberculosis in the Hospital. This statement shows a decrease during the past two years. The infection has been kept in control by rigid sanitary practices and such segregation as the mental condition of the patients would permit. The loggias on the second floor of the Hospital afford an excellent place for the application of the open-air treatment, as the improved condition of certain cases so treated testifies. The greatest danger from this disease comes to us from the newly admitted cases in advanced stages of tuberculosis and with active mental symptoms, which made safe isolation and full control of their personal habits impossible.

The development of several cases of smallpox in our immediate vicinity and within sight of the Hospital during the year, occasioned no little anxiety and made necessary the revaccination of all employed persons and the enforcement of certain rigid precautionary rules relative to visiting. No cases developed within our borders.

There were no cases of typhoid fever during the year.

The overcrowding has more seriously hampered the methods of treatment than ever before. This was true particularly in the Department for Men. Crowded largely by chronic cases, it was impossible to admit promptly the acute cases as they developed in the district. All new curable cases were delayed in their admission for a longer or shorter period, and this accounts for the decreased number of discharged cases from that department.

The disordered classification so often deplored in these reports continued until the latter part of the year, when some relief was afforded by the opening of the new infirmatory cottage in the Department for Men. A similar cottage is now ready for service in the Department for Women. These additional accommodations will improve the facilities for treatment, but in view of the growth of population, other means, elsewhere recommended in this report, must be provided in order to maintain the standard already established and enable us to keep abreast with the progress in medical treatment and management.

Notwithstanding the unavoidable limitations of the past year, the medical service has been excellent, and faithfully done. The surgical work notably has increased with very satisfactory results.

The usual efforts for the occupation and wholesome amusement of the patients have continued, and while they impose heavy duties, particularly upon the medical staff, they have a therapeutic value which justifies them.

The general sanitation is cause for congratulation. The severe test of the efficiency of the water supply applied by the unusual drought of the past year demonstrates its excellence both in quantity and quality. There was apparently no diminution of the supply, although about one hundred thousand gallons were pumped daily during the dry season, and its high quality was maintained. The sewage purification plant continues to perform its functions with surprising thoroughness, automatically, and with a cost for maintenance insignificantly small. The condition of the buildings and their environs is good, and the heating and ventilation satisfactory.

ACCOMMODATIONS.

The late addition of two cottages with forty beds each, one in either department, furnishes a total capacity of 831 beds, of which fifteen in either hospital cottage are reserved for the sick and acute cases requiring special treatment and nursing. This affords an available working capacity of 801 beds.

The number present on the last day of the year was 779, and 789 were enrolled. Even with the late extensions only a few vacancies are left, and these mainly in the Department for Women.

The number of applications for admission during the year was 197, and of these 131 were admitted, 37 were suspended for want of room, 24 were withdrawn and 5 were rejected as inadmissible. The average number of applications from the sixteen counties comprising the Eastern District is 213 annually.

With this statement of the capacity of the institution and number of applications, it is apparent that the Department for Men, at least, will within two or three months be as seriously overcrowded as it was during the past two or three years, notwithstanding the late increase of accommodations.

Fortunately, our Department for Women has been large enough during the past few years to permit the prompt admission of every acute case in the district, and with one more cottage now available it is probable that the insane woman can be received and placed under treatment with little or no delay.

The frequent reference in these reports to the overcrowded condition of the Hospital, as well as the long list of applicants for admission, do not justify the inference that insanity in this district is increasing at an alarming rate. While the disease in its relation to the population is increasing slightly, the discrepancy between the capacity of the Hospital and the number of suspended cases is not a safe index to the rate of increase of insanity in this community. It must be borne in mind that the growth of the Hos-

pital has been intermittent, and during the past several years it has had a deficiency in its accommodations of 100 to 200 beds. At no time have all the insane in the district been cared for by the State, and when the new cottages are filled, as they soon will be, there will remain no less than 100 cases unprovided for in the Eastern District.

The conviction, so often expressed in these reports, is repeated that this excess can be best provided for by a system of colonization rather than by occasional additions to this Hospital, which long since outgrew its central construction and mechanical equipment. It is certain that the capacity of the latter cannot be adequately extended without enormous cost, and the former affords opportunity for unlimited growth at a reasonable expenditure of funds.

It appears now that the excess of insane population in the Central District will more than fill the new Southeastern Hospital at Madison, when completed, and therefore there is little or no hope of a transfer of any counties from this to the Southeastern District. If, then, the plan of colonization is not approved, the day is not distant, if not already at hand, when our system of state care will demand another hospital to be located in the northeastern section of the State.

It is my belief that some relief would be afforded this and the other hospitals for the insane by amending the organic act of the Village for Epileptics and permitting all classes of epileptics to be admitted to that institution. This would authorize the transfer of the epileptics from the hospitals to the Village for Epileptics, and eliminate them from the waiting list for admission to the hospitals. This action would, of course, require extensive additions to the Village for Epileptics, but having been wisely founded, there is no good reason why its development should not be much more rapid and in the direction of the most good to the greatest number.

Furthermore, the time has arrived, in my judgment, when special provision should be made for the care of the insane criminals and probably also for the criminal insane

of the State. The number of insane criminals in the prison, reformatory and hospitals is steadily increasing, and at the present time there are about one hundred and twenty-five in need of special care. Some years ago, when the number was only one-half as many, I advocated the establishment of a colony for this class in connection with one of the hospitals, but since the number has more than doubled, the conviction has grown that this class should be entirely removed from the Hospitals and provided for, preferably in a special institution constructed with certain prison features. If this cannot now be done, a colony in connection with the State prison, which may ultimately grow into a separate institution, suggests itself as feasible and next desirable. Some action in this direction is urgent and should be taken at an early day.

FINANCES.

The following funds were available for this fiscal year:

Regular Funds—

Maintenance for 725 patients	\$121,000 00
Maintenance for 19+ patients at \$160.....	3,109 00
<hr/>	
Total maintenance fund.....	\$124,109 00
Repairs	7,500 00
Clothing	5,000 00

Specific Funds—

1. Balance for railway crossing.....	\$1,220 08
2. Two cottages and appurtenances.....	60,000 00
3. Tile floors and plumbing.....	2,000 00
4. Steam heating system	5,000 00
5. Farm buildings	2,000 00
6. Workshop and lathe	2,000 00
7. Attics in two buildings.....	1,800 00
8. Water supply	2,500 00
9. Equipment, Cottages M and 14—Governor's Fund.....	4,095 84

Total available funds.....	\$217,224 92
----------------------------	--------------

The total disbursements for all purposes were \$214,821.84, and are classified as follows:

Subsistence	\$41,202 97
Trustees' and officers' salaries.....	11,814 24
Attendants' wages	21,052 54
Employes' wages	17,362 17
Fuel, light and other expenditures.....	31,870 01
Repairs	7,447 35
Clothing	4,656 14
Specific purposes	79,416 42

These disbursements include \$4,095.84 allowed from the Governor's emergency fund for the equipment of two cottages.

Unexpended balances from the above funds aggregating \$2,403.08 were covered into the general fund of the State treasury at the end of the fiscal year, and of this amount \$1,203.58 were from the regular funds and \$1,199.50 from the specific funds.

Cost per capita of maintenance	\$166 71
Cost per capita of repairs	10 00
Cost per capita of clothing	6 24

Total cost per capita.....\$182 95

The receipts from sales for the year amounted to \$181.98, Exhibit 17, and this sum was covered into the general fund of the State treasury in monthly reports to the Auditor of State as is required by law.

The summary of the inventory of September 30, 1908, is set forth in Exhibit 18.

Maintenance.—The institution was maintained within the regular appropriation, and at the end of the year there was no indebtedness of any kind.

The maintenance fund was, however, insufficient, and owing to the increased cost of subsistence supplies and labor the danger of a deficit was never more imminent in the entire history of the Hospital than during the past year. This danger was anticipated in the report of one year ago, when the preference was expressed for a deficit rather than a lower standard of care. Then it appeared impossible to maintain the organization demanded by the overcrowded

condition of the wards without a considerable increase in the scale of wages, which the fund would not permit, but early in the year the unexpected depression in general business throughout the land brought more applications for work and thereby made possible the temporary solution of a difficult problem in the affairs of this Hospital. While a deficit was avoided, for which the management is very grateful, although regretting that it was made possible by the business misfortunes of others, the organization has been unstable and therefore not very satisfactory. The relatively low wage scale for nurses, attendants and certain subordinate positions, is responsible for the numerous changes in the organization, and the recommendation is submitted for increasing it with a view to the prevention of the hardships of the past year and the general improvement of the service.

The household equipment has not, for want of funds, been kept up to the usual standard, and there is a deficiency in a few items, which must be supplied early in the ensuing fiscal year.

The appropriation for maintenance for the year was \$121,000, for 725 patients, and an additional allowance of \$160 per annum for each patient in excess of that number, making a total fund of \$124,109

For the ensuing year the same amount has been provided, and the recommendation is made that additional appropriation of \$10,000 be made immediately available for important additions to the pay roll and household equipment.

For the biennial period beginning October 1, 1909, this fund should be made \$148,000 for 800 patients and \$180 per annum for each patient in excess of that number.

Repairs.—The repair fund available was \$7,500, the disbursements amounted to \$7,447.35, and a balance of \$52.65 reverted to the general fund of the State treasury. The expenditures from this fund were \$3,085.54 for materials, and \$4,361.54 for labor.

The minor improvements made during the year were such only as were permitted by the several specific funds

and elsewhere referred to in this report. The general repairs were well kept up, and while all are never complete and steadily increase year by year with the age of the structures, the general physical condition of the buildings and mechanical equipment is good. The experience of many years shows that the number and cost of repairs are much increased during the periods of extensive construction both of new buildings and major repairs and alterations, and the past year was no exception to this rule. This is due to the difficulties of adjusting the new to the old, and temporary work so often required to keep buildings in whole or in part in service while the new work is under way. For this reason as well as the high prices of labor and materials prevailing, particularly during the forepart of the year, as much has not been accomplished as was expected at the beginning of the year. The appropriation for repairs for the year was \$7,500. This continues during the ensuing year, but should be increased to \$10,000 annually.

The expenditures from this fund are shown in Exhibits 4 and 5.

The cost of painting during the year was \$2,073.71. At this work always two and a large portion of the time three and four painters were engaged, and it included both inside and outside painting, depending upon the conditions of weather. During the past summer all the porches, verandas, gutters, valleys, tin and iron work of the several structures were painted, as is customary on alternate years. Likewise the storm sash, lawn settees and fly screens, of which there are more than one thousand pieces, annually receive attention. The woodwork, except the ceilings, of all the cottages was varnished and the movable furniture likewise was put in good condition.

From two to four carpenters were employed throughout the year at current repairs of doors, locks, windows, floors and furniture, of which there is always a large quantity in need of attention. In addition they prepared the woodwork for the tile and plastic floors, effected the alterations in the attics for quarters for the night service, made the clothing boxes and shelving in the equipment of the new cottages,

such repairs on porches and verandas as were needed in advance of the painting, and wherever and whenever the woodwork required repairs it has received attention.

The slate and tin roofs, including the gutters and cornice of all buildings, were inspected and repaired according to the annual custom, at a cost this year of \$374.70.

The repairs to the steam, gas and water lines and apparatus outside of the specific work, has gone steadily along throughout the year at a cost of \$2,008.24 for materials and labor. Likewise the old plumbing has received more or less attention, although a plumber has not been regularly employed for this purpose.

Following an inspection by the State Factory Inspector, elevator gates were placed on three elevators, a guard rail built about the dynamos and engines, and the set screw on the laundry shafting protected.

No losses to property were sustained during the year from fire or accident, excepting only damage to a steam boiler, due to low water, by the oversight of an inexperienced fireman.

Clothing.—The fund of \$5,000 for clothing was sufficient for the needs of the past year. The clothing for men was in the main supplied by the Indiana Reformatory and has been quite satisfactory. In view of the growing population, the clothing fund for ensuing biennial period should be increased to \$6,000.

Specific Funds.—The legislature of 1907 made specific appropriations as follows:

1. Railway crossing, available April 1, 1907.....	\$2,500
2. Two cottages and appurtenances.....	60,000
3. Tile floors and plumbing.....	2,000
4. Steam heating system.....	5,000
5. Farm buildings	2,000
6. Workshop and lathe.....	2,000
7. Attics in two buildings.....	1,800
8. Water supply	2,500
Total	\$77,800

The specific fund for the railway crossing was available April 1, 1907, and was in part applied during the fiscal year

ending September 30, 1907, and all other specific funds were available October 1, 1907. The duty imposed by the law requiring these funds with a single exception to be applied for their several purposes within one fiscal year, proved a positive hardship. It was found impossible to complete the contemplated improvements in the water system within the limits imposed, and nearly one-half of that specific appropriation reverted to the general fund at the end of the year. Otherwise these funds have been successfully used and certain substantial improvements were made.

Railway Crossing.—A fund of \$2,500 was appropriated for securing an entrance to the premises through the property of the Pennsylvania Company, was available April 1 of last year and, as reported in the last annual report, the right-of-way was secured only after the railway authorities had exhausted every effort to prevent it, and the crossing was constructed at a cost of \$1,279.92, leaving a balance of \$1,220.08, which was applied during the past year in providing the necessary approaches, a driveway and cement walk. The drive was well made and is 510 feet long, 24 feet wide, excavated 18 inches and filled with gravel 15 inches, with a cement curb and gutter on either side, and underdrained with two lines of 8-inch farm tile. A cement walk four feet wide was built on the west side of the drive throughout its length. This improvement adds much to the convenience of the institution as well as to the general appearance of the grounds. Exhibit 8 shows the expenditures from this fund for both years, classified as follows:

Right-of-way	\$163 10
Wooden crossing on track.....	60 42
Excavating and concrete work for crossing.....	1,056 40
Drive, walk and drains.....	1,220 08
Total	\$2,500 00

Two Cottages—Cottages M and 14 with Diet Kitchens.—A specific fund of \$60,000 contemplated the construction of two cottages—one for men and one for women—each with a small diet kitchen, to be located in proximity to and

connected by covered corridors with the hospital cottage of either department. The motive was to increase the capacity by the addition of eighty beds and to improve the facilities for the better care of the sick and infirm classes. In view of the urgent need of these cottages, particularly in the Department for Men, and the important fact that the funds would, under the new law, be available for one building season only, it was deemed prudent, with the knowledge and consent of the Governor, to anticipate this fund by letting the contract two or three months before it became available. Accordingly plans and specifications were prepared and bids solicited and received at the regular meeting of the Board of Trustees in July, 1907. It was found that the lowest bid was about \$4,500 in excess of the estimates previously made, and that the cottages could be constructed but not equipped within the appropriation. The subject was then submitted to the Governor, who considerably advised that a contract be made for the construction and the work pushed as rapidly as possible, and that the cost of equipment would be met by an allowance from the Governor's emergency fund. Acting upon this advice, a contract was then entered into with Louck & Hill Co. for the construction of the two cottages and their appurtenances, consisting of two diet kitchens and connecting corridors, for the sum of \$54,260.00. This contract did not include the steam heating, plumbing and electrical work, which by preference were installed by the regular force of mechanics. While the work was started at once, it progressed with vexatious slowness, due at first to insufficient labor and later to delayed materials, and was not completed until one year after the contract was made.

These cottages are small and well-built structures, made of common brick and stone with slate roofs, and follow in the main the plan of the hospital cottages to which they are attached by an intervening diet kitchen and covered brick corridors. They provide one vertical ward each with a large day-room, two reception-rooms, two single bed-rooms, a nurses' quarters, bath and clothing rooms and other necessities on the first floor; and on the second floor the sleep-

ing-rooms, consisting of one large and three small dormitories, three single rooms, nurses' quarters, bath-room and necessary closets. Two large loggias on the second floor are enclosed with wire guards and communicate with the dormitories in such manner as to provide convenient open-air sleeping apartments for such patients as require this treatment. White vitreous tile floors are in the bath and toilet rooms and the sanitary fixtures are white vitreous ware except the bath-tubs, which are enameled iron. The capacity of each cottage is forty beds, and they are known as Cottage M and Cottage 14, and are intended for infirm patients.

The diet kitchens are similarly constructed and consist of only one floor and a basement. They are 36 feet wide and 63 feet long and provide a dining-room 19 feet wide and 34 feet long, a diet kitchen 17 feet wide and 28 feet long, a scullery, serving room, cook's bed-room and necessary pantries and closets. The floors are made of encaustic tiles and the ceilings steel. Corridors of brick with slate roofs and cement floors 6 feet 8 inches wide and 24 feet long connect each kitchen with the hospital cottage on one side and with the new infirmary cottage on the other. These diet kitchens, as the name implies, will prepare the special diet for the sick and infirm who will be served either in the attached dining-room or at the bedside as conditions may require.

Cottage M, in the Department for Men, was put into service August 1, 1908, and Cottage 14, Department for Women, was equipped and ready for service at the end of the year.

The specific fund for these cottages permitted their construction but not their equipment, as elsewhere explained. The disbursements from this fund are set forth in Exhibit 9, and the classified expenditures from the fund were as follows:

Contract construction	\$54,918 45
Architect's fees	1,437 50
Steam heating	1,163 19
Plumbing	1,313 01
Electrical work	448 48

Wire guards	270 14
Sewers and cement work	39 30
Furniture	96 15
Paving blocks	313 78
<hr/>	
Total	\$60,000 00

Tile Floors and Plumbing.—The specific appropriation of \$2,000 was applied as contemplated for replacing certain old wooden floors with more sanitary materials, and improvements in the plumbing where most needed. The old floors in six bath-rooms, two toilet-rooms and two sculleries were removed and substantial sanitary floors of tile or asbestolith substituted. The plumbing in the same rooms was either wholly or in part renewed, and that in some other parts of the institution repaired. This work is not yet complete and should be continued from year to year until the old plumbing in service for eighteen years is all renewed.

The disbursements from this fund are shown in Exhibit 10, and are classified as follows:

Tile and asbestolith floors	\$608 96
Plumbing supplies	785 71
Labor	605 33
<hr/>	
Total	\$2,000 00

Steam Heating System.—A specific fund of \$5,000 was appropriated for extensive alterations in the steam heating plant. This was a gravity system installed with the original construction twenty years ago. Some of the steam mains and nearly all of the return lines were in bad condition, and being wholly dependent upon gravity returns for the steam circulation, it was not economical. Moreover, at the time of its installation the hospital was much smaller and contained only about one-half the radiation now in service, and the steam mains as well as the returns were too small for even a fair degree of efficiency.

A careful inspection of the condition of the plant and a study of the more modern systems in vogue, led to the conclusion that a vacuum system would yield the best results for the least expenditure of funds. Since a vacuum system does not require such large mains as a gravity sys-

tem, it was found possible by its adoption to carry the additional radiation without replacing the mains, except where the pipe was defective from age and long service. Accordingly, a contract was entered into with the American Engineering Specialty Company for the necessary apparatus and license for the use of the Warren-Webster vacuum system for the sum of \$3,500.00. The work of changing from one system to another was done under the direction

INFIRMARY
SECOND FLOOR PLAN.

of our chief engineer by additional labor employed for the purpose, and was completed in January of this year after about four months of work.

While all the return lines were not renewed, those in the worst condition were replaced with new pipe and fittings. The fund was insufficient to complete it in the best manner, and much remains to be done during the next sea-

son. The new pipe work is uncovered and much of the old covering is very defective, and this likewise must receive attention during the ensuing year.

While a fair test has not yet been possible for the reasons that the work of repairs was underway throughout the last heating season, that much of the pipe was and is still uncovered, and that the four new structures were heated throughout the winter, although much open and exposed, yet a saving in fuel is already apparent, and it is believed that the additional load of four new structures will be carried without an increase in the fuel consumption and with much better control of the temperatures in the several cottages. If so, this will mean an economy of 12 to 14 per cent. in fuel.

The disbursements on this account are set forth in Exhibit 11, and are classified as follows:

Warren-Webster vacuum system.....	\$3,500 00
Moving storage tank.....	20 00
Tank and foundation.....	46 50
Steam pipe and fittings.....	649 38
Labor	783 34
Total	\$4,999 31

Farm Buildings.—The improvements for which the specific fund of \$2,000 for farm buildings was intended have been made in the alterations of the old dairy barn. This structure was in use on the premises when the latter was purchased by the State more than twenty years ago, and with some minor additions it has served the purpose in an unsanitary way of a dairy barn to this time. The alterations made by this fund have resulted in a substantial wooden barn 39 feet wide and 104 feet long, with a cement floor thoroughly drained, an ample hay loft, and a milk-room outside of but attached to the main building.

For protection in severe weather it is battened outside, and the stall section is ceiled overhead and the sides are lined with two layers of building paper and ceiled with matched boards. It is ventilated by means of foul and fresh air ducts.

The equipment consists of forty James sanitary steel cow stalls, six box stalls, and Star conveyors for feed and litter. It is supplied with water from a new 4-inch water main laid during the past year, which also furnishes necessary fire protection through two street hydrants and an inside standpipe. It will be lighted by electricity as soon as the iron-armored conduit and wire now on hands can be installed. The plan contemplates other minor improvements, but these cannot be carried out until during the ensuing year. When done the barn will be very complete, convenient and sanitary.

The expenditures from this fund are set forth in Exhibit 12, and are classified as follows:

Moving old barn.....	\$35 00
Carting sand and gravel.....	56 00
Steel cow stalls.....	376 00
Electrical supplies	76 28
Steel conveyors	135 49
Iron columns	154 17
Lumber	531 90
Cement work	630 00
<hr/>	
Total	\$1,994 84

Workshop and Lathe.—A specific fund of \$2,000 was appropriated for the construction of an engineer's workshop and a lathe. The former has been built and is complete except a small amount of inside work, which was deferred that the carpenters might complete the dairy barn before the inclement weather. This shop is made of brick with cement foundation, floors and trimmings, and a flat tin roof. It is 32 feet wide and 52 feet long, with a basement eight feet high for storage, and a workroom above. This shop fills a need of long standing and replaces a temporary wooden makeshift which has been in use many years. This construction was done mainly by contract. A lathe was not purchased for the reason that the fund would not permit the purchase of one large enough to justify the expenditure, and a balance of \$83.28 was returned to the general fund for the State treasury.

Exhibit 13 shows the expenditures from this fund, which are classified as follows:

Contract construction	\$1,770 75
Hardware and glass.....	47 47
Cement and cement work.....	98 50
Total	\$1,916 72

Attics in Two Buildings.—The purpose of this specific fund of \$1,800 was the completion of quarters for the night service of the unfinished attics of Cottages A-B and 1-2. In the original construction certain rooms were built in the attics, but the hallways were not completed and no conveniences were provided. This fund permitted a hallway to be made, a bathroom with a tile floor and a complete equipment of sanitary fixtures, and improvements in the lighting, heating and ventilation in both cottages. These quarters are now comfortable, convenient and ample for the present night force.

The disbursements are shown in Exhibit 14, and are classified as follows:

Lumber	\$298 04
Roofing	135 80
Plastering	319 82
Plumbing	248 95
Tile floors	197 61
Labor	366 10
Sanitary fixtures	233 44
Total	\$1,799 76

Water Supply.—A specific fund of \$2,500 was appropriated for improvements of the water supply. For want of time in which to do the work, only part of the improvements were made, and a balance of \$1,110.13 reverted by operation of the law into the general fund of the State treasury at the end of the year. This should be reappropriated and made immediately available.

That part of the fund expended, amounting to \$1,389.87, permitted the extension of a 4-inch water main from the water tower to the dairy barn, a distance of 2,400 feet, where two fire plugs were placed for fire protection. A fire

hydrant was, also, located near Cottage I-J, and fittings put in the line for other contemplated extensions. Another was placed near the new stable and attached to a main laid the previous year. Others should be put near the new cottages and certain extensions of the mains must be made to permit this additional protection. It was the intention to renew one of the pumps in the pumping station, but this too could not be undertaken in the limited time at our disposal.

These expenditures appear in Exhibit 15, and are classified as follows:

Pipe, lead and fittings.....	\$1,267 50
Tile drains	34 87
Labor	87 50
Total	\$1,389 87

Equipment of Cottages M and 14.—In view of the urgent need of these cottages and the insufficiency of the fund for both the construction and equipment, the Governor kindly proffered to equip them out of his emergency fund. This permitted Cottage M for men to be opened August 1, last, and relieved to some extent the pressure for the admission of new cases; otherwise no relief could have been obtained until the next session of the legislature. While the equipment is not complete, it serves for the immediate needs and can be added to from time to time in the future.

The expenditures from the Governor's emergency fund aggregated \$4,095.84, appear in detail as Exhibit 16, and are classified as follows:

Beds and bedding.....	\$1,951 60
Radiator covers	174 00
Chairs	534 00
Electrical fixtures, lamps and wire.....	521 21
Shelving	309 82
Curtains and napery.....	424 44
Cutlery	75 54
Sewer pipe	105 23
Total	\$4,095 84

Recapitulation of Specific Funds.

Total specific appropriations for the year.....	\$76,520 08
Allowance from Governor's Emergency Fund.....	4,095 84

Total specific funds available.....\$80,615 92

Disbursements—

1. Balance for railway crossing.....	\$1,220 08
2. Cottages M and 14, kitchens and equipment...	64,095 84
3. Tile floors and plumbing.....	2,000 00
4. Steam heating system.....	4,999 31
5. Farm buildings	1,994 84
6. Workshop and lathe.....	1,916 72
7. Attics in two buildings.....	1,799 76
8. Water supply	1,389 87

Total disbursements 79,416 42

Balance returned to State treasury..... \$1,199 50

FARM AND GARDEN.

The unfavorable season, due chiefly to the prolonged drought, reduced to some extent the returns from this department. The products for the year were valued at \$11,943.58, and the cost of the farm was \$6,579.24. The increased cost of the farm during the year is chargeable to the higher prices paid for provender, of which the limited acres produce an insufficiency, and to some additions to the equipment, including two horses, wagon and harness.

The year was a very satisfactory one in the dairy, and the ensuing one is even more promising by reason of the conveniences afforded by the new dairy barn, now nearly ready for service. The herd now consists of 31 cows, 7 heifers, and one bull, chiefly Holstein-Friesian stock. As the result of individual tests, quantitative and qualitative, carried on throughout the year by the Agricultural Experiment Station of Purdue University, inferior cows have been dropped from the herd. The same department also applied the tuberculin test and found only two suspected cases of tuberculosis. Both were removed and killed, and autopsies demonstrated the tubercle in one only. As the result of these tests the Agricultural Experiment Station has seen fit to speak in terms of commendation of the herd. The yield of milk for the year was 216,988 pounds.

The piggery has done well during the year and the stock now consists of 160 hogs and pigs. It yielded during the year 28,525 pounds of dressed pork.

The fruit crop was very small, and while the early and midsummer vegetables yielded well, the late crops were cut short by the drought.

The general condition of the farm is good, and most of the land is in an excellent state of cultivation. It is a matter of regret that the acreage is not larger, since the same organization, with the assistance of the able-bodied patients, could increase the quantity of products so much needed in the Hospital were additional land available. The purchase of more land would be a prudent investment.

The alterations in the dairy barn, elsewhere described, were the only important addition to the permanent improvements during the year.

IMPROVEMENTS NEEDED.

While many improvements are needed and would result in economy and better service if made, the recommendations at this time are confined to two or three items only. These are urgent and should have immediate attention.

Mechanical Equipment.—The steam and electrical plants are seriously overburdened, and the water system is incomplete. These plants are in the main old, having been in constant service for nearly twenty years. Some additions have been made to them from time to time, but they have not kept pace with the new buildings, which have largely increased the population. The point at which these plants could be economically and efficiently maintained and operated was passed several years ago, but owing to the pressure for the admission of more patients it was found necessary to erect new buildings for their accommodation, even at the risk of the failure of the central plants to properly heat and illuminate them. With the addition of four more buildings within the past year the load of the central plant has correspondingly increased, and if it can be carried at all, the steam and electrical plants must be kept in the highest state of repair and efficiency. If the alterations

and improvements contemplated can be carried out, they can be made to endure for many years to come; otherwise they must be entirely renewed very soon at large cost.

The improvements contemplated include chiefly new dynamos and engines direct connected, large enough for each unit to carry the entire load day or night; the installation of copper mains of sufficient size to afford a uniform current throughout the institution and to permit the electrification of the laundry, which is now operated by steam power. It is the purpose, also, to improve the system of outside illumination by increasing the number of lamps and running the mains to them in underground conduits. The major portion of the wiring now in use was installed nearly twenty years ago, and therefore does not comply with the underwriters' requirements and should be renewed in such parts at least as are too small and heat when in service. Motors should be installed to operate the machines in the workshops, certain apparatus in the kitchens and bakery, and electric ventilating fans in various parts of the institution.

The work of improving the steam heating system should be continued until it is in the highest possible state of repair, and this requires the enlargement of certain mains, new pipe covering for the greater portion of the steam lines, the rebuilding of most of the indirect radiators, and some additional radiation. The steam boilers will then be less burdened and other boilers will be unnecessary for the present.

The extensions of the water mains, for better service and particularly the fire protection, which were begun but not completed last year for lack of sufficient time in which to make them, and thereby causing over eleven hundred dollars of the specific fund to revert to the general fund, should again be taken up and carried to completion.

It is estimated that these alterations, additions and improvements to the mechanical equipment will cost \$14,000, and a specific fund of this amount is recommended.

Medical Equipment.—The population having largely increased, the necessity for additional medical facilities

now exists. The medical staff not only must be increased, but the medical equipment, also, must be extended. For this purpose a small building should be erected near the administration building to provide five or six commodious rooms especially arranged for dispensary, library and laboratory purposes. The equipment should be modern and fairly complete, with a view to furnishing all necessary apparatus and facilities for thorough investigation, bacteriological, physiological and psychological, for purposes of diagnosis and treatment. This important addition to our armamentarium will require a specific appropriation of \$8,500, and I earnestly commend it for your favorable consideration.

ORGANIZATION.

A few changes in the official staff have taken place during the year. Dr. Kenneth I. Jeffries, after a faithful and commendable service of three and one-half years, resigned the position of junior assistant October 16, 1907, to enter general practice in his native city of Indianapolis. This vacancy was filled most satisfactorily by the promotion of Dr. L. D. Carter, interne in the Department for Men. Dr. William Spaulding of Indianapolis discharged the duties of interne in the Department for Men from October 12, 1907, to August 1, 1908, when he resigned to enter general practice in a distant state. Dr. Fred W. Mayer by appointment became interne in the Department for Men August 3, 1908. Otherwise, the personnel of the official staff remains unchanged, much to my gratification and, as I believe, for the good of the service. All have been faithful and efficient throughout the year, which in some respects has been one of the most arduous in the history of the Hospital. I am pleased to report the heads of the departments the same with two exceptions as at the beginning of the year, and that all have discharged their duties in a commendable manner.

The changes among the nurses, attendants and employes have been many, but the standard of the service has been well maintained.

I acknowledge my gratitude and appreciation to all of whatever rank who have contributed their best efforts for the welfare of the institution.

Finally, I thank each of you for your courteous consideration, your confidence and your valued assistance.

Respectfully submitted,

S. E. SMITH,
Medical Superintendent.

EASTHAVEN,

October 31, 1908.

Report of the
Trustees and Medical Superintendent

OF THE

Northern Hospital for Insane

AT LONGCLIFF, NEAR LOGANSPOUT

FOR THE

YEAR ENDING SEPTEMBER 30, 1908
(Twentieth Year)

To the Governor

INDIANAPOLIS:

WM. R. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING,
1908.

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
December 1, 1908.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 15, 1908.

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

JOHN C. BILLHEIMER,
Auditor of State.

December 16, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 16, 1908.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer December 16, 1908.

HARRY SLOUGH,
Clerk Printing Board.

In Memoriam.

JOSEPH GOODWIN ROGERS, M. D.

Dr. Joseph Goodwin Rogers, the son of Dr. Joseph H. D. Rogers and Abby Goodwin Lane Rogers, of Madison, Indiana, was born November 23, 1841. He received his early education in the public schools, and about the age of eighteen began the study of medicine with his father. In 1863 he attended a course of medical lectures at the Cincinnati College of Medicine, and on March 3, 1864, graduated at Bellevue Medical College, New York City. Returning to Madison, he served as surgeon in the military hospital located there until the close of the Civil War, when he went to Europe, where he spent two years in travel and in the pursuit of his studies in the clinics of Paris and other medical centers. He then returned to Madison and engaged in the practice with his father until 1879. On June 20, 1872, he married Margaret Watson, of Bedford, Pennsylvania. Acting on the advice of Dr. Theophilus Parvin and other friends, he accepted the superintendency of the State Hospital for Insane at Indianapolis in 1879, which position he held until 1883, and later in the same year he was appointed sanitary superintendent of construction for the new state hospitals for insane to be erected at Logansport, Evansville and Richmond. This work he supervised until the completion of these institutions, residing in Logansport in the meantime until May, 1888, when he assumed charge as Superintendent of the Northern Hospital for Insane, which position he held at the time of his death, April 11, 1908, having been employed for a period of almost thirty years in the service of the State. On March 9, 1885, the honorary degree of Doctor of Philosophy was conferred on him by Hanover College. In 1900 he was elected president of the American Medico-Psychological Association. During his term as Superintendent of the Hospital at Indianapolis he was connected with the chair of materia medica and therapeutics of the Medical College of Indiana, and was a frequent contributor to medical literature. In the substantial architecture and durable sanitary construction of Longcliff, the handiwork of Dr. Rogers will endure for years to come as a monument to his genius and his faithfulness to duty. Likewise, as authority on public charitable and correctional endeavor,

he was acknowledged as the foremost in the State, and many of the acts that put our benevolent institutions on the high plane of efficiency they now occupy were placed in our statutes through his counsel and advice. Being a gifted mechanic and architect, as well as a distinguished physician, the plans of the buildings, the arrangement of the appurtenances thereto, the beauty of the grounds, and the system of management of the institution are all largely creations of Dr. Rogers' marvelous mind, as he was as greatly concerned in every detail of Longcliff as though it were his to have and hold forever. It is said of him that he not only had in mind an outline of the characteristics and troubles of the thousand patients in the institution, but he knew most of them personally and could tell their condition at any time with scarcely a reference to his records or his assistant physicians. Also, he was in intelligent touch, always, with details of all proceedings in routine and specific endeavor about the place, and his familiarity with everything from the simplest condition on the farm to the scientific direction of medical skill was an accomplishment that men of all stations in life looked upon with awe and admiration. Dr. Rogers was characteristically a profound student, and in literary and legal lore and in music he was a sunburst of intellectuality that shone with distinguished splendor in any assembly of culture. And above all, his devotion to his home and his parental concern for his family, together with his tireless energy in the discharge of every duty devolving upon him as a leader of righteous citizenship, made for him a name that is a credit to the high estate of a father and an honor to Indiana manhood.

TRIBUTE BY THE BOARD OF TRUSTEES.

For the first time in the history of this institution of mercy and hope for the distressed, the messenger of death has summoned the Superintendent and he has answered the call. That death is no respecter of persons is to us most keenly emphasized as we falter in the gloom it has left throughout the beauty and the life of Longcliff by taking from us the architect, builder and benefactor of this splendid refuge and temporal blessing for unfortunate humanity. We realize that death is always sad and depressing, but it is especially distressing in this instance wherein not only the family and associates have lost an esteemed and beloved one but the pitifully afflicted have lost a great and benevolent physician and the public a matchless servant. Quietly, gently and yet with marvelous diplomacy and fervor, he managed Longcliff affairs until

they became a standard of excellence that restored many a darkened soul into the sunshine of health and happiness, schooled a host of men and women into traits and talents of superior usefulness, and furnished a model in commonwealth medical benevolence that has been copied with marked success in many states of our Union and approved beyond the seas by some of the greatest alienists of the age.

In lines of culture he was a great teacher, and in all things manly and useful, the soul of honor and a genius of activity. No one of whatsoever estate ever went to him in need or trouble that he did not bestow assistance, and none ever came within the atmosphere of his presence that did not go away beneficially impressed by the earnestness and conscientiousness of his personality. He not only gave freely to personal needs, but he shared his bountiful reservoir of knowledge without reserve, and it was his fixed policy to learn from every possible source, however exalted or humble. And more than this, he was a man of whom it is pertinently said: "He loved humanity so well, he literally worked himself to death for its benefit." But greatest of all in his glorious life was his sacred solicitude for Longcliff and the unfortunates within its care and keeping. To him must be given the credit, largely, for the beauty of the grounds, the stability of the improvements, and especially for the system and good name with which Longcliff is blessed. The welfare of this benefaction for the mentally afflicted was his whole ambition, and by his sturdy devotion to duty countless numbers have been relieved from the most terrible of all afflictions and countless others have had the dreadful pathway through the valley to death made less dismal by his sympathy and his skill. Indeed, so alert was he to every trust that no hint of mismanagement ever cast a consistent shadow upon him and no stain of dereliction of duty mars the voluminous pages of his record in a position that is one of the most exacting in the range of public duty.

Therefore, be it resolved by the Board of Trustees of the Northern Indiana Hospital for Insane, That in the death of Dr. Joseph G. Rogers the State has lost a faithful and illustrious public servant, the medical profession has lost one of its most honored and eminent members, his associates have lost a companionable and ever-helpful friend, and that our sympathy is hereby tendered to his family, the members of which are bereft of one of the most devoted and inspiring parental peers that ever blessed a family circle.

And be it further resolved, That this Board hereby acknowledges its profound appreciation of his manifold and gracious services in behalf of the State and of mankind generally, that it sadly bows to the will of "Him who doeth all things well," and that a copy of this inadequate testimonial be tendered to the family of our lamented friend and co-worker, and also spread upon the records of this institution.

Respectfully submitted this 12th day of May, 1908.

CHARLES W. SLICK,
HENRY A. BARNHART,
WARREN T. McCRAY,
WILLIAM A. MORRIS,

Trustees.

REPORT OF BOARD OF TRUSTEES.

HON. J. FRANK HANLY, *Governor of Indiana*:

SIR—In accordance with the law of the State of Indiana, the Board of Trustees of the Northern Hospital for Insane respectfully submits for your consideration the following report, together with that of the Medical Superintendent, with accompanying financial and statistical tables, for the fiscal year ending September 30, 1908.

The personnel of the Board has remained unchanged throughout the year as has also its organization, and all members have, almost without exception, been present at each regular meeting of the Board.

On April 11th the hearts of all friends of the institution were saddened by the death of Dr. Joseph G. Rogers, who was Medical Engineer during construction and Medical Superintendent during the twenty years of the hospital's operation. Although he had been an invalid for more than two years, his death came unexpectedly, and was a great shock to the community and a deplorable loss to the institutional life of the State; a man of broad intellect and resolute determination, but with a heart overflowing with the milk of human kindness and an ever-ready willingness to aid those in distress. His work must of necessity be done by others, but his place can never be filled. The Northern Hospital will remain throughout coming generations a glorious monument to his genius, persistence and indefatigable industry.

On July 17th Dr. Fred W. Terflinger, who has been a member of the hospital staff for six years, two of which he served as senior assistant physician, was chosen to succeed Dr. Rogers as Medical Superintendent. Under his administration the affairs of the hospital have been ably managed, and we have every reason to believe that he will in every way maintain the high standard set by his illustrious predecessor.

During the year special improvements, for which there were specific appropriations, have been completed, notably a root house in which to care for winter vegetables, a water-softening plant and an ice-making plant, all of which are in satisfactory operation. The specific appropriation for the alterations in E and Fifth wards was insufficient to complete the work. New plumbing replaced the old on the lower floors of both wards and necessary plumbing for

the accommodation of patients on the upper floors was also installed, but there was not sufficient funds with which to construct the proposed partitions.

Many minor improvements have been made and the equipment of the various departments is in a good state of repair. Many additional improvements are urgently required, both for the benefit and comfort of the patients, and for economic reasons; and, owing to a sharp advance in the price of all commodities and because the pay of many subordinate employes, especially the pay of attendants, is too small, the per capita rate of maintenance should be increased, and it is the request of this Board that the Governor use his influence with the Legislative Committee to secure for the purpose of maintenance a per capita rate of not less than 50 cents per diem or \$182.50 per annum, which would allow an increase in wages for all whose pay is insufficient, and thus benefit the service inestimably. The tent, which accommodated thirty patients for a period of four years, had to be abandoned last fall, and this spring it was replaced by an inexpensive building constructed of 4x4 upright posts with shiplap siding covered with patent roofing, with a hard pine floor, which building will accommodate and comfortably house thirty patients the year round. The doors at the end of this building are large and arranged on rollers, so that they can be opened wide in summer to allow free ventilation and light, and the building is also provided with eleven windows on each side for the same purpose. During the winter season it will be heated by two ordinary coal stoves. Patients residing here are allowed an unusual amount of freedom, and for this reason it is popular as a place of residence.

In order to maintain the property of the hospital in a desirable state of repair, a larger fund for this purpose will be required. The number of buildings is greater than at any time in the history of the institution and its equipment is proportionately increased, the original buildings require more attention as they grow older, plumbing and painting must be done, and for the purpose of repairs, \$10,000.00, which is approximately two per cent. of the valuation of the property, is asked.

The clothing appropriation for the past year has been sufficient and the same amount per annum will no doubt provide necessary raiment for the next two years.

Subsistence has been plentiful and of good quality.

Very respectfully,

CHAS. W. SLICK,

President.

December 1, 1908.

REPORT OF MEDICAL SUPERINTENDENT.

To the Board of Trustees:

GENTLEMEN—As prescribed by law, I have the honor to report the operations of the Northern Indiana Hospital for Insane for the fiscal year ending September 30, 1908, and its present and future needs as follows:

MEDICAL HISTORY.

MOVEMENT OF POPULATION.

<i>Movement.</i>	<i>Men.</i>	<i>Women.</i>	<i>Total.</i>
Enrolled October 1, 1907.....	494	475	969
Admitted from October 1, 1907, to September 30, 1908	166	107	273
Discharged from October 1, 1907, to September 30, 1908	57	40	97
Recovered	22	18	40
Improved	28	11	39
Unimproved	10	4	14
Not insane	3	1	4
Died	51	41	92
Furloughed	91	61	152
Total enrollment	552	501	1,053
Average number resident.....	482	423	905

Further details of movement and general medical statistics are set forth in an appendix. An analysis of these tables is as follows:

Psychoses of Admitted.—During the fiscal year there were 166 men and 107 women, a total of 273 patients, admitted. Of these 56, 20 per cent, were cases of melancholia, of which 29 were men, 17 per cent of the men admitted; 14 were women, 13 per cent of the women admitted. Thirty-one were cases of paranoia, 11 per cent of all admitted; 17 men, 10 per cent, and 14 women, 13 per cent. Twenty-nine senile dementia, 10 per cent; 19 men, 11 per cent; 10 women, 10 per cent (numerically about twice as many men as women, the excess being dotards, a burden to their friends). Twenty-three general paresis, 8 per cent; all men, 15 per cent. Twenty-three dementia præcox, 8 per cent; 17 men, 10 per cent; 6 women, 6 per cent. Nineteen chronic mania, 7 per cent; 7 men, 4

per cent; 12 women, 12 per cent. Thirteen acute mania, 5 per cent; 8 men, 5 per cent; 5 women, 5 per cent. Nine acute delirium, 3 per cent; 1 man, 1 per cent; 4 women, 4 per cent (2 of the latter being cases of typhoid fever delirium). Four alcoholic insanity, 2 per cent; all men, 2 per cent. Thirteen imbeciles, 5 per cent; 9 men, 6 per cent; 4 women, 4 per cent; twice as many male as female imbeciles received. Twelve epileptic dementia, 6 epileptics, total 18, 7 per cent; 10 men, 6 per cent; 8 women, 8 per cent. Six recurrent mania, 2 per cent. Four manic-depressive, 2 per cent. Five syphilitic insanity, 2 per cent. Three multiple sclerosis, 1 per cent. Three katatonia, 1 per cent. Three paralytic dementia, 1 per cent. Two secondary dementia, 1 per cent. One each of arteriosclerotic insanity, multiple neuritis, moral insanity and organic brain disease, in men; and 1 each of exhaustion delirium and post-infective psychosis, in women.

Duration of Recovered Cases.—Of the cases discharged recovered during the year, 6 were of acute mania, 4 men, 2 women; the duration for men 18 months; for women, 4 years. One of alcoholic delirium, man, duration under 6 months. Twenty-five melancholia, 10 men, 15 women; duration 2 months to 13 years, half recovering under 18 months. Six dementia præcox, 5 men, 1 woman; duration 12 months to 2 years. One post-paralytic dementia, man, four years' duration. Four paranoia, 2 men, 2 women; 18 months to 10 years' duration. One moral insanity, man, 12 months' duration.

Psychoses of Recovered.—During the year 273 patients were received and 44 discharged as recovered, 15 per cent; about 5 per cent of daily average population (905). There were 166 men admitted, 24 discharged, recovered, 14 per cent; 5 per cent of average population of men (482). One hundred and seven women were admitted; 20 discharged, recovered, 19 per cent; 4 per cent of average population of women (423). There were 56 cases of melancholia admitted; 25 discharged, recovered, 43 per cent; 9 per cent of all admitted, 3 per cent of population. Of these, 29 men were discharged; recovered, 10, 34 per cent; 7 per cent of all men admitted, 2 per cent of male population. Women, 27; discharged, recovered, 15, 55 per cent; 14 per cent of women admitted, 3 per cent of female population. Acute mania and allied psychoses, 21 admitted; 6 recovered, 30 per cent; 2 per cent of all admitted, 1 per cent of population. Men, 12 admitted; recovered, 4, 33 per cent; 3 per cent of all men admitted, 2 per cent of male population. Women, 9 admitted; 2 recovered, 45 per cent; 2 per cent

of all women admitted, 2 per cent of female population. Dementia præcox, 23 admitted; 6 recovered, 25 per cent; 2 per cent of all admitted, 1 per cent of population. Men admitted, 17; recovered, 5, 30 per cent; 3 per cent of all men admitted. Women admitted, 6; recovered, 1, 16 per cent; 1 per cent of all women admitted, 0.25 per cent of female population. Paranoia, 31 admitted; 4 recovered, 13 per cent; 2 per cent of all admitted, 0.5 per cent of population. Men, 17 admitted; 2 recovered, 12 per cent; 1 per cent of men admitted, 0.5 per cent of male population. Women, 14 admitted; 2 recovered, 14 per cent; 2 per cent of all women admitted, 0.5 per cent of female population. Acute alcoholic insanity, 4 men admitted; 1 recovered, 25 per cent; 0.4 per cent of all admitted, 0.1 per cent of population. Post-paralytic dementia, 3 men admitted; 1 recovered, 33 per cent. Moral insanity, 1 man admitted, 1 recovered.

Mortality.—Ninety-two died during the year—51 men, 41 women, a mortality rate of 75 per 1,000. Seventeen were cases of general paresis, 19 per cent of all who died; 15 of these were men, 30 per cent of all the men who died, and 2 were women, 5 per cent of the women who died. Sixteen of chronic mania, 17 per cent; 8 men, 16 per cent; 8 women, 19 per cent. Thirteen melancholia, 14 per cent; 5 men, 10 per cent; 8 women, 19 per cent. Twelve senile dementia, 13 per cent; 6 men, 12 per cent; 6 women, 14 per cent. Ten epileptics, 11 per cent; 6 men, 12 per cent; 4 women, 10 per cent. Six acute mania, 7 per cent; 3 men, 6 per cent; 3 women, 7 per cent. Six dementia præcox, 7 per cent; 4 men, 8 per cent; 2 women, 5 per cent. Three paralytic dementia, 3 per cent; 1 man, 2 per cent; 2 women, 5 per cent. Two katatonia, 2 per cent; 1 woman, 2 per cent; 1 woman, 3 per cent. One paranoia, 1 per cent; 1 woman, 3 per cent. One secondary dementia, 1 per cent; 1 woman, 3 per cent. One multiple sclerosis, 1 per cent; 1 man, 2 per cent.

Causes of Death.—Broncho-pneumonia was the cause of death in 11 cases, 12 per cent of all who died; 4 men, 8 per cent; 7 women, 14 per cent. Lobar pneumonia, 4, 4 per cent; men, 3, 6 per cent; women, 1, 2 per cent. General paresis, 11, 11 per cent; men, 9, 18 per cent; women, 2, 5 per cent. Inanition, 6, 6 per cent; men, 5, 10 per cent; women, 1, 2 per cent. Maniacal exhaustion, 5, 5 per cent; men, 3, 6 per cent; women, 2, 5 per cent. Uremia, 5, 5 per cent; men, 3, 6 per cent; women, 2, 5 per cent. Status epilepticus, 4, 4 per cent; men, 2, 4 per cent; women, 2, 5 per cent. Cerebral apoplexy, 6, 6 per cent; men, 2, 4 per cent;

women, 4, 10 per cent. Bulbar apoplexy, 1, 1 per cent; woman, 1 2 per cent. Bulbar paralysis, 3, 3 per cent; men, 3, 6 per cent. Pulmonary tuberculosis, 3, 3 per cent; men, 1, 2 per cent; women, 2, 5 per cent. Fibroid phthisis and miliary tuberculosis, 1 man each. Suicide, 2; 1 man, 1 woman. Fracture of skull, 1—a furloughed man returned in this condition. Septicemia, 3, 3 per cent; men, 2, 4 per cent; women, 1, 2 per cent. Peritonitis, 1 man. Enteritis, 1 man, 1 woman. Typhoid, 2 women, 5 per cent; committed because of the delirium. Chronic nephritis, 2 men, 4 per cent. Senility, 1 woman, 2 per cent. Organic heart disease, 9, 9 per cent; men, 3, 6 per cent; women, 6, 14 per cent. Cardiac paralysis, 1 woman—after ether anesthesia. Cardiac thrombus, 1 woman.

The following clinical notes may be of interest: The most common fracture in the aged is fracture of the femur at its surgical neck. Owing to nutritional changes often it is spontaneous; the patient in attempting to rise or in shuffling across the floor stumbles and falls and is unable to use the limb. Such cases linger for weeks and die with increasing weakness, pallor and dyspnoea. On autopsy the tissues about the injury are found engorged and the veins inflamed. In the right side of the heart and in the pulmonary arteries a firm and sometimes organized white clot is found, which, in certain cases, has been followed down continuously to its origin at the site of the fracture. Many cases of death after fracture of the thigh are due to cardiac thrombus or embolus originating at site of injury.

During the year twenty operations were performed by Dr. Fred W. Terflinger with the assistance of the staff. Fifteen were abdominal sections. In each case the course was without incident and the result satisfactory.

The most approved methods of treatment have been adopted in the care of insane. By the judicious use of the prolonged warm bath, mechanical and chemical restraint has been minimized.

SPECIAL NEEDS.

1. **Laboratory, Mortuary and Dispensary Building.** During its entire existence the hospital has never been equipped with suitable or sufficient laboratory facilities. Laboratory work has been done here, there and everywhere, and, there being no suitable place in which to do pathological and research work, very little has been done. The hospital staff has always been conscientious in making such chemical and microscopical analyses as were absolutely necessary, but they have done this at all times under difficulties and adverse conditions.

The present mortuary is a small brick building with cement floor, equipped with an ordinary wooden cooling box, and only cold water, and the building is heated by a small wood stove. This is the only place in which an autopsy can be held, and, when circumstances necessitate, the autopsy is done standing on a cold cement floor, with only cold water for washing purposes, insufficient heat and poor light. The Assembly Hall has heretofore been used as a lecture room for nurses and attendants. It is impracticable for this purpose. The dispensary, at present situated in the Administration building, is small and cramped, poorly lighted during the day—as the dynamos are not in operation—and, in many respects, the dispensary is poorly located.

For the purpose of erecting a suitable building and providing it with proper equipment for use as laboratories, mortuary, lecture hall and dispensary, and to be located on the present site of the greenhouses, convenient to all departments of the hospital, \$15,000 is asked. This building is a very necessary need, in order to assist the staff in making correct diagnoses and thereby enabling them to scientifically treat the sick and afflicted, and I respectfully urge the appropriation.

2. **Industrial Hall.** All recognized authorities agree that suitable manual employment is a very potent therapeutic measure in the alleviation and cure of mental diseases. At the present time among the population of this hospital there are a great many artisans who will not do common labor—such as shoveling coal or working in the fields—but who would gladly embrace an opportunity to follow their particular vocation. There are printers, shoemakers, carpenters, etc., whose services, aside from the beneficial effect on the mental condition that employment would give, would be of value to the State, but at present there is no place where such industries can be fostered, and I most respectfully urge an appropriation of \$9,000 for the erection of a substantial industrial hall for the accommodation of a sewing, weaving, basket-making and embroidery department, tailor shop, shoe shop, broom factory, etc. At present there are but five patients employed in the sewing room, and, with additional space, at least twenty could be added to this number, proportionately increasing the usefulness of this department.

3. **Telephone System.** The present telephone system, after twenty years of service, is in such a state of repair that the greater part of one man's time is required to keep it in working order, and, at best, it is unreliable and oftentimes gives trouble at critical mo-

ments. The original wiring, in comparison with present methods, was very poorly done. The wires are strung overhead in most instances, and, where they pass through garrets, are nailed to wooden posts with ordinary staples, the insulation is off, and throughout the entire system is rotten. The central switchboard is old style, irreparably worn out and a source of annoyance to the operator. The current is furnished by dry cells, which require frequent renewal and are a constant source of trouble and expense.

For the purpose of installing a new system with suitable storage batteries which can be charged from the dynamo, a complete metallic return copper wire system throughout, modern switchboard of sufficient capacity and all accessories, approximately \$2,500.00 will be necessary.

A reliable telephone system is one of the most necessary equipments about the hospital. Ofttimes a life depends upon the proper working of the telephone, and emergencies could arise which would make it the means of saving property as well.

4. **Cold Store.** The present cold store house was built in 1897, at a cost of \$1,000, for the purpose of storing ice. It was used as an ice house until six years ago, when it was transformed into a cold store and equipped with the necessary brine pipes and apparatus. The building is not well adapted for its present use, not being properly insulated or properly constructed, and at present, after eleven years, the essential timbers have rotted to such a degree that temporary braces and props have been necessary to prevent the ceilings from falling. This building threatens to collapse at any time, and it is now proposed to erect a cold-store house of stone, brick and slate, with modern pressed cork insulation, sufficient room to meet present requirements and future needs, and incorporating the ice-making plant now in operation. Provisional estimates for this purpose approximate \$8,100.

5. **New Plumbing for Old Buildings.** In six of the original buildings, three for men and three for women, the plumbing fixtures originally installed are worn out, unsanitary, unsightly and urgently require replacements and repairs. During the summer of 1908 plumbing on E and 5th wards was completely overhauled, new fixtures put in place and additional fixtures installed. The same process will be required on wards A, B, F, G, H, and I—department for men; and wards 1, 2, 6, 7, 8 and 9—department for women. Some of the soil pipe now in place can be utilized, but it is impossible to say just how much will require replacement by

new. It is therefore impossible to make definite figures, but it is estimated that \$6,441 will do the necessary work and purchase the required pipe and fixtures.

6. **Closet Annexes to Buildings of 1900.** The closets in the buildings of 1900 are located in small, triangular rooms reached by a door from the loggia, and a door from the hall in the south wing, with no outside wall exposure, and consequently no possible means of ventilation. The air from these closets escapes either into the loggia or into the hall and from there to the living room. In the winter time the loggia is closed with glass sash and forms a living room for untidy, decrepit patients. No sunshine can possibly reach these rooms at any time during the day, and, as before stated, the only circulation of air possible is through the day-room or loggia, and as a consequence, fecal and uriniferous odors are unavoidably present in the loggia and dayroom. To overcome this extremely undesirable condition, it will be necessary to erect a detached water-closet tower for each building, two stories high, connected to the main building by a short hall. The detached towers provided the buildings of 1907 having proven satisfactory in all particulars, it is proposed to provide the buildings of 1900 with similar ones. For this purpose and for providing proper fixtures it is estimated that \$6,340 will be necessary.

7. **Hay Fork and Dormer for Horse Stable.** The installation of a hay fork in the horse stable, involving changes in roof construction, will require \$300. At the present time hay must be stored by sheer manual labor, which adds considerably to the purchase price. Lack of funds prevented this necessary equipment originally.

8. **Pickle, Kraut and Tool House.** Pickles and kraut at the present time are stored in a small room in a corner of the old ice houses, which are about to fall down and which have been abandoned for other purposes. These buildings will of necessity be razed during the summer of 1909, and it will then be necessary to provide a house for this purpose. A substantial brick, stone and slate house, 20x40, and embracing also a room for the storage of gardeners' tools during the winter, will cost \$1,550.

9. **Wagon and Implement Shed.** The old wagon shed, in a state of dilapidation, should be replaced by a larger one of stone and slate. For this purpose \$1,500 is asked.

10. **Fire Escapes for Buildings 5, 11, and E, and Fire Walls for the Rear Center Building.** The upper floors of buildings 5, 11 and E are reached by a single stairway, and in case of fire this

stairway is the only possible means of exit. These stairways are constructed of brick and slate and are fire-proof, but should fire originate in such manner as to prevent escape down these stairways, the only other method of escape would be by jumping from the second-story windows. On 5th and E wards the windows cannot be raised more than six inches without the removal of blocks above and below the sash, and on the 11th ward the windows are protected by wire guards. The removal of these blocks and guards would require considerable time, and after removal, escape by the windows would mean broken bones, serious injury and possible loss of life. In order to insure the safety of occupants of these three buildings, it will be necessary to erect a fire-escape for each, and the all-metal-spiral Kirker-Bender fire-escape, manufactured by the Dow Wire and Iron Works, is recommended. For this purpose \$1,847 is asked.

The rear center attic is unprotected by fire walls and should fire originate or find its way into this attic, it would be impossible to prevent it spreading throughout the entire building. The necessity for this improvement is apparent and its estimated cost is \$628.

11. **Roof for Reservoir.** The reservoir was originally covered with a tin roof supported by wooden beams and rafters which have, after five years, rotted to such a degree that the entire roof threatens to collapse at any time. The tin is in good condition and would last for many years, but it is thought necessary, because of the weakened and uncertain condition of the wood work below, to replace the entire roof with iron and cement, making an indestructible covering for the reservoir. For this purpose, it is estimated that \$2,000 will be required.

12. **Vacuum Heating System.** At the present time the original heating system does not render efficient and faultless service owing to the long distance necessary to carry steam to reach outlying buildings. Air and water accumulate in the steam and return pipes and often prevent a free circulation of steam, and as a consequence the system is unreliable and troublesome. Within recent years there has been perfected what is known as the vacuum heating system, the essentials of which consist of a pump attached to return pipes for the purpose of removing air from the entire system and allowing a perfectly free circulation of steam at all times, and certain specially constructed valves and fittings for the purpose of draining and clearing the mains and radiators of oil and debris. This system is in successful operation at the Southern

and Eastern Indiana Hospitals and is being installed in the new Southeastern Hospital at Madison. It has proven to be economical and highly satisfactory where tried, and would make our present system as nearly perfect as it is possible for an old system to be. For this purpose it is estimated that \$11,000 will be required.

13. **Administration Hall Floor.** The floor in the Administration Hall is in bad repair and requires renewal. The present floor is of hard wood, was poorly laid originally and, after twenty years, the boards have warped and shrunken, leaving unsightly cracks and an uneven surface which can not be kept in proper condition. This being the most public place in the institution the sum of \$1,782.30 is asked for the purpose of laying a floor of rubber tiling, which is noiseless, non-slippery, thoroughly sanitary and beautiful in appearance, easily repaired and durable. The dignity of the State demands this highly necessary improvement.

14. **Additional Farm Land.** The hospital land at present embraces two hundred and ninety-three acres and of these less than one hundred are tillable, fifty-four are devoted to vegetable garden and about forty acres to the cultivation of corn and potatoes. The acreage of farm land is so small that sufficient corn for ensilage can not be raised because of inability to rotate crops. This year it was necessary to purchase two and a half acres of corn in order to store sufficient ensilage for the winter. Adjoining the hospital grounds on the east is a forty-acre tract, somewhat stony and broken, but desirable for grazing purposes; and on the south, separated from the hospital by a public highway, is another large tract of excellent farm land. The forty-acre tract could probably be purchased for \$200 an acre. On this tract of land there is a small cottage, with outbuildings, which would be a desirable residence for some one in sympathy with the institution—the farmer or dairyman, for instance. There is also a cottage with good outbuildings on the tract south. What price would be necessary to secure the south tract is not known, and it might be necessary to institute condemnation proceedings, but an appropriation of \$38,000 is recommended for the purchase of one hundred and ninety acres of additional farm land—forty adjoining on the east and one hundred and fifty on the south. This additional land would enable us to raise all our stable provender and furnish valuable employment to a large number of patients. It seems unnecessary to enlarge upon the desirability and necessity of this improvement.

16. **Green Houses.** Two of the present greenhouse buildings are in such a state of decay that they will soon require replacement. One of the houses is comparatively new, having been built two years ago. But these houses are all situated on the site which we desire to use for laboratory, mortuary and dispensary building. This is not a suitable place for greenhouses, being too near the main group of buildings. The propagation of plants and flowers for lawn and ward decoration and the necessity for providing a suitable house for winter storage of palms and shrubs make it necessary to enlarge our present facilities. To provide for present and future needs, three houses 100 feet long will be necessary. The material used in the construction of the last house, the heating apparatus and all the glass in present use can be utilized, and \$5,200 will be required to transfer and build, on a proper site, the necessary houses.

15. **Engine, Generator and Motors.** The present lighting system consists of: 1 40-kilowatt dynamo, capacity 620 lamps, directly connected to 1 60-horsepower steam engine; 1 dynamo, 22-kilowatt capacity, 400 lamps, with belt connection to 1 50-horsepower steam engine. The capacity of the two machines is 1,020 lights, and there are at present connected with the system which these two dynamos must supply, 1,433. Since the installation of the system the hospital has increased in size, new buildings have been erected, new lamps added until the dynamos are unable to supply all the lamps at any one time. In buildings separated from the power plant, where power is required, steam engines are in use and this necessitates the carrying of high pressure steam through pipes to the engine. It is now proposed to substitute for the small 22 kilowatt dynamo and 50 horsepower engine, a 100 kilowatt modern generator, with 150 horsepower Corliss engine, retaining the 40 kilowatt generator and the 60 horsepower engine for emergencies and accessory power. This equipment will supply sufficient energy for all lighting and power purposes with a comfortable margin, and would do away with the expensive transmission of steam through underground pipes, as individual electric motors could be installed throughout the institution where needed. The institution has entirely outgrown the power plant, and for this very necessary improvement \$7,215 will be required.

GENERAL CURRENT NEEDS.

General Maintenance. Owing to a sharp advance in the price of supplies the maintenance fund for the past two years has been insufficient to provide more than the bare necessities. The pay of

attendants is insufficient and out of all proportion to the service required of them. In order to advance the wages to what they should be and to satisfactorily meet our responsibilities and provide the proper subsistence, an increase in the per capita maintenance is necessary and just. A per capita allowance of \$182.50 per annum or 50 cents per diem it is estimated will be sufficient for the next biennial period, and the following definite sums are required:

For maintenance, \$164,250, with \$182.50 per capita per annum for any excess over 900 inmates.

For clothing, \$6,500.

For repairs, \$10,000.

RECAPITULATION OF NEEDS.

Regular.

Maintenance	\$164,250 00
Clothing	6,500 00
Repairs	10,000 00

Specific.

Engine, generator and motors.....	7,215 00

Hospital Staff. Following the death of Superintendent, Dr. Joseph G. Rogers, on April 11, 1908, and the appointment of Dr. Fred W. Terflinger as Acting Superintendent, Dr. Mary L. Widdop, class of 1902, Indiana Medical College, was appointed junior assistant physician and after three months' service was promoted to the position of assistant physician and assigned a division in the department for women. Dr. Widdop is especially fitted for institution work, having served three years as physician in the State Soldiers' Home at Lafayette.

The entire medical staff has, without exception, been careful, conscientious and untiring in their efforts to minister to those in their care, and had I not been fully cognizant of the sterling qualities of each individual member, I could not have assumed the duties and responsibilities which my appointment involved.

The Superintendent and staff are indebted to Dr. A. C. Bartholomew, laryngologist, otologist and ophthalmologist, for many valuable consultations and operations in his specialty.

Special Improvements. During the year special improvements from specific appropriations authorized by the last legislature, were completed as follows:

Alterations to 5th and E wards: On the lower floors of E and 5th wards new plumbing has replaced the old throughout and on the upper floors additional plumbing and fixtures have been installed. The new fixtures are all of the latest improved sanitary type and provide accommodation for about eighty patients—forty on the lower and 40 on the upper floor of each building. It was the intention originally to convert these buildings into two wards each, one on the lower and one on the upper floor, but to do this a north and south partition through the dayroom below and the dormitory above is necessary, and the appropriation for this purpose was exhausted by the installation of the necessary plumbing fixtures. However, the additional cost will be small and can without doubt be done during the coming summer without an additional appropriation. When completed, each building will consist of two wards, each ward with a capacity of forty patients, which will be a better arrangement and insure more individual attention than at present is possible with so many patients congregated on a single ward. It is highly essential that each of these buildings be provided with a fire-escape, as there is but a single stairway leading from the upper to the lower floor, and for this purpose an appropriation is asked.

Root House. A root house, 26x60x13, constructed of brick, stone, slate and cement and according to latest improved methods, properly insulated by a four-inch dead air space in the outside walls and insulating paper on the inside, with proper size wooden bins and stalls, to insure against freezing and dry rot, is complete and in use. The wooden building formerly used for this purpose is in a state of dilapidation and will of necessity be torn down next summer.

Water Softener. The water-softening plant, authorized by the general assembly of 1907, is complete and has been in satisfac-

tory operation since January, 1908. It consists of a type B Ken-nicott machine, complete, with a storage tank and apparatus for mixing and elevating the chemicals. It has a capacity of 5,000 gallons per hour and provides soft water for boilers, laundry and all domestic uses.

Extension of Refrigerating System. The ice-making plant is complete and has been in satisfactory operation during the summer of 1908, providing a bountiful supply of clean, pure ice for the entire hospital. The project of extending brine pipes for refrigerating purposes to the Administration kitchen was abandoned as impracticable. Ice will be used for this purpose as heretofore.

The general assembly of 1909 is asked to authorize an appropriation for the purpose of constructing and equipping a new cold store house to replace the wooden one now in a state of decay and about to collapse, and it is intended that this building shall incorporate the present ice-making plant and apparatus, combining all refrigerating and ice-making operations to one building, which will be located in close proximity to the boiler house and circulating pumps.

Occupation and Amusements. Special effort has been made during the summer to provide an abundance of occupation and amusement for all patients. To this end, Mrs. Josie Vawter was sent to Chicago for a four weeks' course for institution attendants given by the Chicago School of Civics and Philanthropy. In this school she was taught practical basket-making and weaving, games, dances and amusements of all sorts, which can be practically used among the insane. During the summer a daily school under the direction of Mrs. Vawter has been maintained in the Assembly Hall, to which each assistant physician assigned such patients as he considered could be benefited by light occupation such as the school provides. Remarkable results have been obtained in a number of cases, which indicates the wisdom of the Board in authorizing this measure.

An industrial hall, in which not only this branch of industry, but many others can be fostered, is a highly desirable improvement, for which an appropriation is asked of the coming legislature.

In addition to these industrial departments outdoor games and sports have been encouraged. Baseball, basket ball, field meets, athletic events, picnics, etc., have assisted in breaking the monotony of hospital routine, and rides about the country in the wagonet purchased by the Board for this purpose has provided diversion

for all patients. July 4 was properly celebrated by a band concert and a field meet in the morning, in the afternoon a baseball game, and fireworks at night. On August 4, three hundred and ninety-one patients attended Ringling Bros. circus in Logansport, transportation being furnished by a special train over the Vandalia.

In this connection I desire to publicly express my thanks to Mr. Tom Hardy, manager of the Crystal Theater, for a standing invitation to patients in this institution to visit that theater at any time gratis; and to the Elks Band for two delightful outdoor concerts; and to any and all others who have assisted the management in any way or contributed in any manner to the entertainment of patients. Thanks are particularly due various friends of the institution for large contributions of magazine and other literature. Numerous copies of current magazines are regularly received and distributed throughout the wards and daily newspapers are received from various sources gratis.

In conclusion, I would extend to your honorable board my heartfelt thanks for the confidence reposed in me as indicated by your choice of Superintendent to succeed the lamented Dr. Rogers, and I would also extend thanks to all officers and employes who have faithfully and loyally discharged their duties during the year.

Very respectfully,

FRED W. TERFLINGER,
Medical Superintendent.

REV. PAUL PFEIFFER.

REPORT OF BOARD OF TRUSTEES.

To His Excellency, J. FRANK HANLY, Governor of Indiana:

Sir—As required by law, we, the Trustees of the Southern Indiana Hospital for the Insane, submit to you the tenth biennial report of the institution, respectfully referring you for details to the report of the Medical Superintendent.

By an act of the General Assembly of 1907, approved March 2, 1907, governing Boards of Trustees for State Institutions, it was enacted that "One additional trustee shall be appointed by the governor to each of said boards as the same are now constituted."

In accordance with this act William S. Bogey of Bloomfield, Indiana, was appointed a member of the board. The term of Samuel H. Wulfman having expired, Bird H. Davis of Newport, Indiana, was appointed his successor.

Both appointees presented their credentials on May the 14th, 1907, and the following organization was effected:

John T. Stout, President.
Fred. F. Bays, Vice-President.
William S. Bogey, Treasurer.
Bird H. Davis, Secretary.

The term of Fred. F. Bays expired January 1, 1908, and, being re-appointed, the organization continues the same.

The appropriations for the period, maintenance, repairs, clothing and for specific purposes, have been expended for the purpose for which they were made.

A carefully detailed account of the expenditures of these funds is set forth in the report of the Medical Superintendent herewith submitted.

The appropriation for maintenance for the fiscal year, 1906-1907, was \$95,287.50; maintenance per capita, \$4,155.66, making an available total of \$99,443.16. The amount expended (during the eleven months) was \$98,831.08, returning to State Treasury \$612.08.

The average number of patients daily was 655.335.

The gross per capita for the eleven months being \$164.77.

For the fiscal year 1907-1908: maintenance available, \$109,273.89; expended, \$106,827.39; returned to State Treasury, \$2,446.30.

The average number of patients daily was 662.690.

The gross per capita, \$177.04.

The total amount returned to State Treasury from all funds during the period was:

1906-1907 (11 months).

From—

Maintenance	\$612 08
Repairs	1 93
Clothing	9 68

Specific.

Rebuilding of laundry	204 13
Total	\$827 82

1907-1908.

From—

Maintenance	\$2,446 30
Repairs	43
Clothing	21

Specific.

Boilers and equipment	4 22
Sewage plant	1,960 09
Congregate dining rooms	78 00
Bakery equipment	39 00

Total\$4,528 25

Total returned to State Treasury from all funds.....\$5,356 07

Notwithstanding this strict economy, a continuous effort was put forth and untiring vigilance was exercised to obtain the best supplies, buildings and equipment in order to insure the welfare of our population.

IMPROVEMENTS.

During the period many major and also many minor improvements have been made, all of which are mentioned in detail in the report of the Medical Superintendent.

LAUNDRY.

On February 1, 1907, the institution suffered the loss of laundry by fire, which originated in the dryroom.

The necessity of immediate rebuilding and equipping was urged, and was apparent to the legislature then in session, and the sum of \$12,000 was appropriated and made available at once, which enabled us to advertise for bids for construction of same the following month and award the contract. The building was completed, equipped and ready for operation on September 1, 1907.

We call special attention to the description of the dryroom given in the report of the Medical Superintendent.

CONGREGATE DINING ROOMS.

With the sum of \$40,000 appropriated for this purpose, two dining-rooms were constructed for use of patients.

This arrangement will not only facilitate better distribution of the food, but will also be a means of economy—and by converting the ward dining-rooms into dormitories will increase the capacity.

We estimate that this will be one hundred beds; making the total capacity of the institution 764.

BOILERS AND EQUIPMENT.

The old boiler plant was totally inadequate. With the sum appropriated, \$31,500, the following was installed:

- 3 Parker Boilers—300 h. p. each.
- 3 Chain Grate Stokers.
- 1 Radial Brick Chimney.
- 1 Feed Water Heater.
- 2 Hot Water Feed Pumps.
- 1 Cold Water Feed Pump.
- 1 Air Compressor.
- 1 Coal Crushing and Conveying Machine, arranged to carry coal from cars to boiler-room or storage bin.

SEWAGE DISPOSAL PLANT.

For this purpose the sum of \$13,500 was appropriated, and the septic tank method of disposal was adopted.

BAKERY EQUIPMENT.

The bakery equipment was purchased with the appropriation of \$1,000.

RECOMMENDATIONS.

In a letter from Mr. W. E. Blakely, State Factory Inspector, addressed to Dr. C. E. Laughlin, Medical Superintendent of the Southern Indiana Hospital for the Insane, he ordered that certain fire-escapes be erected to said institution.

No funds are available for this purpose, and if they are provided it will require a specific appropriation.

We estimate that the sum of \$3,000 will be required for this purpose.

APPROPRIATIONS.

For 1909-1910—

Maintenance	\$109,395 00
Clothing	4,500 00
Repairs	6,000 00
\$160 per capita per annum for each patient present in excess of 663.	

For 1910-1911—

Maintenance	\$109,395 00
Clothing	4,500 00
Repairs	6,000 00
\$160 per capita per annum for each patient present in excess of 663.	

Specific—

Wells and pumps	\$5,000 00
Hospital for the sick	60,000 00
Land and dairy	30,000 00
Fire-escapes	3,000 00

CONCLUSION.

Continued intimate association more fully impresses us with the administrative capacity of the Medical Superintendent, Dr. C. E. Laughlin. Of the strictest probity, comprehending and anticipat-

ing every requirement, he is possessed of an ample fund of diversified information and sound judgment and in every respect equipped for the manifold duties of his office.

It is gratifying to report that the condition of the Southern Hospital is excellent in all respects.

Respectfully submitted,

JOHN T. STOUT,
FRED F. BAYS,
W. S. BOGY,
BIRD H. DAVIS,
Board of Trustees.

EVANSVILLE, INDIANA, December 15, 1908.

REPORT OF THE MEDICAL SUPERINTENDENT.

To the Board of Trustees:

Gentlemen—I submit herewith the report of the operation of the Southern Indiana Hospital for the Insane for the period ending September 30, 1908:

MOVEMENT OF PATIENTS.

	Men.	Women.	Total.
Enrolled September 30, 1907.....	361	340	701
Admitted during 1907-1908.....	93	73	166
	<hr/>	<hr/>	<hr/>
Total number treated	454	413	867
Discharged—			
Recovered	9	21	30
Improved	19	14	33
Unimproved	10	5	15
Feeble-minded	1	..	1
	<hr/>	<hr/>	<hr/>
	39	40	79
Died	40	27	67
	<hr/>	<hr/>	<hr/>
Total discharged and died	79	67	146
Remaining September 30, 1908.....	375	346	721
Daily average for the year.....	344.644	318.046	662.690
Per cent. of recoveries on admission.....			.18
Per cent. of recoveries on total number treated.....			.035
Per cent. of deaths on total number treated.....			.077

The medical history has been uneventful, and nothing has transpired requiring special comment.

No epidemic disease has prevailed during the period, and no serious or grave accidents have occurred.

The tables appended to this report contain all the data of special interest to the statistician.

The daily average number present during the year was 662.690.

The total enrollment at the close of the year is 721.

In tracing the history of one patient committed from Orange county we learned that she was an *alien*, and immediately applied to the Department of Commerce and Labor for her deportation which was effected on August 4, 1908.

OCCUPATION.

We find the patients are in every respect more healthful and better contented when engaged in some congenial employment and have found it an easy matter to enlist them in various kinds of useful labor such as tilling the farm, cultivating the flowers and vegetables, caring for the lawns, working in the laundry and other departments.

During the year just closed there were employed out of hall a daily average of 100 patients, employed on halls a daily average of 170 patients; making a total daily average of 270 or more than 40 per cent. of our patients engaged in some useful form of employment.

AMUSEMENTS.

We have continued the practice of providing amusements in as many instances and varied forms as our resources permit.

Large numbers of patients are sent to the circus and menageries and to vaudeville shows as occasion permits.

The patients are all urged to participate in the observance of the national holidays and other festal occasions, and with band concerts, socials and weekly dances their otherwise monotonous existence is varied agreeably.

We would respectfully urge that a specific appropriation be made for the purpose of providing various forms of amusements.

On the evening of July 14th the Evansville Musicians' Association gave for the patients a band concert which was duly appreciated.

CHAPEL SERVICES.

A Sunday school is maintained for the patients, in which, under the direction of a superintendent, the patients are the active participants.

The average enrollment is 200 and the patients manifest great interest in the school.

The chaplain conducts a divine service for the patients on each Sunday.

IMPROVEMENTS.

Laundry.—The laundry having been destroyed by fire on February 1, 1907, the General Assembly, being then in session, passed a special act, approved February 13th, making an emergency appropriation of \$12,000 to rebuild and equip same.

On March 12th bids were opened and contract awarded to Scarborough-Davis Co. to rebuild the laundry on old foundation for \$8,900.

With slight modification the building is a duplicate of the former one, being a one-story brick structure 52 by 145 feet and of attractive design.

The distinctive feature of the interior construction is the drying room of our own design.

This is enclosed on three sides with a twelve-inch brick fire wall, the roof being arched and the arches covered with a layer of two feet of concrete. The front consists of heavy fire doors which are operated by weights and pulleys, which are connected by fusible links so that in case of fire the doors would close automatically.

Opening from the roof of this room is an air shaft four feet in diameter, of brick and hollow walls, affording proper draught and ventilation.

Each of the four compartments of the dry room is equipped with a direct connected motor-driven fan, the air currents from which find exit *via* this shaft.

The drying cabinets proper are built within this structure and we trust the precaution exercised will at least assure us of diminished risk from this most frequent source of laundry fires.

The equipment of the laundry now consists of six washers, three extractors, one starcher, one wringer, one body ironer and one combined ironer—all of which are operated by the same motor-driven line-shaft.

One direct connected motor-driven Hercules No. 11 one hundred-inch mangle.

One circular ironing table, equipped with twelve electric hand irons.

One Kinyoun-Francis sterilizer, combining the forces of vacuum, live steam and formaldehyde gas as sterilizing agents.

Every effort was made to hasten the completion of this building because of the heavy draft on the maintenance fund to have our work done by the custom laundry, the best rate we could obtain being \$150 per week for only the rough dry and flat work. During the fiscal year the average weekly operating expense, exclusive of power, has been \$46.39.

With this equipment the foreman with two helpers aided by the patients readily performs the laundry work for the eight hundred population.

The disbursement of this fund is set forth in the proper table under specific funds.

DINING ROOMS.

The sixty-fifth assembly appropriated \$40,000 for two congregate dining rooms. As you are aware differences of opinion as to the proper location and other causes delayed the inception of work on these structures until in May, 1908. After being duly advertised and bids submitted by a number of contractors on May 11th the proposal of Christ. Kanzler and Son was accepted as the lowest and best bid, the price agreed upon being \$39,000, exclusive of heating and electric wiring. The contractors agreed to complete the buildings by September first and fulfilled their agreement. The plans and specifications were drawn by F. J. Schlotter, architect.

The buildings extend as wings from either side of north wing of main building, being immediately connected at one end with that portion used as a general kitchen and at opposite end connected to ward buildings by a colonnade.

These are each two-story buildings constructed of brick and trimmed with stone.

The first floor in each will be used as patients dining-rooms. These rooms are 46 by 80 feet with 14 feet ceiling. The connecting sculleries are 12 by 24 feet. The walls are plastered and painted; doors, casings and ceilings are finished in oak. The floors are of hexagon ceramic tile.

The windows have Luxfer prism transoms to increase light and ventilation.

The second floor of west buildings is divided into an employes dining room 46 by 46 feet, and six living rooms. The second floor of east building is divided into large and airy sewing rooms and dining rooms for officers.

The partitions and ceilings are of re-inforced steel lath and hard plaster. The floors of second story are of hard wood and varnished. All casings and doors are of oak.

The appropriation was insufficient to have included in the contract the wiring for electric lights and the heating equipment. As the subsequent installation of this equipment would have resulted in disfiguring the buildings and involved additional cost, the matter was submitted to Governor Hanly and he directed that this portion of the work should proceed, generously supplying the deficiency from the Governor's Emergency Contingent Fund. The cost of this equipment was \$2,297.

We are now engaged in building tables for the patients' dining rooms. These tables are built of two-inch iron pipe with 3 by 4 inch angle iron frame on which rests a marble slab 3 feet 2 inches by 8 feet and $1\frac{1}{2}$ inch thick.

We regard this as the most sanitary table that can be devised.

Each dining room is lighted by twenty-one Tungsten lamps 100 watt with holophane shade.

The disbursement of this fund is set forth in the proper table under specific funds.

BOILERS AND EQUIPMENT.

The appropriation of \$31,500 for boilers and equipment was not available until October 1, 1907; but the condition of the old plant was so unsatisfactory that it was decided to attempt to complete the work of dismantling the old and installing the new boilers at once.

An exhaustive investigation of the relative merits of different types of boilers was instituted and proposals were submitted by the builders of a number of the best types of steam generators and on April 22, 1907, contract was made with the Parker Boiler Company of Philadelphia to erect three boilers of 300-horsepower each. On May 14th contract was made with the Green Engineering Co., of Chicago, to build Green traveling link grates for these boilers; each grate 7 feet 6 inches wide and each to have 67.5 square feet of active surface.

On the same date contract was made with the Alphons Custodis Chimney Construction Co., to build a chimney 6 feet 6 inches inside diameter and 147 feet 7 inches in height—of radial brick and in accordance with specifications supplied by us.

The chimney is protected by the Ajax system of lightning protection.

Laidlow-Dunn-Gordon Co., were awarded the contract for pumps.

All these contracts were made subject to the terms of the appropriation; work to proceed at once and payment to be made as funds became available.

For the work of dismantling old plant and building foundations for new boilers we had to rely on our own force.

The old boilers were located in an excavation twelve feet in depth and we decided to place the new boilers on ground level and the concrete foundations were built to occupy this space. A foundation of T-iron was laid under concrete to reinforce base of foundations.

The work progressed without interruption until completed, although great inconvenience was experienced because of the curtailment of steam for all purposes.

The floor on ground level is of steel and concrete construction.

The entire plant was completed ready for service on January 1, 1908. The equipment now consists of:

Three 300 h. p. boilers.

Three chain grate stockers.

One radial brick chimney.

One feed water heater.

Two hot water feed pumps.

One cold water feed pump.

One air compressor.

Coal crushing and conveying machinery arranged to carry coal from cars to boiler-room or storage bin.

The plant in all respects is satisfactory and meets the highest expectations. In increased efficiency as well as in economy of operation the change is notable.

For the nine months during which the plant has been in operation the expenditure for fuel is \$3,808.96—while the old plant during the corresponding months of previous year consumed in fuel \$5,338.13. The disbursement of this fund is set forth in the proper table under specific funds.

SEWAGE DISPOSAL PLANT.

The sewage disposal problem has been one perennial vexation throughout the history of this institution. We trust the problem has been satisfactorily solved in accordance with the most advanced scientific methods.

Those portions of the old chemical disposal plant which could be utilized, such as collecting basins and filter beds have been extended and remodeled so as to incorporate and make them component parts of the new plant.

The plan adopted is the septic method of disposal, or consumption by bacterial action. The plant consists:

First, of excavated area 40 by 90 feet 10 feet deep enclosed by concrete walls and divided into four compartments by partitions of concrete, forming the collecting tanks or chambers. These compartments are connected throughout by a series of siphons and valves to control their operation, and are covered by a slate roof.

Second, another excavated area 16.5 feet by 46.5 feet, 6 feet deep, concrete walled and slate covered, divided into two compartments—the first of which is filled with broken stone and forms the contact bed—this is connected by siphons with the second compartment which constitutes the siphon chamber proper, in which are located four siphon devices which are operated in automatic alternation when a given amount of liquid has collected in the chamber, the contents being discharged on the corresponding filter unit.

Third, a series of four filter units corresponding to the automatic siphons above referred to and occupying a lower level than the siphon chamber. The average size of filter units is 80 by 80 feet.

These filter beds are walled with concrete and have an average depth of about 6 feet. On the ground surface are laid a series of farm tile to lead the filtered liquid to collecting wells—then covering this tile is a layer of broken stone 6 inches in depth, on this a layer of gravel 16 inches thick, and covering this, 24 inches of coarse sand. The fluid is distributed over these beds by lead troughs connected with the sewer tile opening from the siphon chamber.

The connecting well of each filter is connected by a sewer with the drainage canal. The operation in brief is as follows:

The sewage flows into a collecting chamber where it is attacked by the colony of bacteria and the process continues as the sewage flows by siphons through the series of basins until the action results in a homogeneous liquefied residuum which is conducted by siphon to the anaerobic filter through which it passes into the siphon chamber proper, from whence it is discharged as a milky fluid on the filter beds, and when it has passed through these is discharged at the outlet as a clear, limpid, sparkling water which flows out through the drainage canal to Pigeon Creek.

Professor R. L. Sackett, C. E., was the consulting engineer.

Scarborough-Davies Co. were the contractors.

This plant was completed and installed December 1, 1907, and has been in successful operation since that time almost a year, operating entirely automatically and has required no maintenance expenditure.

The maintenance expense required to operate the old plant was near \$1,000 per annum.

The disbursement of this fund is shown under specific funds.

BAKERY EQUIPMENT.

A direct-connected motor driven Thompson Moulding Machine for two-pound loaves has been installed.

A two-barrel New Era Mixer, direct connected motor driven machine has been added also.

With this machine two barrels of flour can be mixed and worked in ten minutes' time. We have also imposed some extra work on this machine such as mixing dressing and mashing potatoes.

Two steel dough troughs were purchased.

A marble table 4 by 6 feet, with iron frame, was built for bakery and serves all desired purposes.

The disbursement of this fund is set forth in the proper table under specific funds.

MINOR IMPROVEMENTS.

During the interval since our last report many minor improvements have been made, some of which may be noted.

The vineyard and blackberry patch on east side of grounds, which always presented an unsightly appearance, have been removed and the old blackberry field has been set in timothy meadow. The old vineyard has been seeded with blue grass and planted with beech trees.

The field near railroad, formerly used as a piggery, has been prepared and planted with one thousand peach trees of choice varieties.

The roadway on east side of grounds has been improved and built up with building debris and cinders.

The old bricks left from the demolition and changes in old buildings have been utilized for various purposes, a portion of them served for making a floor in the barn.

With some of this material a four-foot wall has been built around and screens the cinder and garbage yard.

A porch 12 feet by 40 feet, with concrete floor and with protecting roof and guard rail has been built on north side of the general kitchen and new windows affording better light and ventilation have been added.

Seven gables on the old ward building have been in great part rebuilt.

New sod has been placed about laundry, bakery and engine house.

A brass guard rail and screen guard for fly-wheel on engine have been purchased.

Copper wire screens have been placed on doors and windows of the kitchen.

One hundred additional iron beds have been purchased for the wards.

We have utilized some of the bricks taken from the old bakery and officers' kitchen buildings, when they were razed, to construct what may be designated as a:

Sanitary home for hogs—This consists of an enclosure 75 by 78 feet walled with brick and with concrete floor throughout the entire extent.

This space is subdivided by brick partitions to form three compartments.

One compartment 28 by 52 feet serves as a *buffet*.

In the second compartment 17 feet by 28 feet the floor is depressed sufficiently to form a basin for a *lavatory* or natatorium. The water supply pipe enters through the center of this basin floor and has a fitting to which may be attached a revolving lawn sprinkler, thus supplying the water in such manner that they can enjoy the luxury of a fountain shower bath.

The remaining compartment 50 feet by 75 feet has extending through the central portion a pavilion of arcade design 20 by 40 feet which affords protection from the extreme cold and heat, while the surrounding court forms an excellent solarium.

All compartments have sewer connections and we trust that we may avoid the noisome and disagreeable odors that emanated from the old pig pens.

At this writing this pen is inhabited by 150 thrifty and contented hogs, and we anticipate good results from this care, and trust it will not prove an instance of "Casting pearls before swine"; but—"Pigs is pigs."

NEEDS OF THE INSTITUTION.

Hospital.—In the ninth biennial report we suggested that provision should be made for an infirmary and we now urge with more emphasis this measure.

This should be made in fact, as in name, a hospital, where every facility for the most advanced modern methods of approved merit may be found available for the wards placed in our care.

At present the accomodations are not satisfactory for the care of ordinary physical ailments.

The sum of sixty thousand dollars would be sufficient to build a hospital of sixty beds.

Land and Dairy.—We have previously recommended that more land should be secured and stocked with a dairy herd. A tract should be secured in proximity to the institution in order to facilitate supervision and the employment of available labor.

In 1904 an option was secured on a desirable tract at \$100 per acre.

In 1906 an option was secured on same tract at \$125 per acre. In each instance this land sold, at expiration of option, for the price asked and is now owned by persons who do not desire to sell.

We have estimated that thirty thousand dollars will suffice for the purpose desired.

Pumps and Wells.—There is urgent and emergent need for an appropriation for new pumps and wells and this fund should be made available for immediate use.

The pumps in service have now been in use at least the period of ordinary endurance-expectation, and during recent years extraordinary service has been imposed on them and they require frequent repairs. The builder of the pumps and wells warns us that we can not longer expect efficient service from either, and estimates that five thousand dollars will be required to supply this need.

Repairs.—The older buildings begin to show decadence sometimes in unexpected places, and it is necessary that funds should at all times be available in order that prompt attention may be given these defects as they become evident.

The sum of six thousand dollars has thus far been ample for this purpose.

Clothing.—In a former report I have recommended an appropriation for clothing for the entire patient population, stating that, "after patients have been in the Hospital for some years, relatives in many instances relax their interest and become negligent and indifferent about supplying the necessary clothing and often the delay is very embarrassing."

Subsequent experience more fully confirms this opinion.

The sum appropriated was sufficient for the County supply patients.

SUMMARY OF NEEDS.

Appropriations.

For 1909-1910—

Maintenance	\$109,395 00
Clothing	4,500 00
Repairs	6,000 00

\$160 per capita per annum for each patient present in excess of 663.

For 1910-1911—

Maintenance	\$109,395 00
Clothing	4,500 00
Repairs	6,000 00

\$160 per capita per annum for each patient present in excess of 663.

Specific—

Wells and pumps	\$5,000 00
Hospital for the sick	60,000 00
Land and dairy	30,000 00
Fire escape	3,000 00

Gentlemen of the Board of Trustees:

It is gratifying to testify to the active interest and solicitude you have at all times manifested in the general welfare and up-building of the institution.

Complete harmony has at all times been a manifest and dominant feature of your meetings, and the unanimity of your support has been an inspiration to greater effort and an incentive to strive more fully to merit your confidence.

Respectfully submitted,

C. E. LAUGHLIN,
Medical Superintendent.

November 20, 1908.

SIXTIETH ANNUAL REPORT

OF THE

Board of Trustees and Superintendent

OF THE

CENTRAL INDIANA HOSPITAL
FOR INSANE

At Indianapolis, Ind.

FOR THE

Fiscal Year Ending September 30, 1908

TO THE GOVERNOR

INDIANAPOLIS:

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING

1909

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
INDIANAPOLIS, January 2, 1909.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF THE AUDITOR OF STATE,
INDIANAPOLIS, January 11, 1909.

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

JOHN C. BILLHEIMER,
Auditor of State.

INDIANAPOLIS, January 12, 1909.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

MARK THISTLETHWAITE,
Secretary to the Governor.

Filed in the office of Secretary of State of the State of Indiana, January 12, 1909.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer January 12, 1909.

E. O. THOMPSON,
Assistant Clerk Printing Board.

OFFICERS OF THE INSTITUTION.

MEMBERS OF THE BOARD OF TRUSTEES... D. H. Davis, President.

Adam Heimberger, Vice President.

Thomas H. Clifton, Secretary.

Eli Marvin, Treasurer.

SUPERINTENDENT Geo. F. Edenharter, M. D.

MATRON Marion E. Edenharter.

ASSISTANT PHYSICIANS, DEPARTMENT

FOR MEN..... P. J. Watters, M. D.

F. M. Wiles, M. D.

Paul M. St. Clair, M. D.

ASSISTANT PHYSICIANS, DEPARTMENT

FOR WOMEN Sarah Stockton, M. D.

Max A. Bahr, M. D.

J. J. Hoffman, M. D.

Chas. T. King, M. D.

PATHOLOGIST James A. Jackson, M. D.

ASSISTANT PATHOLOGIST Ernest D. Martin, M. D.

STEWARD Simon P. Neidigh,

SECRETARY Cornelius Mayer.

RECORD CLERK Evangeline M. Smith,

BOOKKEEPER Wm. E. Cochran.

STOREKEEPER Wilbur G. Austin.

PHARMACIST James C. Jamison,

CHIEF CARPENTER William F. Cobb.

CHIEF ENGINEER Edward E. Frost.

REPORT OF THE BOARD OF TRUSTEES

REPORT OF THE BOARD OF TRUSTEES.

HON. J. FRANK HANLY, *Governor of Indiana*:

Sir—We, the undersigned Trustees of the Central Indiana Hospital for the Insane, do hereby submit our report for the fiscal year ending September 30, 1908.

Superintendent Edenharter has presented to us his report for said year, and we submit the same herewith for your consideration. The Superintendent's report contains an itemized statement of all expenditures during the year, and in addition thereto he has set forth recommendations as to the future needs of the institution. We invite your careful attention to his recommendations, which are heartily endorsed by us.

PROPERTY.

An appraisalment of the property belonging to the institution at the close of the year shows its value to be as follows:

Real estate	\$1,646,250 00
Personal property	381,807 19
Total	\$2,028,057 19

NUMBER OF PATIENTS.

The patients cared for at the institution during the past, with a corresponding table showing the number during the two preceding years, is as follows:

	1906.	1907.	1908.
Total number at beginning of year.....	2,070	1,976	2,035
Number received during year.....	441	382	397
Number discharged during year.....	373	206	272
Number died during year.....	162	117	151
Total number treated during year.....	2,702	2,358	2,432
Number on rolls at close of year.....	1,976	2,035	2,009
Average daily number actually present..	1,858.88	1,837.99	1,838.34

We again call attention to the overcrowded condition of the institution, which has been commented upon in the annual reports for a number of years past. In this connection we invite your attention to that part of the Superintendent's report wherein he discusses the crowded condition of the institution, together with his recommendations for relief.

APPROPRIATIONS AND EXPENDITURES.

The appropriations for the use of the institution during the past year consisted of the regular annual appropriations, together with certain specific appropriations made at the last regular session of the General Assembly. These appropriations, with the expenditures therefrom, were as follows:

Maintenance (regular)	\$310,000 00
With \$160 extra for each person actually present over a daily average number of 1,800 inmates each month, which, upon the basis of the daily average present for the past year, made the additional sum of.....	6,134 06

Total	\$316,134 06
Amount expended therefrom.....	313,385 48

Balance unexpended.....	\$2,748 58
Repairs	\$25,000 00
Amount expended therefrom.....	24,846 63

Balance unexpended.....	\$153 37
Clothing	\$15,000 00
Amount expended therefrom.....	14,968 61

Balance unexpended.....	\$31 39
-------------------------	---------

Specific Appropriations.

Painting	\$10,000 00
Amount expended therefrom.....	10,000 00

Plumbing	\$5,000 00
Amount expended therefrom.....	4,999 87

Balance unexpended.....	\$0 13
Fire protection	\$5,000 00
Amount expended therefrom.....	4,824 12

Balance unexpended.....	\$175 88
Electrical equipment	\$10,000 00
Amount expended therefrom.....	9,900 00

Balance unexpended.....	\$100 00
Cement work	\$2,500 00
Amount expended therefrom.....	1,083,83

Balance unexpended.....	\$516 17
-------------------------	----------

The several balances remaining of the above appropriations reverted to the general fund in the State Treasury at the close of the year, by operation of law.

SALE OF WASTE MATERIAL.

The old waste material sold from the institution during the year amounted to \$2,034.18, which amount has been paid into the State Treasury.

PER CAPITA COST OF MAINTENANCE.

The per capita cost for maintenance of the patients at the institution during the year, based upon the daily average number actually present, was \$170.47. The daily average number actually present was 1,838.34, and, estimating the cost of maintenance upon the basis of the expenditures from the maintenance fund, which was \$313,385.48, gives the above per capita cost. This apparent increase over the per capita cost of a year ago is due to the fact that the estimate of one year ago was based upon the period of eleven months instead of twelve months as covered by this report. The per capita cost for maintenance for the year just past is also higher than in the preceding years because of the increase in the price of everything that enters into the cost of maintaining the institution. The cost of provisions of every kind, as well as labor, has been greater during the past year.

IMPROVEMENTS.

The policy of improving the general condition of the property and of beautifying the grounds has been continued during the year, but we do not deem it necessary to refer in detail to these various improvements made.

NECESSARY APPROPRIATIONS.

The appropriations for the maintenance and improvement of the condition of the institution which we deem necessary for the coming General Assembly to make, are as follows:

Maintenance (regular appropriation).....	\$325,000
With \$160 extra for each person actually present over a daily average number of 1,800 inmates each month.	
Repairs	25,000
Clothing	15,000

In addition to these appropriations, specific appropriations should be made as follows:

Painting	\$5,000
Electrical equipment	4,000
Cement work	2,500
New floors	5,000
Vegetable house	1,500
Upholsterers' shop	3,500
Water supply	3,500

In addition to these appropriations, which are for the two years beginning October 1, 1909, an appropriation of \$10,000 additional should be added to the maintenance fund for the year beginning October 1, 1908, and should be made available for the use of the institution during the year ending September 30, 1909. This is absolutely necessary because of the increased cost of everything which enters into the expense of maintaining the institution. We call your special attention to that part of the Superintendent's report which discusses the need of these appropriations.

GENERAL CONDITION.

We congratulate Superintendent George F. Edenharter upon the excellent discipline maintained throughout the institution. The past year has been free from serious accidents of any kind in caring for the inmates, notwithstanding their crowded condition. His services have been in strict keeping with the high standard heretofore maintained by him.

In submitting you this, our last report in your administration, we thank you for the personal interest you have taken in our work and for the courteous treatment our recommendations have received at your hand.

Respectfully submitted,

D. H. DAVIS, President.

ELI MARVIN, Treasurer.

T. A. CLIFTON, Secretary.

A. HEIMBERGER, Vice-President.

Board of Trustees.

INDIANAPOLIS, IND.,

September 30, 1908.

REPORT OF THE SUPERINTENDENT

REPORT OF THE SUPERINTENDENT.

To the Honorable Board of Trustees:

Gentlemen—In submitting to you my report for the fiscal year 1907-1908, I insert, as an introduction to the same, and for your convenience, the following abstract of the statistical tables:

At the beginning of the fiscal year there were 2,035 patients—909 men and 1,126 women—enrolled on the records. At the close of the year we had remaining 2,009 patients—890 men and 1,119 women. As in the last three years, we had to reject all persons when the commitment papers showed a chronic and harmless condition, to relieve the overcrowded condition of the institution.

Three hundred and ninety-seven patients—212 men and 185 women—were admitted during the year; 272 patients—132 men and 140 women—were discharged; and 151 patients—99 men and 52 women—died. Of the 397 patients admitted, 93 were recom-mittals.

Two thousand four hundred and thirty-two patients were under treatment during the year—1,121 men and 1,311 women; the daily average number of patients actually present (not counting those absent on furlough) during the year was 1,838.34 patients.

The percentage of recoveries to the total number of patients under treatment is 5.71; the percentage of recoveries to the number admitted during the year is 35.012. The percentage of deaths is 6.209.

We have in this report, as in the last few years' reports, at the request of the National Conference of Charities and Corrections, inserted an additional table.

CASUALTIES.

We rejoice that there have been no serious mishaps of any kind.

NEED OF ROOM.

I direct your attention to the crowded condition of our Hospital in order that you may, to some extent at least, recognize the weight and nature of the responsibilities which rest upon us, and also realize the utter impossibility of securing the best results of institutional treatment for the patients under such environment.

The Central Indiana Hospital district is situated in the central, western and southeastern part of the State, and is composed of thirty-eight counties, which, according to the census of 1900, had a population of 1,036,680—practically one-half of her citizenship.

The Normal capacity of the Central Hospital is 1,605 beds.

The condition on the first day of October, 1908, may be stated as follows:

Normal capacity (beds).....	1,605
Forced capacity (beds).....	1,748
Patients enrolled	2,009
Patients present	1,850
Patients furloughed	159

An analysis of this statement shows that we have 143 more bedsteads in use than our normal capacity. It shows that we have 404 more patients enrolled than our normal capacity, and 261 more than our forced capacity.

It also shows that we have actually present 245 more patients than our normal capacity and 102 more than our forced capacity.

These 102 patients sleep upon mattresses, placed wherever we can find floor space.

In addition to this, we must always hold ourselves in readiness to care for the furloughed patients, many of whom are liable to be returned at any moment.

This showing renders it unnecessary for me to argue at great length that this excess of patients over our normal capacity is a bar to their proper classification and treatment, and that it deprives them of the surroundings so essential to their welfare.

The patients are less amenable to discipline.

Individual treatment, which undoubtedly produces the best results, is seriously interfered with.

The extra labor entailed upon the physicians and employes is inconceivable.

This overcrowding not only deprives the patients of the room which they so much need, but it also deprives the employes of proper sleeping accommodations to which they are clearly entitled.

Employes cannot do their work in an institution of this character, unless they have the necessary room for sleep, recreation and rest.

It may be asked, why we have permitted this excess?

We answer that Humanity demanded it.

Our duty was clear, and we met the situation as best we could.

We have no apologies to offer for our action, but we may state the facts.

We know that with the condition existing at most of the county jails and poor asylums, it is almost criminal to condemn an insane person to their confines.

We also know that even with our overcrowding the patient will receive better treatment at the hospital.

We feel that if we had rejected the 245 patients, which are here over our normal capacity, and compelled the counties to provide for them at the jails or poor asylums (until they could have state care), that there would have been such an awakening of public sentiment, and such a forcible demand upon the authorities, for the betterment of local jails and poor asylum conditions that it could not have been ignored.

But, gentlemen, while this process of coercion and education might have accomplished the correction of almost inhuman and unbearable conditions, yet it would have been done at the expense and the welfare of the innocent insane individuals.

Therefore we assumed the responsibility, and have rejected but few acute cases, and while we have rejected many chronic ones, we have at the earliest opportunity provided for their admission.

County officials and all others should recognize that under the circumstances set forth insistence upon the admission of patients does not increase the number of our beds, neither does it increase our ability to accommodate the particular patients in which they are interested.

There is a continuous and growing demand for the admission of senile individuals to the hospital.

Persons that are merely suffering with the forgetfulness and peculiarities natural to advanced years and who only require watching and ordinary care.

The admission of every one of these cases deprives the hospital of the ability to admit an acute case.

The one offering no hope of restoration, the other may be reclaimed and restored to himself, his family and community.

Conditions that delay the immediate admission of acute cases are not calculated to conserve the interests of the State, but on the contrary increase the burden of taxation, because they favor chronicity in the afflicted individual.

For your enlightenment as to the conditions which confront us

in this district today we present the figures in a form different from the one previously given :

The normal capacity of the Central Hospital is (beds).....	1,605
Number of patients enrolled is.....	2,009
Number of insane in district not enrolled is.....	410
Total number of insane in the district is.....	2,419
The excess over normal capacity is.....	814
The excess over forced capacity is.....	671
The excess over normal capacity, excluding those on furlough, is...	655

This shows an insane population in this district, unprovided for by the State, of 814, an increase of over 100 since a tabulation was prepared for the Legislature of 1905.

State care of all of the insane is the desire of every one familiar with the subject, and our effort should not cease until there is a bed provided, under normal conditions, at a state hospital for every insane individual within our borders.

PATHOLOGICAL DEPARTMENT.

During the past year we issued a summary of the work done in this department from September 1, 1903, to October 31, 1906. We shall soon issue another covering in detail the work from November 1, 1906, to September 30, 1908, and after this, if conditions permit, there will be an annual publication.

Therefore, the detailed report of work in this department will be omitted in the future from our annual report to your board.

Dr. Charles C. Manger, who entered the service as pathologist July 13, 1907, resigned on July 20, 1908, to take charge of private interests which demanded his personal attention.

Dr. James Allen Jackson was employed as his successor on August 17, 1908. He comes to us with the highest recommendations, and we have every reason to expect from him work of the most excellent character.

The staff of assistant physicians, upon whose work so much depends in this department, are to be commended for the faithful and painstaking manner in which they are meeting the requirements for clinical data and also for their deep interest and assistance in upbuilding the scientific work at this institution.

The Indiana University School of Medicine, represented by Professors F. F. Hutchins, M. D., E. C. Reyer, M. D., A. E. Sterne, M. D., will give the following course of lectures on Mental and Nervous Diseases.

In connection therewith J. Allen Jackson, M. D., representing

the Pathological Department of this Institution, will give a course of lectures on Neuro-Pathology.

A COURSE IN MENTAL PATHOLOGY.

Special clinics are provided for those who desire to take instruction in Mental Pathology. This course will be in charge of Professor E. H. Lindley of Indiana University.

These clinics are designed to demonstrate those phenomena of insanity which are especially instructive to students of psychology.

The course this year will include the following:

1. The form of insanity:

Melancholia, mania, dementia, idiocy, imbecility, dementia praecox, impulsive and compulsive insanity; paranoia, paralytic dementia, and senile dementia.

2. Psycho-pathology:

a. Disturbances of perception (illusions, pseudo-hallucinations and hallucinations).

b. Disturbances of mental elaboration (amnesia, paramnesia, loss of orientation, malformation of ideas and concepts, disturbances of judgment and reasoning, disturbances of self-consciousness, retardation and flight of ideas, etc.).

c. Disturbances of the emotions (anhedonia, delusions, sporadic and systematized).

d. Disturbances of volition and action (impulsive and compulsive ideas, echo-praxis, negativism, stereotypism, abulia, etc.).

Cases illustrative of the above will be presented to the classes. Members of the hospital staff will alternate in arranging cases for all the clinical lectures.

The following general rules will govern the course:

The lectures will commence September 29, 1908, at 2 P. M., and be continued each Tuesday thereafter.

All students must be in their seats promptly at the hour scheduled.

Questions will be furnished by the Pathological Department in the final examinations.

Due notice of autopsies will be given the class by telephone to college.

Certificates of attendance will be issued by the college for these lectures.

Students must maintain quiet while in the grounds or buildings.

Smoking in the department is prohibited.

These lectures are free to practitioners and students of medicine. Others will not be admitted except upon special permission by the Superintendent or Lecturer.

IMPROVEMENTS AND REPAIRS.

Under this heading we mention only the more important, as the various exhibits show them in detail.

Electrical Equipment.—Two 125 k. w. Curtis turbo generators, 110-120 volt, 3-wire, non-condensing; a two-panel switchboard, with all necessary wire connections, were purchased and installed.

Fire Equipment.—Six 250-gallon stationary chemical fire engines, with all of the accessory parts, pullboxes, hoseracks, gauges, etc., were placed in the Department for Men.

Plumbing.—The entire ward plumbing at the Department for Men was torn out and replaced with new and approved fixtures.

Cement Walks.—The grove in front of the Department for Women was encircled by a four-foot cement walk. The Department for Men had all doors connected with the main walk.

Boiler-house.—The usual amount of repair work was done in this department.

Floors.—New maple floors were laid in three of the wards at the Department for Men.

Tinwork.—The entire tinwork at both departments was thoroughly examined and repaired where necessary.

Pumphouse.—The pumphouse in the rear of the Department for Women was partially torn down and rebuilt.

Painting.—The entire wood, tin and iron work at both of the departments and the Sick Hospital was repainted.

RECOMMENDATIONS.

We respectfully urge your Board to request the following amounts from the General Assembly of 1909:

First—

The sum of \$10,000 additional for maintenance purposes for the fiscal year of 1908-1909, to be immediately available.

This is rendered necessary because of the increased price demanded for all commodities.

The following table will clearly show the necessity for this amount, and also the increased amount asked for maintenance for the ensuing years:

A COMPARATIVE STATEMENT OF THE COST OF VARIOUS ARTICLES OF SUBSISTENCE FOR THE PERIODS 1904-05 AND 1905-06 AND 1906-07 AND 1907-08.

ARTICLES.	Amount.	Cost.	Amount.	Cost.	AVERAGE COST.		Per Cent.
					First Period.	Second Period.	Increase.
Beef.....	717,426 lbs.	\$39,257 45	666,478 lbs.	\$46,302 56	.0547	.0695	26½
Hams.....	137,962 lbs.	14,689 17	128,443 lbs.	14,966 21	.1064	.1165	9.4
Lard.....	85,677 lbs.	6,441 70	72,527 lbs.	6,462 59	.07518	.0891	14½
Beans.....	66,847 lbs.	1,959 87	59,896 lbs.	2,018 77	.0293	.0338	15½
Rice.....	36,700 lbs.	1,589 38	36,800 lbs.	1,940 50	.0433	.0527	21½
Potatoes.....	23,038 bu.	11,221 90	22,484 bu.	13,847 45	.4871	.6159	26
Canned peaches.....	4,699 doz.	9,556 88	2,252 doz.	5,291 00	.203	2.35	15½
Dried apples.....	24,000 lbs.	1,760 00	24,700 lbs.	2,158 26	.0733½	.0873	19
*Milk.....	125,504 gal.	14 981 69	119,400 gal.	16,859 41	.12 *	.14*	16½
Eggs.....	34,930 doz.	6,185 39	34,654 doz.	6,243 39	.1770	.1801	1½

*The price of milk for 1908-1909 is 17 cents per gallon.

Practically everything entering into all hospital work has advanced in price.

The increase in the pay roll last year exceeded the year before by \$22,894.18.

MAINTENANCE.

For this purpose we ask you to recommend an appropriation of three hundred and twenty-five thousand (\$325,000.00) dollars, and at the rate of one hundred and sixty (\$160.00) dollars per capita per annum for each person actually present over a daily average number of 1,800 inmates each month for each fiscal year, 1909-1910 and 1910-1911.

REPAIRS.

For this purpose we ask your recommendation for an amount of twenty-five thousand (\$25,000.00) dollars for each fiscal year 1909-1910 and 1910-1911.

CLOTHING.

For this purpose we ask you to recommend an amount of fifteen thousand (\$15,000.00) dollars for each fiscal year of 1909-1910 and 1910-1911.

SPECIFIC FUNDS.

Painting:

We ask for an appropriation of five thousand (\$5,000.00) dollars.

Electric Equipment:

We ask for an appropriation of four thousand (\$4,000.00) dollars.

Cement Work:

We ask an amount of twenty-five hundred (\$2,500.00) dollars.

Floors:

We ask an amount of five thousand (\$5,000.00) dollars for new floors in the wards at the Department for Men.

Vegetable House:

For this purpose we ask the sum of fifteen hundred (\$1,500.00) dollars.

Upholsterers' Shop:

For this we ask the sum of thirty-five hundred (\$3,500.00) dollars.

Water Supply:

For this purpose we ask thirty-five hundred (\$3,500.00) dollars

To the Officers and Employees:

We again recognize the efficiency of our officers and the faithfulness of the employees. They have rendered effective assistance in the work of the institution, and we take pleasure in making public acknowledgment.

To the Board:

We thank you for the encouragement given us during the past year and trust that we will merit a continuation of the same spirit in the future.

Sincerely yours,

GEO. F. EDENHARTER, M. D.,
Superintendent.

STATISTICAL TABLES

MOVEMENT OF POPULATION FOR THE FISCAL YEAR 1907-1908.

RESULTS.	Men.	Women.	Total.
Number of patients at beginning of the year.....	909	1,126	2,035
Admitted during the year.....	212	185	397
Whole number under treatment.....	1,121	1,311	2,432
Discharged as recovered.....	56	83	139
Discharged as improved.....	68	44	112
Discharged as unimproved.....	8	13	21
Died.....	99	52	151
Remaining at the close of the year.....	890	1,119	2,009
Percentage of recovered of whole number under treatment.....	4.995	6.331	5.71
Percentage recovered to number admitted.....	26.415	44.864	35.012
Percentage died of whole number treated.....	8.631	3.966	6.209
Daily average number actually present.....	823.466	1,014.895	1,838.261

ADMISSIONS, DISCHARGES AND DEATHS, FROM BEGINNING OF THE HOSPITAL, 1848.

RESULTS.	Men.	Women.	Total.
Admitted.....	13,857	11,803	25,660
Discharged as recovered.....	5,600	4,861	10,461
Discharged as improved.....	2,216	2,178	4,394
Discharged as unimproved.....	2,459	1,533	3,992
Discharged as not insane.....	37	29	66
Discharged as feeble-minded.....	6	6
Died.....	2,642	2,062	4,704
Total number discharged and died.....	12,954	10,669	23,623

THIRD ANNUAL REPORT

of the
Trustees and Superintendent
of the

Indiana Village for Epileptics

at New Castle

For the Fiscal Year Ending September 30
1908

TO THE GOVERNOR

INDIANAPOLIS:
WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING.
1908.

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
November 13, 1908.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 2, 1908.

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

JOHN C. BILLHEIMER,
Auditor of State.

December 2, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 2, 1908.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer December 3, 1908.

HARRY SLOUGH,
Clerk Printing Bureau.

REPORT OF THE BOARD OF TRUSTEES.

HONORABLE J. FRANK HANLY, *Governor of Indiana*:

Sir—The undersigned Trustees for the Indiana Village for Epileptics respectfully make to you their report for the fiscal year beginning October 1, 1907, and ending September 30, 1908, as follows:

By act of March 6, 1905, an appropriation of \$150,000.00 was made for the purchase of a site for the Indiana Village for Epileptics and for such other purposes in preparing the site for the reception of patients as might be available out of the said fund. The site was purchased one year later, and on the 17th day of March, 1906, you appointed Trustees as follows:

Charles L. Henry, for one year;

Enoch G. Hogate, for two years;

Silas W. Hale, for three years.

Mr. Henry's term expired March 17, 1907, and in his place you appointed George Nichol, of Anderson. By the act of 1907, the Boards of the various State Institutions were increased to four members, and on the 25th day of June, 1907, you appointed Oliver L. Nash as Trustee.

After the Board was appointed in March, 1906, the first duty, under the law, was to appoint a Superintendent having the qualifications that are required by law, and on the 9th day of May, 1906, Doctor Walter C. Van Nuys was by the Board appointed to that place, and he assumed the duties of his office on the 2nd day of July, 1906.

The amount of land purchased for said Village was 1,244 acres, and the cost of the land, including the expenses of the commission that selected and purchased the same, was \$125,579.34, leaving a balance of \$24,420.66 available for the erection of buildings and other purposes of said Village.

The land purchased was composed of a number of farms. The buildings and fences were in bad repair; in fact, but one house on the whole tract was habitable without considerable repairs. The other dwelling houses and outbuildings were in an extremely dilapidated condition.

With the \$24,420.66 above mentioned, the Board of Trustees set about putting the farm in shape for cultivation as far as the means at hand would permit, buying horses, harness and wagons, seeds for the farm, and the erection of some buildings for the housing and care of patients. Out of this sum two buildings were erected to provide for forty patients and necessary employes. An old house was repaired and furnished to serve as a residence for the Superintendent.

On the 19th day of August, 1907, the Governor's proclamation was issued, giving notice, as by law provided, that the Indiana Village for Epileptics was ready for the reception of patients.

BUILDINGS ERECTED.

On the 6th day of September, 1906, a contract was let for the erection of said two buildings for Colony Group No. 1, the cost of which was as follows:

The general contract	\$14,975 00
The sewer	195 70
Extras and additions	644 95

Total cost of buildings in Group No. 1.....\$15,815 65

The Legislature of 1907 made an appropriation of \$75,000 for buildings and equipment.

On the 6th day of September, 1907, contracts were let for two buildings in Colony Group No. 2, the cost of which was as follows:

The general contract	\$26,854 00
Extras and additions	721 04
Heating and plumbing	7,507 07
Heating and plumbing extras	656 19
Sewer	463 00

Total for said two buildings of Group No. 2.\$36,201 30

On the 9th day of May, 1908, contracts were let for a third building in Colony Group No. 2, the cost of which was as follows:

The general contract	\$14,104 00
Contract for plumbing	1,157 00
Contract for heating	1,625 00

Total for third building of Group No. 2....\$16,886 00

This last building will be ready for acceptance by November 7, 1908. When this building is accepted and filled with patients, according to the design of the law, we shall have in the Village 116 patients.

A small building has been erected to serve as an office and meeting place for the Board. The cost of this building was, approximately, \$750.

THE FARM.

The General Assembly of 1907 appropriated \$25,000 for furnishings for buildings already erected, topographical survey, fencing, farm drainage, horses and mules, farm implements, seeds for farm and garden, wagons, carriages and buggies, harness, repairs to farm buildings, cisterns, walks, roads, grading brick plant and maintenance, which sum was made available April 1, 1907. A large part of this sum was expended for maintenance. Out of this sum the farm has been put in better repair, some fencing built and several of the farm houses repaired. Horses, wagons, seeds, farm implements, etc., have been purchased. The report of the Superintendent, accompanying this report, will detail the manner of the expenditure of this sum.

One of the great needs is adequate outside fencing. The Village has a large amount of pasture land. The pasture ought to be rented out, not only for the revenue it will bring but the pasture is better if properly grazed. The fences, both outside and inside, are in such condition that stock cannot be confined to the pastures. The rental of the pasture land for one year, it is believed, will pay the cost of fencing.

The farm needs a large amount of drainage to insure the

highest productiveness. Some fields need drainage in places, some extensive drainage. This work, properly accomplished, lasts many years.

Orchards, vineyards and small fruits should be set out from time to time, and the work ought to commence now. The Village ought to put up all its fruit supplies for the winter months, which would result in a saving to the State and would provide employment for female patients.

Cribs, granaries, facilities for raising hogs, poultry, etc., should be furnished. These expenditures will result in increased income from the farm. During the year just closed \$4,328.97 was paid into the State Treasury from the sale of farm products.

Additional cement walks are needed. Roads should be built to provide access to buildings erected. *Particularly ought a road to be graded, drained and graveled from the Muncie Pike to Colony Group No. 2, which stands approximately one-quarter of a mile from the said Pike. Access to this group is now had by driving across a pasture. The road, in very wet or freezing weather, would become practically impassable.*

For all the things mentioned above to improve the farm, and prepare it for working with our own force, for roads, cement walks, etc., we believe there should be an annual appropriation of \$9,000 for the next biennial period—\$2,000 of the first year's appropriation to be available April 1, 1909, that horses, wagons and farming implements may be purchased and fences erected so that grazing land may be utilized.

POPULATION FOR THE FUTURE.

At the present time our population consists entirely of men and boys. A few are not able, mentally or physically, to do much work, but most of them, under proper control and management, can do a fair amount of work. We are strongly impressed that, within the next biennial period, provision should be made for at least fifty women and an equal number of boys. Provision for women can be made by locating two cottages for men on the east side of the

valley of the Blue River and transferring thereto the patients now at Colony Group No. 1. Male patients then will all be on the east side of the valley. Women can then be admitted to the buildings of Colony Group No. 1. It will be necessary, however, to build a day room and lavatory in connection with this group.

Experience has shown that boys should not be cared for in the same buildings with men. Habits of thought, language and conduct of some of the men are such that boys, if possible, should not be subjected to them. In connection with the building for boys, provision should be made for school, so that the boys may receive the rudiments of an education.

LAUNDRY.

The matter of washing and ironing for patients and employes is a question of growing magnitude. When the population for which we are almost prepared is obtained our laundry bill will be about \$2,000 per year. This will increase as the population increases. With the large and increasing outlay for laundry work, we deem it the part of economy to build and equip a laundry of our own at the earliest practical moment.

MAINTENANCE.

For the maintenance of the institution there should be appropriated, as heretofore, a per capita allowance per year of \$300, based upon the average monthly population.

APPROPRIATIONS NEEDED.

Maintenance.

Per capita per annum for each person, based upon a daily average actually present each month	\$300
--	-------

Farm and Grounds.

Fencing, purchase of horses, harness, wagons, farm implements and tools, drainage and ditching, building of corn cribs, granary, poultry houses, piggery, the planting of orchards, vineyards and small fruit, the building of cement walks, roads and grading (annually)	\$2,000
---	---------

(Two thousand dollars of the first year's appropriation for the farm and grounds should be made available April 1, 1909.)

School House.

Purchase of school house and one acre of land..... \$1,200

Buildings and Equipment.

Two cottages for 50 men\$40,000

Additions to Colony No. 1 to accommodate female patients..... 7,500

Two cottages for 50 boys 36,000

Repairing and equipping farm house to serve as dining room and
kitchen for boys 2,000

Repairing and furnishing school house 500

Laundry building and equipment..... 7,500

Water supply and sewage disposal 6,000

Total for Buildings and Equipment\$99,500

Respectfully submitted,

SILAS W. HALE,
OLIVER L. NASH,
ENOCH G. HOGATE,
GEORGE NICHOL,
Trustees.

SUPERINTENDENT'S REPORT.

To the Board of Trustees:

Gentlemen—It becomes my duty to submit the report of the operations of the Indiana Village for Epileptics for the year ending September 30, 1908.

The Indiana Village for Epileptics was established by act of the General Assembly for 1905 for "the scientific treatment, education, employment and custody of epileptics."

The present status of the work is as follows:

One thousand two hundred and forty-four acres of land purchased.

Four buildings for patients erected, furnished and occupied.

One building for patients will be completed next month; furnishings for this building have been purchased and are on the premises.

One four-room frame office building, erected, furnished and occupied.

One small dairy house erected over spring of running water.

Five wells drilled.

Three small pump houses erected and gasoline engines installed therein.

One gasoline and oil house erected.

One house repaired for use as Superintendent's residence.

One house moved, relocated, remodeled and extensively repaired for farm residence.

Four houses repaired for use of employes.

One barn and one carriage house moved, remodeled and extensively repaired.

One barn repaired for use as dairy barn.

Three other barns repaired.

A topographical survey of the land has been made. Cement walks have been laid at both Colonies; the grading and road making has been completed at Colony 1, the grading is being done at Colony 2; 1,245 rods of good wire fence and 30 rods of plank fence built. Farm wagons, farm implements, tools, harness, 12 horses, a dairy herd, etc., have been purchased; the raising of hogs and poultry has been started.

The Pennsylvania Railroad Company has placed a small siding for our use on their right of way. The C., C., C. &

St. L. Railroad Company has placed a siding upon the State land, and this will be extended upon request of the Board of Trustees.

The first two buildings erected constitute Colony Group No. 1, as follows:

One "Family Building," containing rooms for employes, dining room and kitchen for patients and, in the basement, the steam heating plant for both buildings.

One "Dormitory Building"—two dormitories communicate by corridors with a central lavatory room. Each dormitory has a clothing and attendants' room. The lavatory is used in common.

These buildings provide quarters for 40 male patients. Nine employes can be quartered in them. The first patient was admitted September 16, 1907, and five were present at the beginning of the fiscal year.

Colony Group No. 2 consists of three buildings as follows:

One "Family Building" containing rooms for employes, dining room and kitchen for patients and, in the basement, a hot water heating plant for the "Family" and "Dormitory" buildings.

One "Dormitory Building." Two dormitories, each containing twenty-five beds, communicate with a large day-room. Lavatory and bath room are in the rear. Each dormitory is provided with a seclusion room for disturbed patients, a clothing room and attendants' room.

One building for a class of patients that cannot be handled to advantage in an exclusively dormitory building. This building contains, on the first floor, a small reception room, an attendants' room, an airy, commodious day-room, nine single rooms for patients and a lavatory. On the second floor are located a dormitory for seventeen patients, an attendants' room, a lavatory, bath room and clothing room. The steam heating plant for this building is located in the basement.

Two wells have been drilled for this Group. Both are connected with a 6,000-gallon storage compression tank in the basement of the "Family Building." Gasoline engines are used in pumping. In case one engine or pump should break down, the other is relied upon to furnish water until repairs can be made.

The "Family Building" and "Dormitory Building," of this Group, were opened for admission of patients April 25, 1908. The third building of the group will be completed

next month. This group, when completed, will provide for 76 patients; 13 employes can be quartered in them.

All our patients are males. No buildings for females have been erected.

MOVEMENT OF POPULATION.

Fiscal Year 1907-1908.

Present September 30, 1907.....	5
Admitted	79
Discharged unimproved	1
Died	1
Present September 30, 1908.....	81
On visit September 30, 1908.....	1
Total enrolled September 30, 1908.....	82
Average number present.....	39.36773

One death occurred during the year, the only death since the Village was opened. The patient, apparently enjoying his usual good health, was weeding in the garden when an epileptic seizure occurred, from which he did not recover. Single attacks of epilepsy are frequently fatal, although not usually so considered.

The general health of our patients has been good throughout the period. We have had no epidemics. We have had no case of serious illness of any kind, with the exception of those conditions peculiar to epilepsy. Accidents, the result of patients falling in epileptic seizures, have occurred as follows: Fracture of femur, 1 case; fracture of clavicle, 1 case; fracture of base of skull, 1 case; dislocation of shoulder, 3 cases; severe burn, 1 case; numerous cuts and bruises, more or less severe. Accidents cannot be entirely prevented. Epileptics are extremely venturesome. The most rigid supervision is required to prevent the daily occurrence of serious accidents.

There have occurred during the period 3,928 seizures of the grand mal type and 5,016 seizures of the petit mal type, a total of 8,944 seizures. Based upon the daily average of our population, the average number of seizures for each patient has been 227.2+. This is misleading, however, because about half of the seizures occurred in a half-dozen patients, in serial attacks or conditions of "status."

Our population is divided among the various counties as follows:

Adams	3	Lawrence	1
Allen	6	Madison	3
Blackford	1	Marion	5
Boone	1	Martin	1
Brown	2	Monroe	3
Carroll	2	Montgomery	1
Cass	2	Morgan	1
Clark	2	Pike	3
Clinton	2	Posey	1
Dubois	3	Pulaski	1
Fayette	1	Randolph	2
Floyd	1	Shelby	1
Fulton	1	St. Joseph	2
Greene	2	Sullivan	1
Hamilton	1	Switzerland	1
Huntington	1	Union	1
Jackson	1	Vigo	2
Jasper	1	Vanderburgh	1
Jay	3	Wabash	1
Jefferson	2	Wayne	3
Jennings	2	Warrick	1
Johnson	1	Wells	1
Knox	1	Whitley	2
Lagrange	1		

An effort has been made to divide our capacity as equitably as possible among the various counties of the State. This effort has, to some extent, been defeated by the requirements of the law and the pressure for admission from those counties having a large population. The law leaves no choice in the matter of first admissions. The patients admitted first must be those whose labor can be utilized by the institution. In some instances the applications of helpless, paralytic or demented patients from counties not represented have been rejected in favor of able-bodied applicants from counties already represented. This is unavoidable, and will be, until buildings have been erected here for the several classes of epileptics and each class can be kept to itself.

Of the total of 84 admissions from the opening of the Village to the end of this fiscal year, 40 have been from

county poor asylums and 7 from county jails. Of the remaining 37 admissions, 5 have, at some time, been confined in the insane hospitals or School for Feeble-Minded Youth in this State. The remaining 32 younger patients, whose average age is 21, have had no previous institutional experience. The majority of them are manly, intelligent boys and young men. All are natives of Indiana. Without provision here, it is safe to assume that at some time in the future the majority of them would find their way into the State hospitals for the insane or the county poor asylums and jails of the State. As the capacity of this institution increases one of the sources of supply of patients for the insane hospitals of the State will be diminished.

FARM AND GARDEN.

The bulk of the farm work this year, as heretofore, has been done on shares.

One hundred and twenty-seven acres of oats were sown, the Village receiving one-half the crop.

Three hundred and thirty-six acres of corn were planted, the Village receiving one-half the crop cribbed.

Eighty acres of clover and 157 acres of timothy, orchard grass and mixed hay were taken care of. Part of the hay was sold in the field, part put up on shares and part put up by our patients and employes, with our own teams.

Our herd has kept us supplied with milk and butter. Milk is one of the best articles of diet for epileptics.

Our garden has been a source of profit and pleasure to us in spite of the dry season. About 10 acres of garden and 20 acres of potatoes were planted. Our potato crop, still in the ground, will supply us for a year and furnish seed potatoes next spring. The garden, potatoes, etc., were tended by the patients, under the supervision of one paid employe.

You are referred to Exhibit No. 5 for statement of farm and garden products sold and money turned into the State Treasury, and to Exhibit No. 6 for a statement of farm and garden products used and on hand.

OUR NEEDS.**FARM**

It should be remembered that the site of the Village embraces 1,244 acres of rich agricultural land. A large part of the land, before its purchase by the State, belonged to persons who did not live thereon, but whose tenants occupied the houses. It would be a difficult task to find in Henry County a tract of land of equal size with so few improvements. It would be more difficult to find as large a tract of land of equal productiveness. Most of the houses were in an extreme state of dilapidation. Some of them have been repaired. We have about $10\frac{1}{2}$ miles of outside fencing. In my report of two years ago I stated that all of the outside fencing was old and in bad condition. I now wish to emphasize that statement as strongly as possible. Gates have rotted away and fallen, fence posts have rotted at the ground, wires have broken and pickets have fallen down. Efforts at repair are of very little value. We have about 300 acres of valuable pasture land over and above our present needs. This land has produced no return to the State for two years, and during this time pasture land has been at a premium. If properly fenced, every acre of it could be rented at a good price. The rental for one year would more than pay the cost of fencing.

Another year we should do more of our farm work and lease less land on the shares. More than \$4,300 was turned into the State Treasury during the present fiscal year. It should be remembered that an equal amount went to those persons who worked the land on shares. In order to farm we must have more horses, harness, wagons and farm implements of various kinds. We have plenty of epileptic labor that can, and should be, so utilized. One patient now drives a team and has the entire care of it. This man fills the position of a paid employe.

An annual expenditure for farm drainage will be necessary for some years to come. Several of our best fields should be drained, in places. Some fields should be extensively drained. The Spring and Fall rains cause overflows,

which could be prevented if the water was properly carried away.

We need crib room for corn, granaries, and more room for hay. Pig pens should be built and a large number of brood sows purchased. We need facilities for caring for poultry. We should be able to furnish all our own eggs.

The planting of orchards, vineyards and small fruits should receive early attention. A start in this direction should be made next year and continued each succeeding year. The gathering and canning of fruit should furnish employment for female patients.

We shall need additional cement walks for our new buildings. A road will be necessary to connect the buildings of Colony Group No. 2 with the "Muncie Pike." The only access to this group is across a hilly pasture. In wet weather this road is almost impassable.

For the purposes mentioned above—fencing, purchase of horses, harness, wagons, farm implements and tools, drainage and ditching, building of corn cribs, granary, poultry houses, piggery, the planting of orchards, vineyards and small fruits, the building of cement walks, roads and grading—I would recommend an annual appropriation of \$9,000 for the next two years, with the request that \$2,000 of the appropriation for the first year be made available April 1, 1909, in order that we may purchase horses for next season's work and do some very necessary fencing.

NEW BUILDINGS AND EQUIPMENT.

In my report of two years ago I advocated, in the development of the Village, as complete a separation of the sexes as might be obtained. The Blue River Valley, three-quarters of a mile wide, should, in my opinion, separate the sexes.

On either side of this valley, the high ground should be utilized for building purposes. As suggested two years ago, three groups of buildings for males and three for females could advantageously be erected, as follows:

On each side of the valley—

One group for the better class of adults.

One group for the better class of children of school age.

One group for low-grade adults and children.

Thus, six distinct centers would be established, each subject to further subdivision and classification. Each center would have its industries, and the children's groups schools.

The laundry work for the entire Village could be done in one center; in another the baking, mattress making, etc.

With increase in population and the development of epileptic labor, new industries may be added.

I see no reason for departure from this general plan.

The pressure for the admission of patients to the Village is extreme. If the institution was now fully equipped for 1,250 patients, it could be immediately filled. Surely, there cannot be a greater demand for State care for any class of unfortunates. The lot of the epileptic, unprovided for, in Indiana, is a pitiable one. Since the establishment of this institution epileptics are excluded from some of the institutions to which they formerly had access, upon the ground that the State has made provision for them here. In answering the appeals of the relatives of epileptics we can only say that provision has not yet been made for them. Letters of inquiry or formal applications for admission are received daily.

I firmly believe that more buildings than those now requested should be erected here during the next two years, but realizing that further provision must be made for the insane and other dependents, only the most urgent of our needs are now brought forward.

TWO COTTAGES FOR MEN.

Colony Group No. 1 is situated west of the Blue River valley; Colony Group No. 2 east of the valley. Both groups are for men. The men of Colony Group No. 1 should be transferred to the east side of the valley and housed in two

cottages, each complete with dining-room and kitchen. All male patients will then be on the east side of the valley. The cost of the two cottages is estimated at \$40,000.

ADDITIONS TO COLONY NUMBER ONE.

The buildings of Colony Group No. 1 were erected with the money that remained after the purchase of the land for the site of the Village. Funds were not available for a day-room and lavatory for use during the day. For the accommodation of female patients these are essential. For the addition of a day-room and lavatory for this group and the enlargement of the heating plant, \$7,500 will be required.

This improvement will provide for the accommodation of 40 women. The demand for the admission of women is extreme. It is disgraceful that epileptic women should be confined in the county poor asylums and especially in the jails of the State.

TWO COTTAGES FOR BOYS OF SCHOOL AGE.

In the great majority of cases epilepsy begins in childhood or early youth. We must get these cases early in order to accomplish much good. For erecting two cottages for 50 boys \$36,000 will be required. This will be the beginning of our group of buildings for boys of school age. About 250 boys should ultimately be provided for in this group. I am convinced that for children congregate dining-rooms and kitchens are preferable to separate dining-room and kitchen in each cottage. The cost of construction, food supplies and help are all decreased by the adoption of the former plan. Therefore, I would not recommend that dining-rooms and kitchens be erected in connection with these cottages. Neither would I recommend that a congregate dining-room and kitchen for 250 patients be erected in this group at the present time. It would be much too large for immediate needs.

I would recommend that one of the old frame farm

houses adjacent to the proposed site for these buildings be repaired and used for a dining-room and kitchen. The cost of this improvement, with equipment, will be \$2,000.

PURCHASE OF SCHOOL HOUSE.

Within two hundred yards of the proposed site for two cottages for boys stands a brick school house that formerly belonged to the township. When this tract of land was purchased by the State and owners and tenants left the property, there was no longer need for a school house, and this building, with one acre of ground, passed into private hands. This acre of ground cuts a notch in the State property. It should belong to the State, even if the building could not be utilized.

School facilities must be provided for boys of school age and this building will serve as a school house and place for holding services for some time to come. The property can be purchased for \$1,200, and the appropriation of this sum is strongly recommended.

REPAIRING AND FURNISHING SCHOOL HOUSE.

For repairing and furnishing school house, providing desks and other school equipment, the sum of \$500.00 will be required.

LAUNDRY.

All our laundry work is done at steam laundries in New Castle. We paid out for laundry bills during the past fiscal year \$904.42. Our laundry bill for the coming year will be at least twice that amount. A laundry should be provided, ready for use when our population is increased. Plans have been made for a laundry building large enough to do the work for 1,250 patients. One wing of this building should be erected and equipped during the next biennial period. The cost of building one wing and equipment will be \$7,500.

WATER SUPPLY AND SEWAGE.

At least three wells must be drilled and pumping facilities provided. Sewage must be disposed of in a sanitary manner. For water supply and sewage disposal \$6,000 will be needed.

MAINTENANCE.

It will be necessary for our allowance for maintenance to remain at \$300 per capita per annum for each person, based upon a daily average actually present each month. This amount may seem large in comparison with the per capita cost of operating large institutions, but a comparison with the per capita cost of operating small institutions, started in a similar way, will disclose the fact that this request is reasonable.

SUMMARY OF NEEDS.

Maintenance.

Per capita per annum for each person, based upon a daily average actually present each month.....	\$300 00
---	----------

Farm and Grounds.

Fencing, purchase of horses, harness, wagons, farm implements and tools, drainage and ditching, building of corn cribs, granery, poultry houses, piggery, the planting of orchards, vineyards and small fruit, the building of cement walks, roads and grading, annually.....	\$9,000 00
---	------------

School House.

Purchase of school house and one acre of land.....	\$1,200 00
--	------------

Buildings and Equipment.

Two cottages for men.....	\$40,000 00
Additions to Colony No. 1.....	7,500 00
Two cottages for boys.....	36,000 00
Repairing and equipping farm house to serve as dining room and kitchen	2,000 00
Repairing and furnishing school house.....	500 00
Laundry	7,500 00
Water supply and sewage disposal.....	6,000 00

Total for buildings and equipment.....	\$99,500 00
--	-------------

IN CONCLUSION.

I wish to commend the heads of departments who have faithfully and loyally discharged their duties.

The monthly wage paid attendants is so small that frequent changes are inevitable, leading to considerable inconvenience. I am deeply indebted to those who have remained and who have cheerfully and faithfully performed their duties.

I am grateful for your constant interest, support and co-operation.

Respectfully submitted,

W. C. VAN NUYS,
Superintendent.

REPORT OF BOARD OF TRUSTEES.

KNIGHTSTOWN, IND., September 30, 1908.

TO HIS EXCELLENCY, J. FRANK HANLY,
Governor of the State of Indiana:

We, the Trustees of the Indiana Soldiers' and Sailors' Orphans' Home, Knightstown, Indiana, submit our annual report of the fiscal year ending September 30, 1908.

The institution has been conducted in much the same way as shown in our former reports. Only such changes have been made as were thought best in the management of the Home. The latest improved methods of educating the children for useful lives has been put into use and the central idea is to keep abreast of the times in matters of this kind. Nothing has moved or disturbed our progress during the year except on the 21st day of January, 1908, we were called upon to mourn the loss, by death, of our beloved superintendent, Col. A. H. Graham, who had served us so long and well. After choosing, as his successor, Dr. W. T. Stott, Franklin, Indiana, we have moved steadily forward with our work; and in review of the year's work, we are satisfied with what we have accomplished, and enter upon the new year with renewed energy. The Board of Trustees, as now organized, is George W. Duncan, President; Luther Short, Vice-President; Laura A. Cumback, Secretary; Hugh Dougherty, Treasurer.

The buildings are kept in good repair and insured up to the limit of the appropriation for that purpose. We have erected and completed the new Coal House within the appropriation of \$3,100.

We have purchased our coal for the year at \$2.20 per ton, f. o. b. Knightstown, Indiana, from the Sunday Creek Coal Company of West Virginia.

HOSPITAL, LOOKING NORTH.

PUBLIC ROADWAY IN FRONT OF HOME GROUNDS

We have used the appropriation made for fencing on the farm which makes it, in that respect, in fair condition. More could have been used to good advantage.

We refrain from going into details of the departments from the fact that the reports of the Superintendent and officers do that. These reports are attached hereto and are made a part hereof. We saw that our appropriations were running short, and the Board abolished the office of Librarian and assistant dining-room matron, and reduced other salaries, so we could live within the appropriation.

The morals of the institution are good and are persistently maintained. The health has been exceptionally good; but few casualties, and two deaths.

We congratulate ourselves that we have been so favorably blessed during the year. •

All of which is respectfully submitted.

GEO. W. DUNCAN, President.

LUTHER SHORT, Vice-President.

LAURA A. CUMBACK, Secretary.

HUGH DOUGHERTY, Treasurer.

Respectfully submitted,

HUGH DOUGHERTY,
Treasurer.

SUPERINTENDENT'S REPORT.

To the Honorable Board of Trustees:

I herewith submit the thirtieth annual report of the Indiana Soldiers' and Sailors' Orphans' Home for the fiscal year ending September 30, 1908. The first thing to be recalled is the death of the former Superintendent, A. H. Graham, who passed away January 21st last. He had been in the service of the Board for a long period—seventeen years—and his efficiency was as marked as his service was long. The present Superintendent was elected February 8th last, and what has been the measure of his efficiency, it must be left to you to judge. There were some difficult problems to be solved, such as radical retrenchment, that we might close the year without appealing for more funds; filling the places of several teachers who had resigned; and setting a higher standard for the personal worth of those connected with the Home as employes. As to all these tasks there has been at least reasonable success. We closed the year inside of our appropriations, and the vacancies in the teaching force have been filled. The efficiency of the work in general in the Home is up to the standard set in the past.

In the subjoined table herewith presented may be noted the changes in population for the past ten years:

YEARS.	En-rolled.	Ad-mitted.	Dis-charged. Age Limit.	Dis-charged. Re-quest of Friends.	Dis-charged, for Absence.	Dis-charged, by In- denture.	Sent to Refor- matory.	Deaths	Remain- ing Sept. 30.	Average Daily Attend- ance for Year.
1899.....	638	120	74	28	9	4	2	3	639	583
1900.....	639	115	75	21	5	5	5	641	393
1901.....	641	87	61	29	2	6	630	581
1902.....	630	106	84	32	4	12	2	602	563
1903.....	602	90	70	32	16	2	572	527
1904.....	572	73	45	11	8	4	577	514
1905.....	577	62	70	24	3	6	4	532	491
1906.....	532	74	67	13	5	8	3	510	456
1907.....	510	40	54	15	4	2	2	473	444
1908.....	473	52	48	7	5	6	1	2	456	417

Health.

The year just closed has been marked by good health in general—quite above the average outside the Home. As to matters more in detail you are referred to the report of Dr. O. E. Holloway, M. D., the Home Physician.

The Schools.

These are a large factor in the mental and moral awakening of the children of the Home; and when a child reaches respectable grade in his studies and in his industrial activities there is ground for the hope that he will become a valuable and desirable citizen of the State, and member of society. As is probably well known, the schools are a part of the public school system—the same grades are maintained and the same text used.

Upon the resignation of Miss Francis L. Banta as Principal last June, Miss Annie L. Duncan was chosen Principal; and the several vacancies caused by resignation were filled. Miss Duncan's report of the schools will give further information as to the condition and work of education.

The Industries.

The following departments are maintained: Farming, gardening, floriculture (including care of lawn and greenhouse), printing, shorthand and typewriting, carpentering, engineering, paperhanging and painting, tailoring, sewing, baking, laundering and cooking. Pupils enter upon these various trades when they reach the age of thirteen. The following table gives the number of children in the various industries during the past year:

	<i>Boys.</i>	<i>Girls.</i>
Farming	9	..
Gardening	5	..
Floriculture	17	..
Engineering	2	..
Printing	26	..
Carpentering	19	..
Painting and paper hanging.....	6	..
Tailoring	9
Sewing	33
Laundering	4	11
Cooking	16
Shorthand and typewriting.....	8	12
Bakery	12	..

SPRING VALLEY.

ST. LOUIS

LINCOLN HALL.

The Library.

This contains four thousand volumes, and the reading table is supplied with more than a score of papers and magazines. The annual appropriation for the library is three hundred dollars. Among the books added last year was Rhodes' History of the United States, especially covering the period of the Civil War, and Proceedings of the National Charities Convention from 1900 to date, including index of same.

In the future the Library will need a good many books of reference, such as will be helpful in preparing papers and reports, and children's books should be of a higher standard of literary excellence than some of those purchased hitherto.

Finding Homes.

The Agent is employed in finding suitable homes for children; when such a home is found the child passes out by either age limit or by indenture, but no child is sent to a home where the whole surroundings are not good, nor allowed to remain if it be afterwards found that the surroundings are bad. During the present year fourteen children have been placed in homes.

Visiting Committees.

During the year the Home has been favored with the visit of members of committees as follows: Board of State Charities, Grand Army of the Republic, Woman's Relief Corps, Sons of Veterans and Ladies' Auxiliaries of both G. A. R. and Sons of Veterans.

Improvements.

As there had been no bids for the construction of the coal house addition, the Board undertook the work; and by the time the fiscal year ended the work was very near completion. The fence fund has allowed the construction of several lines of wire fence, and the inclosing of most of the Home grounds proper, with a fence made of cement posts and two-inch iron pipe.

Religious Opportunities.

Sunday school is held each Sunday morning at 10 o'clock; a sermon or address is given at 2 p. m., and the Christian Endeavor Society conducts services on Sunday evenings.

During the coming year a Bible study class will be conducted in the interest of teachers, employes and any others who may care to attend.

Conclusion.

Besides the annual report, monthly and quarterly reports are made to the Board of State Charities, and monthly reports to the Board of the Home.

Hereafter the children who have completed the prescribed course in any one of the industries shall be entitled to a certificate, and the name and course shall be announced on Commencement day.

The Superintendent has abundant reason to mention the uniform courtesy extended to him by all connected with the Home—officers, employes and children.

W. T. STOTT,
Superintendent.

REPORT OF SCHOOLS.

To Dr. W. T. Stott, Superintendent:

Having assumed the principalship of the Home schools only one month prior to the close of the fiscal year, it is not possible for me to give a full report of the school work previous to that time.

The constant aim of the institution is thorough and systematic work, that in its results will compare favorably with that done in any elementary school of the State. The immediate application the pupil must make of all his attainments, upon leaving the Home, necessitates keeping in view the most practical side of education; at the age of thirteen he enters a special industrial training besides that of the regular school.

The outline of the course of study for the Kindergarten and eight grades is substantially the same as that used throughout the public schools; the Indiana text books are used.

The ninth grade, the finishing year of the school course, includes algebra, civil government, physical geography, English, comprising rhetoric, composition and literature; music, drawing, and a review in arithmetic. The pupils completing this course are presented with diplomas at the close of the year.

Special courses are given in stenography and typewriting, in domestic science, and in music and drawing.

During the year appropriate patriotic and various other exercises and entertainments were given.

Commencement exercises beginning June 21 and closing June 25, 1908, consisted of the following:

Program.

Class Address by Superintendent of Public Instruction, Fassett A. Cotton.

Music.

Planting of Class Tree.

Band Concert.

Alumni Business Meeting.

Graduating Exercises.

Base Ball Game.

School Exhibits.

Lawn Entertainment—

“Queen Nobody from Nowhere.”

Patriotic Drill.

School Entertainment—

“Bibi: A Comedy of Toys.”

A class of twenty-six was graduated June 25th. Following is the list of the class and their themes:

Resolved: “That America’s Glories Outweigh Her Dishonors.”

Affirmative: Unie R. Hughes and Albert Stich.

Negative: Martha Kitts and Lena Smith.

The University of Hard Knocks.....	Daniel A. Wiars
Girls from Dickens.....	Clare J. Johnston
Legends of Flowers.....	Mary L. Howard
Hawthorne and Irving—A Comparison.....	Margaret Davis
The Panama Canal.....	Garfield Hankins
American Art.....	Bethel E. Schofield
The Panic of 1907.....	Glenn L. Mitchell
Now.....	Alva Bowman
The Triumph of Promptness.....	Ruth A. Eskirdge
Blue Sky Philosophy.....	Florence D. Staley
The Patriotic Songs of the Nations.....	Anna R. Miller
History of the Class of 1908.....	Cora Mae Ray
Planting Response.....	George W. Trowbridge
Class Prophecy.....	Josephine Ransom
Who Are the Patriotic?.....	Howard Hill
Beethoven and Mozart.....	Marie E. Finney
Woman’s Gift to Literature.....	Kyle B. Bennett
Enthusiasm.....	Carl C. Butcher
Indiana’s Natural Resources.....	Harry Ream
Is Personal Beauty a Boon to the Possessor?.....	Mabel Irene Finney
Talented Men.....	Fred T. Steele
Action Determines Structure.....	Oliver P. M. Perkins

Certificates of proficiency from the department of Domestic Science were given to Josephine Ransom, Fannie Goodwin, Mary Howard, Martha Kitts, Margueritte Green,

Lena Smith, Nellie Gilliland, Margaret Davis, Lena Thornton, Ruth Eskridge, Florence Staley, Cleo Purdy, and Ruth Morgan.

The schools reopened September 8, 1908. The list of teachers includes eleven grade teachers and three in the special departments. The enrollment corresponds to the enrollment of the Home, with the exception of a few children who have not yet attained the age for Kindergarten.

The work of organizing has proceeded satisfactorily. Good interest and a responsive spirit is shown on the part of teachers and pupils, and earnest co-operation on the part of employes.

Supplies necessary for the school work have been furnished promptly.

With grateful acknowledgment for all courtesy shown to me, this report is

Respectfully submitted,

ANNIE L. DUNCAN.

STATISTICAL SUMMARY FOR THE YEAR 1908.

Population.

	<i>Male.</i>	<i>Female.</i>	<i>Total.</i>
Number of inmates present at beginning of fiscal year	265	208	473
Number received during the year.....	27	25	52
Number discharged or died during the year.....	39	30	69
Number at end of the fiscal year.....	253	203	456
*Daily average attendance (i. e., number of inmates actually present) during the year.....	232	181	413
Average number of officers and employes during the year	24	62	86

Expenditures.

Current expenses—

1. Subsistence	\$47,508 71
2. Employes	30,109 75
3. Clothing	8,821 18
4. Office, domestic and outdoor expenses.....	8,425 08
<hr/>	
Total	\$94,864 72

Extraordinary expenses—

1. Permanent improvements	\$10,584 34
2. Ordinary repairs	4,994 53
3. Officers' salary and agent's fund.....	4,576 72
4. New buildings	2,618 34
<hr/>	
Total	\$22,774 40
<hr/>	
Grand total	\$117,639 12

*Our daily average attendance is reduced on account of absence during the summer vacation.

REPORT OF THE FINANCIAL OFFICER.

*To the Honorable Board of Trustees of the
Indiana Soldiers' and Sailors' Orphans' Home:*

I have the honor to submit the following report of receipts and disbursements for the fiscal year ending September 30, 1908. Also roster of employes connected with the institution during said year, kind of service rendered and amount paid each.

H. H. WOODS,
Financial Officer.

PHYSICIAN'S REPORT.

*To the Superintendent and Board of Trustees of the
Indiana Soldiers' and Sailors' Orphans' Home:*

I am pleased to report that the past year has been one of exceptional good health with the inmates of the Home.

We have fortunately escaped any of the contagious or infectious diseases. This is due, in a great measure, I am sure, to the strict and immediate quarantine against any infected locality in the State. It is our invariable rule to allow no child or employe to visit their homes, either for vacation or other causes, when the State Board of Health has reported any contagious diseases in that particular locality; neither are children received from such infected localities without first passing through the quarantine hospital. Usually upon the return of the children from their summer vacation we have a few cases of fever, either typhoid or malarial, the result of exposure while at their homes. This year we have escaped even this.

We have had to treat one case of typhoid fever of local origin. This was so unusual that for a time we feared the infection might be on the Home grounds, and that other cases would follow. A thorough inspection was made without the discovery of a cause, and as there were no other cases we are forced to the conclusion that the infection was from some outside source.

We have continued the plan of caring for the very young and delicate children in the hospital building. We are thus enabled to give them better care as to diet, and their general health, and allow them greater liberties regarding their coming and going, than they could possibly enjoy under the rules and regulations necessary in the division rooms.

The sanitary condition of the Home and its surroundings is excellent and every care is exercised to maintain it so.

I am pleased to report that no death has occurred in the Home during the past year.

To the officers, nurses and governesses of the Home, I am under many obligations for aid and assistance extended to me.

Respectfully submitted,

O. E. HOLLOWAY,
Physician.

GENERAL INFORMATION.

How to Secure the Admission of Children to the Home.

When it is desirous to secure the admission of a child to the Indiana Soldiers' and Sailors' Orphans' Home, blank application papers may be obtained for the purpose by addressing the Superintendent.

These are to be filled out in accordance with the instructions given and to be returned to the Superintendent. At the meeting of the Board of Trustees next after applications are received, they will be submitted for approval or rejection. In either event, official notice will be given by the Superintendent as to the action of the Board of Trustees, and if the action thereupon has been favorable, the date will be fixed on which the child may be brought to the Home.

No fund has been provided for defraying the railroad expenses of children that have been admitted to the Home. If friends have not the means aid can generally be obtained from the township trustee or the county commissioners.

A family relative is allowed to visit the children once every six months, and to remain twenty-four hours on each visit.

Children may be taken away during vacation, but the Home can not bear any part of the transportation expenses, and they must be returned in due time to enter school at the opening of the session.

Whenever parents desire to take permanent custody of their children, application for discharge, in writing, should be made through the Superintendent to the Board of Trustees.

Laws Governing the Admission of Children.

Section 9. The Trustees and (under regulations and a form of application which they shall prescribe) the Superintendent are authorized and required to receive, as pupils of the Indiana Soldiers' and Sailors' Orphans' Home, orphans and children residing in this State, under the age of

sixteen years who may be destitute of the means of support and education, in the following order:

First. Orphans, children of such deceased Union soldiers or sailors in the army or navy of the United States in the late Civil War, or in the war with Spain, or in the war in the Philippine Islands, said orphans not having mothers living. If there be not applications for the admission of persons of this class sufficient to fill the Home, then there shall be in like manner admitted:

Second. Orphans, children of such deceased soldiers and sailors, said orphans having mothers living. If there be not applications for the admission of persons of said two classes sufficient to fill said Home, then, in like manner, there shall be admitted:

Third. Children of permanently disabled or indigent soldiers or sailors of said service, residing in this State, or in National Military Homes, having been admitted thereto from this State.

All children admitted to said Home, as pupils thereof, shall be supported and educated therein until they shall be sixteen years of age, unless, for good cause, sooner discharged. Any of said pupils who, by reasons of physical disability or any other cause, may be, in the judgment of said Board, unable to earn a livelihood, shall be retained as pupils of said Home, until they shall be eighteen years of age.

Section 10. Each county in this State shall be entitled to have in said Home a number of pupils proportionate to the number of soldiers furnished by it to the Union service in said war, which proportionate number shall be fixed by said Board according to the capacity of said Home. Applicants from a county already having its full quota in said Home shall be admitted, if the Home shall not be filled at the time of making application; but in the admission of applicants, when all applying can not be accommodated, preference shall be given to those from counties not having in the Home as many pupils in proportion to their quotas, as fixed by said board, as other counties from which applications may be pending shall have therein.

RULES GOVERNING THE HOME.

For the information of the public, and those personally interested, the rules governing the Home are inserted:

1. All employes are under the supervision of the Superintendent, and must give implicit obedience to his orders.

2. In the absence of the Superintendent, the Financial Officer will be in full charge, and obedience to his orders is required.

3. The Superintendent is responsible for the proper use, care and disposition of the property belonging to the Home, and for the due administration of its affairs, but the hearty co-operation of all officers and employes is expected, and a ready and cheerful compliance with all orders and regulations is required.

4. No one will be knowingly employed or continued in service who does not possess the necessary qualifications or fitness for the particular duties to be performed.

5. Cordiality of feeling among the employes is the basis of co-operation, hence no one will be continued in service who can not heartily unite with all for the good of all.

6. Any fact prejudicial to the moral character or standing of any officer or employe coming to the knowledge of another should at once be communicated to the Superintendent, but espionage, tattling and talebearing are forbidden.

7. Governesses, teachers and heads of departments must acquaint all under their charge with the rules and regulations of the Institution, and will be held accountable for the efficient and faithful performance of the duty that devolves upon them respectively.

8. No case of discipline must be referred to the Superintendent, unless beyond the control of the governess. Corporal punishment may be administered when other remedies have failed, but excessive punishment is not to be inflicted at any time. Children deprived of their play hours as a penalty shall be entitled to the liberties of the other children on all intervening holidays and Sundays.

9. It shall be the duty of every officer and employe to report to the governess of the child any misdemeanor or irregularity of conduct coming to their knowledge, and such information must be received and given in a spirit of kindness, and with a view to the best interests of the Institution.

10. Under no circumstances will an employe be allowed to apply to the children any language or epithet calculated to irritate, humiliate or degrade them. No rough expressions or slang phrases must be employed; but, on the other hand, a correct and discreet use of the language in the presence of the children must be observed.

11. The head of each department shall see that the industry conducted by him is taught and practiced in a thorough and comprehensive manner, so that each pupil shall obtain, as far as possible, a practical

knowledge of the same in all its parts. He shall be at his post of duty at the beginning of business hours, preserve good order among its pupils, and secure close and constant application to the work in which they are engaged.

12. Smoking upon the grounds or in the presence of the children is strictly forbidden.

13. Employes are expected to attend Sunday services. Habitual neglect of this duty, will be regarded as a lack of proper interest in the religious training of the children under their care.

14. Leave of absence will be granted by the Superintendent, or the Financial Officer when the Superintendent is not present.

15. In urgent cases relief from duty will be granted.

16. In cases of severe illness, or death of relatives or friends, a reasonable leave of absence will be granted.

17. In case of absence on the part of an employe, a substitute satisfactory to the Superintendent must be provided.

Hours.

18. All persons residing in the Institution are expected to be in their rooms by 10 p. m., at which hour the building will ordinarily be closed.

19. Lights in private rooms, dormitories and division rooms must be extinguished at 10 p. m., except by special permission.

20. Ladies may receive gentlemen in the public parlor, which will be open to the public use until 10 p. m. Except in the case of relatives, ladies will not entertain gentlemen in their private rooms or division rooms. When ladies are apprised of the coming of gentlemen, the Superintendent or Matron must be informed and consent obtained.

21. Wilful violation of the foregoing rules will subject the offender to a forfeiture of position.

Visitors.

22. Are heartily welcome, and all employes are required to show every possible courtesy to all persons who may wish to pass through the various buildings and about the grounds of the Institution.

23. Visitors are not allowed to go through the buildings without an attendant.

24. The buildings will be open to visitors every day in the week except Sunday.

REPORT OF THE BOARD OF TRUSTEES

INDIANA STATE PRISON,
MICHIGAN CITY, IND., September 30, 1908.

To the HONORABLE J. FRANK HANLY, Governor:

Sir—The Board of Trustees of the Indiana State Prison submit their annual reports for the periods of time as follows: From November 1, 1906, to September 30, 1907, being eleven months, and from October 1, 1907, to September 30, 1908, one year. Also the reports of the Warden and the officers in charge of the several departments of the prison, and we hereby make the reports of the Warden and all the subordinate officers a part of our report herein.

Physical and Sanitary Conditions.

The physical and sanitary conditions of every department of the Institution are satisfactory, except the sanitary condition of the north and south cell houses is not what the Board would desire. These cell houses were constructed many years ago, when little attention, if any, was given to sanitary matters, and for that reason both are defective in this, to wit: The cells are too small, poorly ventilated and entirely without plumbing, and the cell houses are improperly lighted.

The overcrowded condition of the Institution requires the management in many instances to place two prisoners in a single cell. This overcrowding is dangerous to the health of the prisoners and detrimental to the discipline of the prison, and ought to be remedied.

Discipline.

The discipline of the prison is excellent, and all the officers are courteous and gentlemanly in their treatment of the prisoners. The Board indorses and commends the efforts of the Warden and the subordinate officers in the matter of management and discipline.

Parole of Prisoners.

We indorse the indeterminate sentence law. After a thorough test, we are of opinion that it is fair to the State of Indiana and helpful to the prisoners. Of the men paroled, seventy-five per cent. have observed the stipulations under which they were released. The careful supervision by the State has proven very beneficial to the paroled prisoners.

Prison Labor.

As all contracts for prison labor will expire by law prior to the meeting of the legislature in January, 1911, it will become the duty of the legislature that is to meet in January, 1909, to make provision by statute for the employment of prisoners. It is imperative that they have work, as idleness will lead to physical, mental and moral degeneracy.

Improvements.

In the period comprising this report, the following buildings have been erected:

A new cell house containing 230 cells has been constructed of brick, steel and concrete. The lighting, ventilating and sanitary conditions of this building are perfect in every detail.

A new chapel has been built. This church in the prison grounds will have a very beneficial effect on the morals of the prisoners. The building is modern and up-to-date in all its arrangements.

A new wall has been completed, enclosing an additional ten acres. This wall is substantial and safe in its construction. The acreage added to the enclosure will be of great benefit to the health of the prisoners and helpful to the sanitary condition of the buildings. Sufficient territory has been enclosed to provide sites for all buildings that will be required within the walls in the future.

Binder Twine Industry.

This industry has given employment to sixty-six prisoners daily in manufacturing binder twine, and the results have been reasonably satisfactory. While the earnings of the plant have not been as large as the Board anticipated, due to competition and the unsettled condition of the sisal market, yet the Board points with pride to the fact that since the creation of this industry in the State, there has been a marked reduction in the price of twine per pound, and thereby a saving of several hundred thousand dollars made in this item alone to the consumers in Indiana.

Appropriations.

The Board has examined the report submitted to the Legislative Visitation Committee, and indorses the recommendations for the appropriation of money to construct an addition to the north cell house, and also for a new factory building.

The appropriations for maintenance and specific purposes asked for have been carefully considered, and we are of the opinion that they should be made by the legislature.

Criminal Insane.

There are now confined in the prison about 170 prisoners who are defective mentally. Many of these unfortunates are insane, and being criminal in their nature, their retention in this Institution is a matter of great danger to the lives of the officers and the other prisoners and detrimental to discipline. This Institution is not provided with a proper building for the care and custody of this class of prisoners, and some immediate provision should be made by the State for the erection of a building here or in connection with some other State institution, where these criminal insane may be treated and cared for in a proper manner.

Conclusion.

We submit this report and bespeak for it such consideration as in your judgment it may deserve.

It is our opinion that the administration of the affairs of the Indiana State Prison and the conduct of the officers connected therewith has been eminently fair and satisfactory during the period herein covered.

Respectfully submitted,

PATRICK O'BRIEN,
HERBERT R. KOFFEL,
MICHAEL E. FOLEY,
DAVID A. COULTER.

Board of Trustees.

WARDEN'S REPORT

WARDEN'S OFFICE,
INDIANA STATE PRISON,
MICHIGAN CITY, IND., September 30, 1908.

To the Honorable Members of the Board of Trustees:

Sirs—I submit the annual reports of the Indiana State Prison for eleven months, November 1, 1906, to September 30, 1907, and twelve months, October 1, 1907, to September 30, 1908, concerning the discipline, financial statistics, health, sanitary and moral conditions and parole data.

I express sincere thanks to the Board of Trustees for the support given me, and for the spirit of kindness so generously shown in our personal and official relations.

To the officers and employes of the Institution I extend my thanks, and give hearty commendation for loyal assistance and the manner in which they have performed their respective duties.

Respectfully submitted,

JAMES D. REID,
Warden.

DEPUTY WARDEN'S REPORT

DEPUTY WARDEN'S OFFICE,
INDIANA STATE PRISON,
MICHIGAN CITY, IND., September 30, 1908.

To the Honorable James D. Reid, Warden:

Sir—I herewith submit my report on the discipline of the Institution for eleven months, beginning November 1, 1906, and ending September 30, 1907, and the year ending September 30, 1908.

STATISTICS.

Eleven Months Beginning November 1, 1906, Ending September 30, 1907.

Number of men present November 1, 1906	950	
Number received during eleven months	277	
Total		1,227
Number discharged, died or otherwise left		165
Number remaining September 30, 1907		1,062
Daily average attendance		1,017.784
Average number of officers and employees		57

Expenditures.

Current Expenses:		
1. Salaries and wages		\$42,860 7
2. Clothing		5,746 02
3. Subsistence		32,151 67
4. Ordinary repairs		4,582 95
5. Office and outdoor expenses		37,330 23
Total		\$122,671 84
Extraordinary Expenses:		
1. New buildings		\$52,410 79
2. Permanent improvements to existing buildings		5,216 19
Total		\$57,626 98

Recapitulation.

Current expenses	\$122,671 84
Extraordinary expenses	57,626 98
Grand total	\$180,298 82

Notes on Current Expenses:

1. Salaries and wages include salaries of Board of Trustees.
2. Clothing includes shoes and also materials for clothing and shoe manufacture in the Institution.
4. Ordinary repairs include all of those which simply maintain the buildings in condition without adding them. All repairs in the nature of additions are classed as "permanent improvements."
5. This item includes everything not otherwise provided for, e. g. furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.

Summary.

Disbursements of Maintenance and Specific Appropriations made by the
Legislature during year ending September 30, 1908.

FUND.	Disbursement.	Reverting to Treasurer.	Appropriation.
Maintenance.....	\$105,570 00		\$105,570 00
Ordinary repairs and improvements.....	4,998 39	\$1 61	5,000 00
Discharged prisoners.....	3,990 33	9 67	4,000 00
Paroled prisoners and supervision.....	6,484 29	15 71	6,500 00
Criminal insane.....	2,880 00		2,880 00
Special library.....	499 55	45	500 00
New cell house.....	5,456 29	09	5,456 38
New chapel.....	4,375 97		4,375 97
Wall extension.....	25,085 95		25,085 95
Displacement pump.....	2,987 34	180 14	3,167 48
Lighting system.....	1,890 36	97	1,891 33
Binder twine plant.....	156,580 40		156,580 40
Maintenance, per capita.....	20,342 95	11 16	20,354 11
Total.....	\$341,141 82	\$219 80	\$341,361 62

Recapitulation.

October 1, 1907, to September 30, 1908.

DEBITS.	Amount.
Receipts and earnings.....	\$79,508 18
Appropriations for maintenance.....	125,912 95
Specific appropriations.....	58,648 47
Total.....	\$164,069 60
CREDITS.	Amount.
Receipts and earnings paid Treasurer of State.....	\$79,508 18
Receipted vouchers filed with Auditor of State, expenditure of maintenance appropriation.....	125,912 95
Receipted vouchers filed with Auditor of State, expenditure of specific appropriations.....	58,648 47
Total.....	\$164,069 60

STATISTICS.

Showing Population and Expenditures from October 1, 1907, to September 30, 1908.

POPULATION.		1908.
Number of men present October 1, 1907.....	1,062	
Number received during the year.....	324	
Total.....		1,386
Number discharged, died or otherwise left.....		258
Number remaining September 30, 1908.....		1,128
Daily average attendance.....		1,095.125
Average number of officers and employes.....		59

Expenditures.

Current expenses:	
1. Salaries and wages.....	\$58,379 50
2. Clothing.....	6,003 47
3. Subsistence.....	39,201 28
4. Ordinary repairs.....	4,998 39
5. Office and outdoor expenses.....	36,182 87
Total.....	\$144,765 51
Extraordinary expenses:	
1. New buildings.....	34,918 21
2. Permanent improvements to existing buildings.....	4,877 70
Total.....	\$39,795 91

Recapitulation.

Current expenses.....	\$144,765 51
Extraordinary expenses.....	39,795 91
Grand total.....	\$184,491 42

Notes on Current Expenses:

1. Salaries and wages include salaries of Board of Trustees.
2. Clothing includes shoes and also materials for clothing and shoe manufacture in the Institution.
4. Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. All repairs in the nature of additions are classed as "Permanent Improvements."
5. This item includes everything not otherwise provided for, e. g. furniture, bedding, laundry, supplies medicines, engineer's supplies, postage, freight, library, etc

CONCLUSION.

I thank you for your kind interest, and fully appreciate the advice and assistance given me.

Respectfully submitted,

WALTER H. DALY.

Clerk.

PHYSICIAN'S REPORT

PHYSICIAN'S OFFICE,
INDIANA STATE PRISON,
MICHIGAN CITY, IND., September 30, 1908.

To the Honorable James D. Reid, Warden:

Sir—Concerning the Medical Department of this institution, I have the honor to make the following report for the fiscal periods ending September 30, 1907 and 1908.

NOVEMBER 1, 1906, TO SEPTEMBER 30, 1907.

For the Eleven Months Ending September 30, 1907, the sanitary condition of the entire Institution has been excellent. The food has been good and the water pure.

There has been no typhoid fever, and practically no dysentery. A mild epidemic of "grip" in the winter, and an unusual number of cases of muscular rheumatism during the cold damp spring have been the most marked exceptions to the general good health.

The following tables are based on a total population of 1,223, with a daily average of 1,017.7.

Summary of Hospital Record from November 1, 1906, to September 30, 1907.

ITEM.	November.	December.	January.	February.	March.	April.	May.	June.	July.	August.	September.	Total.	
Number in hospital November 1, 1906												25	
Number in hospital on 1st of month.	25	25	26	25	26	27	28	27	28	27	29		
Number admitted each month.	10	11	4	11	12	8	8	12	12	13	7	108	133
Number discharged each month.	7	10	4	8	6	7	8	10	10	11	6	87	
Number of deaths each month.	3		1	1	5		1	1	3		1	16	
Number of executions.				1								1	104
Number in hospital September 30, 1907.													29
												Average for Year.	
Average number in sick line.	15.9	17.9	20.4	20.5	22.2	29.2	20.2	24.6	20.3	19.2	21.3		21.1
Average number in sick cell.	1	2.2	3.2	0.5	2	3.8	2.4	3.4	1.2	3.4	1.6		2.3

Within the period there were 16 deaths; three of them due to accident. One man jumped or fell from one of the ranges, dying in two hours, and two others fell on account of a plank on which they were working giving away, and were killed instantly. In each case the coroner was called, whose verdict exonerates the Institution. Two deaths were due to tuberculosis, better provisions for the early care of which cases becomes more and more pressing.

A slight increase in the insane and defective population has occurred.

OCTOBER 1, 1907, TO SEPTEMBER 30, 1908.

For the Year Ending September 30, 1908, the general hygienic conditions of the Institution have continued excellent, and cleanliness has prevailed throughout.

The food has been abundant and good. The drinking water has been frequently examined at the laboratory of the State Board of Health and, with one exception, it was found good. In February extensive ice floes in this end of the lake and adverse winds caused contamination of our supply, by sewage from the harbor, "Colon bacilli" being found in one sample taken from the pumphouse. I express to the State Board of Health my sincere appreciation of the cordial assistance rendered.

The general health has usually been good, and the number of acute diseases small; the most marked exception being a series of "grip" cases in February. No epidemic due to local conditions has occurred.

Although the hospital has been kept full all the time, many of those cared for have been senile or chronic patients. Following the water contamination noted above, one mild case of typhoid developed in March; this and one other in 1894 are all that the records show as having originated in the Institution within the past fourteen years—both recovered.

The following tables are based on a total population of 1,387, with a daily average of 1,095.1.

Summary of Hospital Record from October 1, 1907, to September 30, 1908.

							Poor.	Senile atheroma.	Sept. 4, 1908.		10	6

In the past year an unusual number of deaths has been due to tuberculosis; fatalities from this cause being especially numerous following the "grip" epidemic of February. Outside of this one cause, the death rate has been low.

Attention is called to the fact that although the colored prisoners comprise less than one-fifth of our population, yet for the past two years they have furnished one-half of the deaths from all causes, and nearly two-thirds of those resulting from tuberculosis. Better equipment for the early care of tubercular cases is urgently demanded. The recommendations of two years ago concerning a third story and a flat roofgarden on the hospital are again emphasized; this improvement in connection with the recently increased wall area, would be of the greatest value in combating the disease.

The Defectives.

At present 170 prisoners are considered clearly defective—about 15 per cent. of the population, classified and located as follows:

ITEM.	Insane Ward.	General Hospital.	Cell House.	Working.	Total.
Insane.....	40	4	24	20	88
Feeble-minded.....	1		2		3
Epileptics.....	1		6	16	23
Giving a history of epilepsy.....				8	8
Border-line cases.....			3	45	48
Total.....					170

The following list of defectives, admitted during the past two years, indicates the rate at which this class is reaching the Institution:

Insane on admission.....	6
Insanity developed since admission.....	5
History of having once been insane.....	11
Epileptic.....	5
Epileptic history.....	5
Border-line cases.....	11
Total.....	43

While conducting the medical examination of prisoners on admission, careful inquiry has been made to ascertain the sociological condition, and those were classified as "Tainted" who admitted previous crimes or a marked mental defect, either in the personal or family history.

The number of men examined.....	523	
Total number giving a tainted history.....	281	53.7%
Giving a personal or family history showing mental defect.....	166	31.7%
Giving a family history showing mental defect (usually insanity or epilepsy—frequently several cases).....	144	27.5%
Giving a personal history of previous conviction for crime.....	161	30.7%
Giving a history of mental defect and previous conviction for crime.....	53	10.1%
Giving a history of criminal relatives.....	30	5.7%
Giving a history of one or more relatives in some state Institution (not penal).....	65	12.4%

The above facts compel the following conclusions:

Many of the men admitted are inherently defective; being defective they are not safely parolable, and for that reason their number here will increase in the future, as it has in the past. For the best interest of all concerned they should be entirely separated from the other prisoners. The present equipment of this Institution does not permit such classification; conditions are already urgent and will become more so in the future.

The question how to care for these insane and defectives is not especially complex or difficult, if proper equipment is provided. This provision, it is earnestly hoped, the coming legislature may in its wisdom see fit to make, either in connection with this or some one of the other State institutions.

Provision should also be made for the indefinite detention of the insane or defective prisoner, after the expiration of his maximum sentence; all we can do now is to send him back to the county whence he came. Such a person, irresponsible and unable to care for himself, should not be cast adrift again to lapse into crime; to so discharge him is not only a crime against society, but a crime against a criminal.

In conclusion it is a pleasure to be able to acknowledge, in no merely perfunctory manner, but with a sincere feeling of appreciation, the encouragement and ready co-operation that has been extended me by you, the officers and employes in all departments of the Institution.

Respectfully submitted,

JAMES W. MILLIGAN.

Physician.

CHAPLAIN'S REPORT

CHAPLAIN'S OFFICE,
INDIANA STATE PRISON,
MICHIGAN CITY, IND., September 30, 1908.

To the Honorable James D. Reid, Warden:

Sir—I herewith submit to you my report as Chaplain of this Institution for the eleven months ending September 30, 1907, and year ending September 30, 1908.

From the beginning of this period until Christmas day, 1907, no mass meeting of the prisoners was possible, because of the fact that the new chapel was building. Until that date the work of the Chaplain was wholly of a personal nature among the men.

The first service was held in the new chapel on the day mentioned, December 25, 1907, and since that date chapel services have been conducted regularly. The splendid new building has contributed much to the value of the religious services. The building is adequate for our needs, it is churchly in appearance, and its beauty and dignity add to the effectiveness of our equipment for moral and religious instruction. It is a strong testimony that the State believes in the emphasis of moral and religious instruction as a part of the vital work of reform when it provides so good a building for the assembly of prisoners in services for religious worship.

In addition to the usual services conducted by the Chaplain, splendid addresses have been given by Hon. M. E. Foley, of Crawfordsville, the Rev. W. G. Puddefoot, of Indianapolis, and Hon. James F. Gallaher, of Michigan City. Messrs. O. E. Excell and C. E. Gabriel, of Chicago, conducted a song service on February 23d, which was a delight and help to all, and in the Decoration Day observance we were assisted by the male quartette and Master Luther Kinnard, soloist, of the First M. E. Church, of Michigan City. Memorial Day, the Fourth of July and Labor Day were observed with special and appropriate services in the chapel.

The Christian Endeavor service has been regularly maintained with an average voluntary attendance of 110. A member of the Board of Trustees has commended this service as one of the most valuable connected with our work.

Every new prisoner has been personally interviewed by the Chaplain, and many other interviews have been granted. I have sought, as far as possible, a personal acquaintance with each prisoner, and in addition to visiting the prisoners in the hospital and cell houses have held personal interviews, giving encouragement, advice and instruction wherever possible, to the end that when the prisoner left the Institution by parole or discharge, it should be with the intention of becoming a worthy citizen. I am convinced that such personal work is of value to the Institution and to society, as well as to the prisoner.

A number of letters have been written to inquiring mothers, wives and other relatives of prisoners, as well as letters of encouragement to paroled and discharged men.

Each cell is provided with a Bible. The new song books purchased for the chapel have proven most satisfactory and helpful.

Since May, 1908, the Rev. Father John Bleckman of Saint Mary's Catholic Church, Michigan City, and his assistants have conducted a service in the chapel on the fourth Sunday of each month.

The following tables of statistics relative to moral, educational and other characteristics of the 523 men received during the period covered by this report may be of interest.

November 1, 1906, to September 30, 1907.

ORVILLE L. KIPLINGER,
Chaplain.

STATE AGENT'S REPORT

STATE AGENT'S OFFICE,
INDIANA STATE PRISON,
MICHIGAN CITY, IND., September 30, 1908.

To the Honorable James D. Reid, Warden:

Sir—I respectfully submit for your consideration a detailed statement of the work of the Parole Department for the eleven months commencing November 1, 1906, and ending September 30, 1907, also for the year commencing October 1, 1907, and ending September 30, 1908.

ITEM.	1906-07.	Total.	
Reporting November 1, 1906.....	129	129	
Paroled during eleven months.....	88		
Total number under care of Department.....			217
Released on parole.....	86		
Awaiting employment.....	2	88	
Total.....			217
*Returned for violation.....	22		
Violated parole and at large.....	5		
Granted final discharges.....	87		
Died on parole.....	1		
Sentence expired on parole.....	6		
Reporting monthly, September 30, 1907.....	88		
Reporting quarterly, September 30, 1907.....	6		
Awaiting employment.....	2		
Total.....			217

*Fifteen men were also returned for parole violation who were delinquent and at large previous to November 1, 1906, making a total of thirty-seven violators returned during the eleven months.

Earnings and Expenses.

Earnings of paroled men.....	\$35,393 55	
Expenses of paroled men.....	26,245 97	
Savings of paroled men.....		\$9,147 58

The following table is a recapitulation of the work of the Parole Department from the date of the granting of the first parole under the present Indeterminate Sentence Law to September 30, 1907.

Total number paroled.....			1,456
Total number of paroles revoked.....	10		
Number awaiting employment October 1, 1907.....	2		
Total number released on parole.....	1,444		1,456
*Violators—			
Returned.....	240		
Delinquent and at large.....	109	349	
Relationship discontinued—			
Discharged.....	878		
Sentence expired.....	94		
Died on parole.....	29	1,001	
Paroles revoked.....	10		
Awaiting employment.....	2	12	
Reporting monthly.....	88		
Reporting quarterly.....	6	94	
Total.....			1,456

Per cent. of violations to date, 24.16.

*Of the total number of violators who are delinquent and at large, twelve are located in other institutions, jails, etc.

Earnings and Expenses.

Total earnings of paroled men.....	\$399,717 84	
Total expenses of paroled men.....	289,972 40	
Savings of paroled men.....		\$109,745 44

Appropriation for year eleven months..... \$5,958 33
 Expended during eleven months..... 5,739 65

Reverting to Treasurer..... \$218 68
 Net expense per capita, \$20.46. Gross expense per capita, \$24.84.

STATE AGENT'S REPORT

1907-1908.

The following tables give a summary of the work of the Parole Department for the year commencing October 1, 1907, and ending September 30, 1908:

ITEM.	1907-08.	Total.
Reporting October 1, 1907.....	94	94
Paroled during year.....	141	
Awaiting employment October 1, 1907.....	2	
Total number under care of Department.....		237
Paroles revoked.....	6	143
Released on parole.....	137	
Total.....		237
*Returned for violation.....	13	
Violated parole and at large.....	10	
Granted final discharges.....	68	
Died on parole.....	1	
Sentence expired on parole.....	16	
Reporting monthly September 30, 1908.....	117	
Reporting quarterly September 30, 1908.....	6	
Paroles revoked.....	6	
Total.....		237

*Five men were also returned for parole violation who were delinquent and at large previous to October 1, 1907 making a total of eighteen violators returned during the year.

Earnings and Expenses.

Earnings of paroled men.....	\$37,690 25	
Expenses of paroled men.....	30,406 00	
Savings by paroled men.....		\$7,284 25

The following table is a recapitulation of the work of the Parole Department from the date of the granting of the first parole under the present Indeterminate Sentence Law to September 30, 1908:

Total number granted paroles.....			1,597
Total number of paroles revoked	16	16	
Total number released on parole.....	1,581		1,597
*Violators—			
Returned	258		
Delinquent and at large.....	114	372	
Relationship discontinued—			
Discharged	946		
Sentence expired.....	110		
Died on parole.....	30	1,086	
Reporting monthly.....	117		
Reporting quarterly.....	6	123	
Total.....			1,597

Per cent. of violations to date, 23.52.

*Of the total number of violators who are enumerated as delinquent and at large fifteen are located in other institutions, jails, etc.

Total Earnings and Expenses.

Total earnings of paroled men.....	\$437,408 09	
Total expenses of paroled men.....	320,378 40	
Savings by paroled men.....		\$117,029 69

Recapitulation of Suspended Sentence Cases.

Number of cases October 1, 1907.....	14		
Commitments received during year.....	69		
Total cases under care of Department.....			83
Relationship discontinued—			
Revoked and brought to prison.....	9		
Unsatisfactory.....	6		
Granted discharges.....	7	22	
Reporting monthly October 1, 1908.....		61	83
Total.....			83

Percentage of violations to date, 18.07.

In giving the above table I wish to state that all suspended sentence cases are handled in exactly the same way as are those paroled directly from the Institution. Positions are found for the men, when they have none in view, and they are visited as often as it is possible for the Parole Officer to do so with his increased duties.

Additional appropriation should be made to the Parole Prisoners' Fund to enable the Department to employ another Visiting or Parole Officer in

order that all suspended sentence cases and paroled prisoners from the Institution may receive the attention required and absolutely necessary to carry out the intent of the law and to obtain the results desired.

Earnings and Expenses of Men on Suspended Sentence Parole.

Earnings of men on suspended sentence parole.....	\$16,839 52
Expenses of men on suspended sentence parole.....	14,519 07
Savings of men on suspended sentence parole.....	\$2,320 45

The table herewith shows the work of the Parole or Visiting Officer of the Parole Department for the year commencing October 1, 1907, and ending September 30, 1908:

School.

The prison school has been conducted during six months of each year with increased attendance and interest, and many illiterates have been taught to read and write.

Library.

The library of the Institution contains four thousand books, carefully selected, arranged and catalogued. A card system record is kept of prisoners using books, and two books per week are permitted all who can read. Nine hundred and fifty-six are receiving this privilege.

Conclusion.

In conclusion, I wish to express my thanks for the advice and assistance given by you, the members of the Board of Parole and all those who have aided in the work during the period just closed.

Respectfully submitted,

F. J. HARVEY,
State Agent.

THIRTY-SEVENTH ANNUAL REPORT OF THE
BOARD OF TRUSTEES

OF THE

INDIANA WOMANS PRISON

AND THE

FIRST ANNUAL REPORT

OF THE

Correctional Department of the
Indiana Womans Prison

For the Year Ending September 30, 1908.

TO THE GOVERNOR.

INDIANAPOLIS:

WM. H. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING,
1908.

THE STATE OF INDIANA,

EXECUTIVE DEPARTMENT,

December 1, 1908.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,

December 14, 1908.

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct, except as to Maintenance, 1908, should be \$2,020.11 used from fund appropriated on account Excess Population, and \$3,539.22 provided by Governor from Emergency Fund.

Special repair, 1908, total amount expended.....	\$37,519 00
Balance reverted to treasury.....	1 00
Discharge 1907 appropriation.....	641 67
Balance reverted to treasury.....	59
Library 1907 appropriation.....	275 00
Balance reverted to treasury.....	08

JOHN C. BILLHEIMER,

Auditor of State.

December 14, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,

Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 15, 1908.

FRED A. SIMS,

Secretary of State.

Received the within report and delivered to the printer December 15, 1908.

REPORT OF THE BOARD OF TRUSTEES.

To the HON. J. FRANK HANLY, Governor of Indiana:

We, the members of the Board of Trustees of the Indiana Womans Prison, respectfully submit the following report for the fiscal year ending September 30, 1908:

The separation of the two institutions has proved as beneficial to the Womans Prison as to the Girls' School, more time and attention being given to the women, and it has resulted in better and more conscientious work and excellent behavior on their part. The discipline has been exceptionally good, they themselves taking a pride in the fact that all were striving to be first-class women. In the last six months there has been almost no punishment necessary, and what was given was of a slight order. The women recognize that they are the family now, without younger members, which seems to be an incentive to them to do their best.

Number of women enrolled October 1, 1907.....	48
Received on commitment.....	22
Returned from parole.....	3
	—
Total	25
Discharged and paroled.....	22
Died	1
Escaped	2
	—
Total	25
Remaining September 30, 1908.....	48

Income from Womans Prison—	
Laundry	\$611 29
Sewing	305 33
Miscellaneous	184 60
	—
Total	\$1,101 22

Owing to the remodeling of the west wing and the improvement of walks and walls in the yard, the women have done much extra cleaning inside the Institution, as well as the extra work outside, in addition to the regular work of the Institution.

CORRECTIONAL DEPARTMENT.

The Correctional Department was completed in January, and the first commitment of women was received on February 3rd. Up to October 1st, 92 were received, 53 white and 39 colored, from the counties of Marion, Madison, Delaware and Warrick. The courts throughout the State are now beginning to inquire about and recognize the value of this department in correctional work.

Number of women enrolled February 3, 1908.....	3
Received during period.....	92
Discharged during period.....	49
Number remaining September 30, 1908.....	43

The women are employed in the kitchen, dining room, laundry, sewing room, garden and yard. The women received in this department are of the lowest grade, and from long idleness and dissipation know little of work. It is an encouraging fact that a large majority of them strive to do their work well because they feel, as they express it, that someone is taking an interest in them.

If all women sentenced to county jails were sent to this department, and the sentence made an indeterminate one, the women would have a greater chance for permanent reformation.

NEEDS OF THE INSTITUTION.

While the past year has been one of improvement, there are still imperative needs of the Institution. The Womans Prison needs replastering, the dining room should be removed from the basement to the first floor, two rooms on the third floor, formerly used as dormitories for the girls, should be made into small rooms for the women, as now we are compelled to have two women in many of the rooms, which is undesirable. The moving of the dining room from the basement will necessitate the taking of the present laundry for that purpose. The Womans Prison is the only institution in the State deriving a revenue from laundry for the State Treasury. No other rooms being available, a new building for this laundry work should be provided. Further, for the Womans Prison, a specific fund of \$300 is needed for the library, music and Sunday School supplies.

Owing to the sharp advance in living prices our maintenance fund was exhausted, and the Governor met the deficit of \$3,539.12 from his contingent fund, we recommend the maintenance for this Institution be \$20,000; repair fund, \$3,000; discharge fund, \$1,000, and a per capita of \$150 per annum for each person present over a daily average of 68.

FINANCIAL STATEMENT.

Total appropriations, including specifics, and adding farm products (farm products, \$600.63).....	\$60,619 84
Unused appropriation.....	32

• We have returned the unused appropriations, and all our earnings, making totals as follows:

Unused appropriations.....	\$0 32
Income Womans Prison.....	\$916 62
Miscellaneous earnings.....	184 60
Total	\$1,101 22

Making to the credit of the Institution (unused appropriations and earnings).....	\$1,101 54
--	------------

Respectfully submitted,

FANNY MCKEE,
 ELLA B. MCCOY,
 ALICE E. WAUGH,
 NETTIE A. WILSON.

SUPERINTENDENT'S REPORT.

To the Board of Trustees of the Indiana Womans Prison:

Ladies—I have the honor to submit herewith my annual report as Superintendent of the Indiana Womans Prison, covering the thirty-seventh fiscal year, ending September 30, 1908.

The remodeling of the west wing, which was begun last year, was completed in January, and on February 3rd the Correctional Department was opened to receive women from the various counties of the State. From that date until the 30th of September, 1908, ninety-two women were received. There are accommodations for 100 women in this department, and it is well fitted to give them employment and instruction of a kind which will be helpful to them after they leave. The greatest drawback to the accomplishment of better work in this department is the short sentence. If they received an indeterminate sentence, the same as the women who are sent to the penal department, it would enable them to get benefits from the occupations which they cannot obtain otherwise.

Three officers are employed in this department. Every afternoon is devoted to sewing, the women making all of their own garments. Besides this they do their own laundry, and all necessary cleaning and household work.

PENAL DEPARTMENT.

We have received in this department during the year twenty-two women on new commitments, and three were returned for a violation of their parole. On September 30, 1908, we have enrolled in this department 48 women.

The year opened October 1, 1907, with.....	48
Received during the year on commitment.....	22
Returned from parole	3

Total	73
-------------	----

Discharged and paroled.....	22
Escaped	2
Died	1
	—
Total	25
	—
Remaining September 30, 1908.....	48

Of the 48 remaining, 9 are sentenced for life.

A majority of the women are employed in the laundry, where all the work which is sent in by patrons in the city is done, also the work for the officers, and all their own clothing. The earnings from this department for the year were \$611.29. Besides this work, plain sewing, quilting and embroidering are done by the women. From this source the amount received for the year was \$305.33. The garden, which is taken care of by the women, furnished most of the vegetables for the Institution during the season, besides furnishing tomatoes and other things for canning for winter use.

Each paroled woman is visited several times during the year, and they report to us once each month. We find all of them doing well. The general health of the Institution is good. One death occurred from tuberculosis during the year.

Many repairs were made, also all the painting which was necessary to keep up the appearance of the Institution to its standard. This painting was done by the women.

I wish to thank all the officers for their loyal support, as well as for their faithfulness to all work assigned them, and I wish to express to the Board my sincere thanks for their hearty co-operation and courteous treatment during the entire year.

Respectfully submittd,

EMILY E. RHOADES,
Superintendent.

REPORT OF PHYSICIAN.

To the Board of Trustees of the Indiana Womans Prison:

Ladies—The following report is respectfully submitted for the hospitals of the Prison for the fiscal year ending September 30, 1908:

<i>Month.</i>	<i>Women.</i>	<i>No. Cases.</i>	<i>Month.</i>	<i>Women.</i>	<i>No. Cases.</i>
October	21	23	April	18	20
November	25	28	May	17	21
December	30	33	June	21	27
January	20	23	July	28	30
February	31	37	August	20	20
March	30	38	September	16	17

The following diseases were treated:

<i>Disease.</i>	<i>No. Cases.</i>	<i>Disease.</i>	<i>No. Cases.</i>
Influenza	21	Insomnia	2
Pleurisy	1	Nervousness	1
Muscular rheumatism.....	16	Acute indigestion	4
Inflammatory rheumatism..	1	Chronic indigestion.....	2
Acute tonsilitis.....	10	Acute diarrhoea.....	3
Follicular tonsilitis.....	3	Biliousness	4
Chronic pharyngitis.....	3	Constipation	4
Nasal catarrh.....	3	Epilepsy	2
Acute colds.....	14	Cystitis	6
Pulmonary tuberculosis....	1	Suppression of urine.....	1
Anæmia	5	Suppressed menses.....	1
Neuralgia	3	Herpes zoster.....	2
Menorrhagia	1	Erysipelas of face.....	1
Metrorrhagia	3	Urticaria	1
Vulvo-vaginal abscess.....	4	Tenia cercinati.....	2
Specific vaginitis.....	1	Erythemia	1

Tertiary syphilis.....	2	Pediculi pubis.....	4
Chalazion of eyelid.....	1	Scabes	4
Gastritis	1	Local treatments for pelvic diseases	4
Morphinism	1		

Twenty-two women, 14 white and 8 colored, were received, and a physical examination made of each one and their history recorded. The general health has been good and only one death occurred during the year.

CORRECTIONAL DEPARTMENT.

The total number of cases treated in this department since the opening was one hundred and thirty-six. The number of women and cases treated for each month was as follows :

<i>Month.</i>	<i>Women.</i>	<i>No. Cases.</i>	<i>Month.</i>	<i>Women.</i>	<i>No. Cases.</i>
February	8	12	June	18	27
March	12	13	July	15	23
April	13	17	August	41	59
May	10	15	September	34	47

The following diseases were treated :

<i>Disease.</i>	<i>No. Cases.</i>	<i>Disease.</i>	<i>No. Cases.</i>
Whisky addiction.....	18	Hemorrhoids	2
Morphine addiction.....	3	Cystitis	1
Cocaine addiction.....	1	Vulvo-vaginal abscess.....	2
Chloroform addiction.....	1	Abscess of axilla.....	1
Cigarette addiction.....	1	Abscess of tooth.....	1
Delirium tremens.....	3	Childbirth	1
Acute colds.....	6	Insane	1
Influenza	1	Epilepsy	1
Asthma	1	Pregnancy	2
Neuralgia	3	Miscarriage	1
Rheumatism	5	Erythema of body.....	1
Nasal catarrh.....	1	Secondary syphilis.....	2
Anæmia	1	Tertiary syphilis.....	1
Chronic bronchitis.....	1	Primary syphilis.....	1
Pulmonary tuberculosis	2	Gonorrhœa	6
Burns of leg.....	1	Scabies	17
Paralysis	1	Pediculi capitis.....	24
Wounds (cuts, etc).....	4	Pediculi corporis.....	4
Fracture of ulna, radius and small finger.....	1	Pediculi pubis.....	30

Ninety-two women, 53 white and 39 colored, were received, and physical examinations of each one made. No deaths occurred.

Respectfully,

MARTHA J. SMITH, Physician.

REPORT OF SECRETARY.

To the Superintendent:

LAWS

Governing and Controlling

THE

Indiana Industrial School for Girls

AND

Indiana Womans Prison.

WOMANS PRISON—GIRLS INDUSTRIAL SCHOOL.

(1869 S., p. 61. In force May 13, 1869.)

8254. (6162.) ESTABLISHED. 1. There shall be established as soon as practicable after the taking effect of this act, at or near the city of Indianapolis, an institution to be known as the "Indiana Reformatory Institution for Women and Girls."

Diminution of time for good behavior, Sections 8238-8241.

Home for friendless women, Sections 8243-8350.

The penal department created by this act is a State prison, and the act of April, 1881, concerning public offenses and their punishment, did not repeal any of the provisions of this act. *Walton v. State*, 88 Ind. 9.

(Acts 1899, p. 22. In force February 7, 1899.)

8255. NAME CHANGED. 1. That the name of the State institution known as "The Reform School for Girls and Women's Prison" be changed. That hereafter said institution shall be, and they are hereby declared to be separate and distinct; the first of said institutions to be named and known as "The Indiana Industrial School for Girls"; the second institution to be named and known as "The Indiana Womens Prison."

8255a. LAWS APPLICABLE. 2. All laws in force respecting the said "Reform School for Girls and Womens Prison," including the management thereof, shall, as far as applicable thereto, apply and continue to these said separate institutions.

(1877, p. 64. In force March 3, 1877.)

8256. (6163.) BOARD OF MANAGERS TO BE WOMEN—BOARD OF AUDIT. 2. The general supervision and government shall be vested in a Board of Managers, consisting of three persons, who shall be women, to be known and designated as the "Board of Managers of the Indiana Reformatory Institution for Women and Girls." The members of the first Board, to be appointed under this act, shall be Mrs. Emily A. Roache, Mrs. Rhoda M. Coffin and Mrs. Eliza Hendricks, whose terms of office shall be respectively two, four and six years—said terms of office to expire in the same order as the names occur in this act. As vacancies subsequently occur in the Board, their successors shall be

appointed by the Governor, by and with the advice and consent of the Senate, and shall hold their offices for the term of four years from their appointment, and until their successors are appointed and qualified. The term of each manager shall be designated in her certificate of appointment. Upon the expiration of the term of service of any member of the Board of Managers, one manager shall be appointed in the same manner, whose term of office shall continue four years from and after the expiration of the term of her predecessor and until her successor is appointed and qualified. All vacancies in said Board shall be filled by appointment by the Governor, subject to approval by the Senate at its next succeeding session. The person appointed to fill a vacancy shall be entitled to hold her office for the unexpired portion of the term of the person whom she may be appointed to succeed. Said managers, before entering up the discharge of their duties, shall take an oath or affirmation faithfully to perform the duties of their office; which oath or affirmation shall be filed and preserved in the office of the Secretary of State: Provided, however, That the Governor, Auditor and Secretary of State, shall constitute a Board of Audit, whose duty it shall be to examine, audit and approve of the accounts and acts of said Board of Managers appointed under the provisions of this act.

(1869 S., p. 61. In force May 13, 1869.)

8257. (6164.) PRESIDENT. 3. The said Board of Managers shall appoint one of their number as President of the Board.

8258. (6165.) LOCATION. 4. The Governor is hereby empowered to select and establish a site for said institution, which shall not be more than five miles distant from the corporate limits of the city of Indianapolis; and, for that purpose, he is authorized to receive, in the name of the State, by donation or purchase, not less than three nor more than ten acres of land, and he shall deposit a certificate of his location of the institution, together with the deed or deeds of conveyance of such land, with the Secretary of State.

8259. (6166.) MANAGEMENT — BUILDINGS. 5. The said institution shall consist of two separate and distinct departments, one of which shall be designated as the "Reformatory Department" and the other as the "Penal Department." Both of said departments shall be under the management of the same officers, but separate buildings for the inmates of each department shall be provided on the same grounds.

8260. (6167.) PLANS. The Board of Managers shall, with the approval of the Governor, prepare and adopt plans for the grounds, buildings and fixtures necessary and proper for such an institution within the limits of the appropriation hereinafter made, and, if practicable, the plans shall be so arranged that the buildings can be enlarged or added to without injury to their symmetry or usefulness. The Board may, with the like approval of the Governor, make and execute all necessary contracts for the construction of such buildings and fixtures and the improvement of the grounds according to the plans which may have been so adopted.

8261. (6168.) FEMALE SUPERINTENDENT AND OFFICERS—RULES. 7. Said Board of Managers may, with the approval of the Governor, appoint a suitable Superintendent of said institution and all necessary subordinates (not exceeding a number to be fixed by the Governor), and fix their respective salaries; and shall have power, with the like approval, to make and enforce all such rules, regulations, ordinances and by-laws for the government and discipline of said institution, and for the admission of girls into the Reformatory Department thereof, as they may deem just and proper. The Superintendent and all the subordinate officers of said institution shall be females: Provided, however, That if a married woman shall be appointed Superintendent, or to any subordinate position, the husband of such appointee may, with the consent of the board, reside in the institution, and may be assigned such duties or employment as the Board of Managers may prescribe.

8262. (6169.) BOND OF SUPERINTENDENT. 8. Before entering upon the discharge of her duties, the Superintendent shall give bond to the State of Indiana, in the sum of ten thousand dollars or over, with security to be approved by said Board of Managers, conditioned for the faithful performance of her duties as such Superintendent, and that she will faithfully account for all moneys, property and effects intrusted to her as such, and shall take an oath or affirmation to discharge the duties of her said office with fidelity; and if said Superintendent shall be a married woman, such bond shall be executed by her husband and her sureties, but need not be signed by herself.

8263. (6170.) DUTIES OF SUPERINTENDENT. 9. The Superintendent shall reside at the institution, and shall have the charge and custody of the buildings and other property thereof, and of the inmates who may be committed to both departments of

the institution, and shall govern them, in accordance with such rules and regulations as the Board of Managers may prescribe, and shall employ such methods of discipline as will, as far as possible, reform the characters, preserve the health, promote regular improvement in the studies and industrial employments of the inmates of the institution, and secure them fixed habits of industry, morality and religion. The rules, regulations and discipline of each department of the institution shall be adapted to the character of the inmates thereof.

8264. (6171.) INTEREST IN CONTRACTS. 10. No manager, officer, or employe of said institution shall be personally interested, directly or indirectly, in any contract, purchase or sale made by or to or on behalf of said institution. All contracts, purchases or sales made in violation of this section shall be deemed and held null and void; and all money paid to such managers, officers or employes, or to any person for their benefit, in whole or in part consideration of such purchase, contract or sale, may be recovered back by civil action, in the name of the State of Indiana, against such manager, officer or employe, or against any person acting in her or his behalf, and it is hereby made the duty of the Governor and Board of Managers, upon satisfactory proof of such interest, to immediately remove such manager, officer or employe so offending and to report the facts to the Attorney-General, who shall take such legal steps in the premises as he may deem expedient.

8265. (6172.) ANNUAL REPORT. 11. Said Board of Managers shall, on or before the first day of January in each year after the institution is open for the reception of inmates, make to the Governor a full and detailed report of their doings as such managers, and of the receipts and expenditures of said institution, with such other information relating to the condition of the institution and its inmates, and the results attained, as may be deemed interesting or useful to the public; which report shall be communicated by the Governor to the General Assembly at the next succeeding session thereof.

Reports as to receipts and payment to State, Sections 3016a, 3016b.

8266. (6173.) OPENING. 12. Whenever said institution, or either department thereof, shall have been so far completed as to admit the reception of inmates intended to be committed thereto, the Governor shall make due proclamation of the fact, and, thereafter, it shall be lawful for the Board of Managers to receive into

their care, custody or guardianship such inmates as may be committed or transferred to either of the departments of said institution, in the manner hereafter prescribed.

8267. (6174.) PENAL DEPARTMENT. 13. The Penal Department of said Institution shall be used for the imprisonment, safe custody and reformation of such women and girls as shall heretofore have been convicted of criminal offenses and sentenced to the State Prison at Jeffersonville, and who are now undergoing imprisonment in that prison, in pursuance of such sentences; and also such women and girls over the age of fifteen years who may hereafter be sentenced to imprisonment in the Penal Department of the institution created by this act, upon conviction by any court of competent jurisdiction of any crime for which such woman or girl might, prior to the passage of this act, have been sentenced to said State Prison.

8268. (6175.) CONVICTS FROM SOUTHERN STATE PRISON. 14. As soon as the Penal Department of the institution created by this act shall be ready for the reception of inmates it shall be the duty of the warden of said State Prison, upon the order of the Governor, to transfer and convey to the institution created by this act all the female convicts who may then be confined in said prison, and deliver them to the Superintendent of said institution, with a certified statement in writing, signed by such warden, setting forth the name of each convict, the court by which, the offense of and for which she was convicted and sentenced, the date of the sentence, the term of court at which sentence was pronounced and the term for which such convict was sentenced, which certified statement shall be sufficient authority for the confinement of such convict in the institution created by this act for the portion of the term of such convict which may be and remain unexpired at the time when she shall be transferred to said institution as aforesaid.

8269. (6176.) FEMALE CONVICTS IN SOUTHERN STATE PRISON. 15. When the Penal Department of said institution shall be ready for the reception of inmates, as aforesaid, the Governor may, as to any or all of the female convicts who may then be confined, as aforesaid, in said State Prison, instead of making an order for their transfer, commute the sentences of said convicts or any or either of them by substituting imprisonment in the Penal Department of said institution for the residue of the term for which they may have been respectively sentenced or for any less period of time.

8270. (6177.) SENTENCE OF FEMALE CONVICTS. 16. After the Penal Department of said institution shall have been proclaimed open for the reception of female convicts, as hereinbefore provided, it shall not be lawful for any court to sentence any female convict to the State Prison upon the conviction of any crime, but thereafter every female convict shall be sentenced to imprisonment in the Penal Department of the institution created by this act; and the term of imprisonment for which such female convict may be sentenced shall be any period of time for which she might, on conviction, have been sentenced to the State Prison at and prior to the passage of this act.

Diminution of time for good behavior, Sections 8238-8241.

The effect of this section is to modify previous statutes relating to the sentencing of women or girls to the State Prison. *Walton v. State*, 88 Ind. 9.

(Acts 1899, p. 511. In force April 1, 1899.)

8270a. INDETERMINATE SENTENCES AND PAROLES.

1. That the provisions of an act entitled "An act concerning the manner of procedure in the trial of certain felonies, and prescribing punishment therefor, appointing a commission on parole, and authorizing it to make rules for the government therefor, approved March 8, 1897," shall apply in the case of every girl and woman, fifteen years of age and over, hereafter tried for felony, in the State of Indiana, except as may be hereinafter provided.

See Section 1906a and Sections 8230-8232 for the act of 1879 referred to in this section; and see Section 8270e for attempted amendment of this section.

8270b. SENTENCE TO WOMANS PRISON. 2. Instead of sentencing girls or women to the State's Prison, courts shall, in case of a verdict or finding of guilty, sentence such criminals to the Womens Prison.

8270c. COMMISSIONERS OF PAROLE. 3. The Superintendent of such prison, the Board of Managers, the Chaplain and the Physicians shall constitute the Board of Commissioners of Parole for such prison. The Superintendent shall be the President of such Board and the Clerk of such prison shall be the Clerk of said Board.

8270d. AGENT, APPOINTMENT. 4. The Superintendent of such prison shall appoint the agent for such prison and the Superintendent shall generally discharge all duties and exercise all authority conferred by said act of 1897 upon prison wardens.

(Acts 1901, p. 320. In force March 9, 1901.)

8270e. AMENDMENT TO ACT OF 1899. 1. That Section 1 of "An act supplemental to an act concerning the manner of procedure in the trial of certain felonies and prescribing punishment therefor, and appointing a commission on parole and authorizing it to make rules for the government thereof, approved March 6, 1899," be amended by adding thereto the following words:

That the provisions of said act shall apply in the case of every girl and woman fifteen years of age and over, hereafter tried for felony or who may now be serving a fixed term of imprisonment, except as may be hereinafter provided.

See Section 8270a for section said to be amended by this section, and there being doubt as to the validity of this section, it is set out as an independent act.

(1869 S., p. 61. In force May 13, 1869.)

8271. (6178.) WHEN SENTENCED TO STATE PRISON. 17. If at any time the Penal Department of said institution shall become so filled with female convicts that no more can be received therein for the time being, or until it shall be enlarged or relieved of some of its inmates, then the Governor shall proclaim the fact; and after such proclamation any court may sentence a female convict over the age of fifteen years to the State Prison, to the same extent and in the same manner as if this act had never been passed, and any female convict so sentenced, at any time thereafter, when she can be received in the Penal Department of the institution created by this act, may be transferred thereto, and imprisoned therein, in either of the modes hereinbefore provided for.

8272. (6179.) FEMALES OVER FIFTEEN MAY BE SENTENCED TO JAIL. 18. Nothing in the provisions of this act shall be construed as to prevent any court, upon the conviction of any woman or any girl over fifteen years of age, of any criminal offense, from sentencing such convict to imprisonment in the county jail of the proper county, under the provisions of any law in force in this State prior to and at the time of the taking effect of this act.

This section does not prohibit the sentencing of female convicts over fifteen years of age to county jails as provided by laws in force prior to the passage of this section. *Ruble v. State*, 52 Ind. 358.

8273. (6180.) VICIOUS GIRLS RECEIVED FOR REFORMATION. 19. Whenever said institution shall have been proclaimed to be open for the reception of girls in the Reformatory Department thereof, it shall be lawful for said Board of Managers

to receive into their care and management in the said Reformatory Department girls under the age of fifteen years, who may be committed to their custody, in either of the following modes:

First. When committed by any Judge of the Circuit Court, either in term time or in vacation, on complaint and due proof, by the parent or guardian, that, by reason of her incorrigible or vicious conduct, she has rendered her control beyond the power of such parent or guardian and made it manifestly requisite that, from a regard to the future welfare of such infant, and for the protection of society, she shall be placed under such guardianship.

Second. When such infant shall be committed by such Judge as aforesaid upon complaint by any citizen, and due proof of such complaint that such infant is a proper subject for the guardianship of said institution, in consequence of her vagrancy or incorrigible or vicious conduct, and that from moral depravity or otherwise of her parent or guardian in whose custody she may be, such parent or guardian is incapable or unwilling to exercise the proper care or discipline over such incorrigible or vicious infant.

Third. When such infant shall be committed by such Judge as aforesaid on complaint and due proof thereof, by the Township Trustee of the township where such infant resides, that such infant is destitute of a suitable home and of adequate means of obtaining an honest living, or that she is in danger of being brought up to lead an idle and immoral life.

8274. (6181.) TERM OF INFANTS IN PENAL DEPARTMENT. 20. All commitments to the Penal Department, made under the provisions of this act shall be until the infants committed respectively attain the age of eighteen years, and all commitments to the Reformatory Department until they respectively attain the age of eighteen years, unless sooner discharged from either department by authority of the Board of Managers, or otherwise, as elsewhere provided in this act.

(Acts 1899, p. 322. In force March 9, 1899.)

8275. (E. S. 1998.) COMMITMENTS. 2. That commitments under existing law or laws which may be hereafter passed to the Reformatory Department of the institution, mentioned in Section 1 of this act, may be made to read for girls under eight nor over fifteen years of age.

8276. (E. S. 1999.) DETENTION AND RELEASE. 3. That all girls who may be now or hereafter committed to said reform school by virtue of any existing law or laws, which may be

hereafter passed, shall be detained in or committed to said reform school until they respectively attain the age of twenty-one years: Provided, That the Board of Managers may release on parole all such girls at the age of eighteen years under such regulations as they may provide, which release shall remain in force during the good behavior of such girl or girls.

(1875, p. 73. In force August 24, 1875.)

8277. (6182.) **DISCRETION TO SEND TO JAIL OR REFORMATORY.** 21. If any girl under the age of sixteen years shall, under existing laws, or under those which may hereafter be enacted, be tried by any court of competent jurisdiction for any criminal offense for which she might, on conviction, be sentenced for any period of time, to imprisonment in the proper county jail, it shall be competent for the court or jury by which the case may be tried at their discretion, on conviction, to substitute confinement in the Reformatory Department of the institution created by this act for imprisonment in the county jail; and such confinement shall be until the infant attains the age of eighteen years, unless sooner lawfully discharged by the Board of Managers or otherwise.

Females over fifteen years of age may be sent to the county jail when the law so provides. *Ruble v. State*, 52 Ind. 358.

(1869 S., p. 61. In force May 13, 1869.)

8278. (6183.) **MAY BE SENT ON REPORT OF GRAND JURY.** 22. If any girl under the age of fifteen years shall be accused before the grand jury of any crime or misdemeanor and the charge is supported by evidence sufficient to put the accused upon trial, the grand jurors, in their discretion, instead of finding an indictment against the accused, may make a return to the court that it appears to them that the accused is a suitable person to be committed to the guardianship of the Reformatory Department of the institution created by this act; and the court may, thereupon, order such commitment until the infant shall attain the age of eighteen years, unless sooner discharged as aforesaid, if satisfied from evidence adduced that such commitment ought to be made: Provided, however, That the production of evidence may be waived by the parent or guardian.

8279. (6184.) **MAY SEND TO REFORMATORY ON ARREST OF TRIAL.** 23. If any girl under the age of fifteen years shall be arraigned for trial before any court of competent jurisdic-

tion, charged with a violation of any criminal law of this State, the Judge of such court may, with the consent of the accused, arrest at any stage of the cause any further proceedings on the part of the prosecution, and commit the accused to the Reformatory Department of said institution until she shall attain the age of eighteen years, unless sooner lawfully discharged by the Board of Managers or otherwise.

8280. (6185.) MAY SEND ON HABEAS CORPUS. 24. Whenever any girl under the age of fifteen years shall be imprisoned to await her trial on any charge punishable with imprisonment, such girl may be brought before the proper circuit judge, in term time or vacation, on a writ of habeas corpus, and shall be entitled to a private examination and trial before such judge, with a view to the question whether such infant ought to be committed to said institution. Only the parties to the case and the parents or guardian of the accused shall be admitted to such examination, unless one of the parents, the guardian or the legal representatives of the accused shall demand a public trial, in which case all proceedings shall be in the usual manner. And upon such hearing it shall be competent for such judge to make an order committing the accused to the Reformatory Department of said institution until she attains the age of eighteen years, unless sooner lawfully discharged by the Board of Managers or otherwise.

8281. (6186.) ORDER OF COMMITMENT. 25. Whenever any infant under the age of fifteen years shall be committed to the Reformatory Department of said institution under the provisions of this act, the order of commitment shall be signed by the judge by whom it is made and authenticated by the clerk of the proper court, under the seal of the court. Such order shall state the name and age of the infant and the section of the act under which she may be committed, without setting forth or mentioning the offense with which she may be charged; and no other or further record of the proceedings shall be made, unless demanded by the infant or her parent or guardian. If, however, there shall be a regular trial and conviction, under Section 21 of this act (p. 6182), the usual record shall be made, and a certified copy of the judgment shall constitute the order of commitment.

8282. (6187.) SPECIFICATIONS IN COMMITMENT. 26. When a commitment shall be made under either of the specifications of Section 19 of this act (p. 6180), the order of commitment shall also specify under which of the clauses or specifications of said section such order is made.

§283. (6188.) REGULATIONS FOR DISCHARGE. 27.

The Board of Managers of said institution may provide by general regulations for the discharge of girls committed to the Reformatory Department of said institution under any section or provision of this act, and such discharge shall be made by the Superintendent with the approval of the Board.

§284. (6189.) ESCAPE. 28. Any person who may be committed to or confined in either department of said institution, and who may escape therefrom, may be arrested and returned to said institution by any officer or citizen on the written order or request of the Superintendent or Board of Managers.

§285. (6190.) EMPLOYMENT AND INSTRUCTION—APPRENTICESHIP. 29. The Superintendent of said institution shall have power to place any girl committed to the Reformatory Department thereof at any employment, for account of the institution, or otherwise, and cause her to be instructed in such branches of useful knowledge as such Superintendent may think proper; and shall also have the power to bind out such infant, with her consent, during her minority, and may execute indentures of apprenticeship for such infant, which shall have the like force and effect as other indentures of apprenticeship made under the laws of this State. Every indenture of apprenticeship, so made, before the delivery thereof, shall be approved by the Board of Managers of said institution: which approval shall be endorsed on the indenture and signed by the President of the Board, and a record of such approval shall be made in the minutes of the business transactions of the Board. In case any girl so apprenticed shall prove untrustworthy or unreformed the Superintendent may permit her to be returned to the institution to be held in the same manner as before such apprenticeship, whereupon the indenture may be canceled by order of the Board. If such infant shall have an unsuitable master or mistress the Superintendent may, with the approval of the Board, take her back into the said institution with or without the consent of such master or mistress, and thereupon the indenture shall be canceled. All indentures so made shall be filed and kept in said institution and it shall not be necessary to file or record them in any other office or place, but the master or mistress of any girl so apprenticed shall, on request, be entitled to a copy of her indenture.

§286. (6169.) PAYMENT OF EXPENSES. 30. If any girl shall be committed to the Reformatory Department of said institution, upon the complaint or at the instance of her parent or

guardian, the cost of transporting such girl to the institution, and the cost of her subsistence and clothing shall be paid by such parent or guardian, unless such parent is unable, by reason of his or her poverty, to pay the same, or unless such guardian has no funds, effects or estate of such infant out of which the same could be paid. The order of commitment shall, in every such case, state whether the parent is able to pay the cost of the subsistence and clothing of the infant or whether the guardian has any estate or effects of the infant, out of which such costs can be paid. The Board of Managers shall, in every case, estimate and fix the amount to be paid, and the same shall be paid to the Superintendent quarterly in advance.

8287. (6192.) ESTIMATES—COUNTY TO PAY HALF.

31. Said Board of Managers shall, with the approval of the Governor, estimate and determine as near as may be the actual expense per annum of clothing and subsisting an infant committed to the Reformatory Department of said institution and include a statement of such estimated price in each annual report. One-half of the cost of keeping, according to such estimates, together with the entire cost of conveying such infant to the institution, shall be paid by the county from which such infant may be committed, except in cases where the cost of transporting such infant to the institution and her subsistence and clothing is chargeable to her parents or guardian under the last preceding section.

8288. (6193.) PAYMENT BY COUNTY. 32. The expenses which any county may be liable to pay for the clothing and subsistence of any girl committed to the Reformatory Department of said institution, under the provisions of this act shall be paid by the Board of County Commissioners of such county into the State Treasury on a certified statement, in detail, of the amount due therefor from such county being transmitted by the Superintendent of the institution, through the Treasurer of the State to the Auditor of the proper county.

8289. (6194.) PARENT'S PROCEEDINGS—DISCHARGE.

35. If a parent, guardian, or master of any infant committed to the Reformatory Department of said institution, or any person occupying the position of parent or guardian in fact, or any relation by blood or marriage, not more remote than first cousin to such infant, shall feel aggrieved by the commitment of such infant to said institution, he may make written application to the Board of Managers of said institution for the discharge of such infant, which ap-

plication shall be filed with the Superintendent, who shall inform the managers thereof; and the same shall be heard and determined by said managers at such time as they shall appoint for that purpose, not later than the next regular meeting of the Board. Such application shall state the grounds of the applicant's claim to the custody of the infant and the reasons for claiming such custody. Within ten days after the hearing of such application the Board of Managers shall make and announce their decision thereon; and if they shall be of the opinion that the welfare of such infant would be promoted by granting the application, they shall make an order to that effect; otherwise they shall deny the application. The applicant, upon the denial of the application (by first giving security for the payment of all costs, the security to be approved by the clerk of the proper court), may commence an action in the Circuit Court of the county in which the institution may be situated, for the recovery of the custody of such infant against the managers of the institution. The complaint in said action shall state the facts and manner of the commitment, the making of the plaintiff's application to the managers for the custody of such infant, and the denial of such application by said managers, as well as the ground upon which the plaintiff relies for the recovery of the custody of such infant. Said action shall be prosecuted in like manner as other civil actions; and the costs thereof shall be paid by the plaintiff, without reference to the result of the action, unless the court shall state, in the judgment, that refusal of managers to grant the application of the plaintiff was plainly unreasonable, or that the original commitment was manifestly unnecessary and improper.

8291. (6196.) GOVERNOR MAY COMMUTE. 36. Whenever any female under the age of fifteen years shall be sentenced by any court of competent jurisdiction to imprisonment in any county jail, it shall be lawful for the Governor, on the application of such infant, her parent, guardian or any other person, to commute her punishment by substituting therefor the commitment of such infant to the Reformatory Department of the institution created by this act, during the minority of such infant, unless sooner lawfully discharged by the Board of Managers or otherwise.

8292. (6197.) PAY OF MANAGERS. 37. Said managers shall be allowed for their services the sum of one hundred and sixty-five dollars per annum, payable quarterly, on the warrant of the Governor, out of the Treasury of the State; and no traveling expenses or other allowances shall be paid to said managers or any of them.

8293. (6198.) INSTRUCTION. 38. It shall be the duty of said Board of Managers to provide teachers and, as far as practicable, instruct the inmates of said institution in reading, writing and arithmetic.

(1873, p. 139. In force February 3, 1873.)

8294. (6199.) FURNISHING. 2. Whenever said institution, or any portion or department thereof, is ready to be furnished the Board of Managers thereof shall present to the Auditor of State an itemized estimate of the articles needed for that purpose, with the estimated cost of each item or article, which estimate or statement shall be verified by the oath of the President of said Board. Upon the presentation of said estimate or statement to the Auditor of State, said Auditor shall, as soon as practicable, notify the Governor, Secretary and Treasurer of State of the filing of such statement, and if a majority of said officers shall be of the opinion that the proposed expenditure, or some part thereof, is necessary for the proper furnishing of said institution, or any part or department thereof, they shall direct, in writing, the Auditor of State to draw his warrant for the amount so estimated, or such part or portion thereof as they may approve, on the Treasurer of State, who shall pay the same to the President of said Board, or to her order, out of any money in the treasury not otherwise appropriated.

8295. (6200.) CURRENT EXPENSES. 3. The current expenses of said institution shall be estimated for, allowed and drawn from the treasury as follows: At the commencement of each month the Superintendent of the institution shall prepare and verify by her oath an estimated itemized statement, in writing, of the amounts that will be required to meet the current expenses of such institution during such month, and present the same to the Auditor of State, who shall notify the Governor, Secretary and Treasurer of State thereof; and if a majority of said officers shall approve and allow said estimate, or a part thereof, they shall direct, in writing, the Auditor of State to draw his warrant on the Treasurer of State for the amount which may be allowed by said State officers, or by a majority of them, and said Treasurer shall pay said warrant out of any of the moneys in the treasury not otherwise appropriated. Every such estimated itemized statement shall set forth the number of inmates in each of the departments of the institution and also the number of officers and persons employed therein.

8296. (6201.) SEMI-ANNUAL REPORT. 4. The Board of Managers and Superintendent of said institution shall, at the

end of every period of six months (commencing with the first money which may be drawn from the treasury on any estimate made under either of the previous sections of this act), make an itemized report of the expenditure of the money which may have been so drawn from the treasury under this act; and the Auditor shall carefully examine such report, and if, in his opinion, any money shall have been improperly expended in the purchase of unnecessary articles or by paying too much therefor, or otherwise, said Auditor shall immediately notify the Governor, Secretary and Treasurer of State, who, in conjunction with such Auditor, shall immediately proceed to investigate the matter; and in accordance with the decision of a majority of these officers the amount shall be audited: Provided, however, That rendering an adverse decision upon any such amount or any part thereof, they shall notify the disbursing officer, and allow her to present such explanations or adduce such testimony as she may desire in regard to the matter; and they shall have the same power to summon and require the attendance of witnesses as are given to the criminal courts of this State.

(Acts 1889, p. 322. In force March 9, 1889.)

8298. (E. S. 2000.) INSANE—TRANSFER. 4. If any girl committed to the "Girls Reform School," or any woman committed to the "Womans Prison," shall, while therein, become insane, such woman or girl may be transferred to the "Asylum for the Insane," under the same rules and modes of procedure as those prescribed for other insane persons.

Admission to insane hospitals, Sections 3209-3249.

(FROM ACTS OF 1903.)

Section 1. Be it enacted by the General Assembly of the State of Indiana, That Section nineteen (19) of the above entitled act be amended to read as follows: Section 19. Whenever said institution shall have been proclaimed to be open for the reception of girls in the Reformatory Department thereof it shall be lawful for said Board of Managers to receive into their care and management in the said Reformatory Department, girls under the age of fifteen years, who may be committed to their custody, in either of the following modes, to wit:

First. When committed by any Judge of a Circuit Court, either in term time or vacation, on complaint and due proof by the parent or guardian, that by reason of her incorrigible or vicious conduct, she has rendered her control beyond the power of such

parent or guardian, and made it manifestly requisite that from regard to the future welfare of such infant and for the protection of society she should be placed under such guardianship.

Second. When such infant shall be committed by such Judge as aforesaid, upon complaint by any citizen, and due proof of such complaint that such infant is a proper subject for the guardianship of said institution in consequence of her vagrancy or incorrigible or vicious conduct, and that from moral depravity or otherwise, of her parent or guardian, in whose custody she may be, such parent or guardian is incapable or unwilling to exercise the proper care or discipline over such incorrigible or vicious infant.

Sec. 2. All laws or parts of laws in conflict with this act are hereby repealed.

Sec. 3. Whereas an emergency exists for the immediate taking effect of this act, the same shall be in force from and after its passage.

(FROM GENERAL APPROPRIATION ACT, 1905.)

(H. 431. Approved March 7, 1905.)

For the Industrial School for Girls and Womans Prison, at Indianapolis: Regular. Maintenance, thirty-eight thousand dollars; repairs, three thousand dollars; discharge, clothing and parole, seven hundred dollars; library, three hundred dollars. Specific. Repairs on heating plant, six thousand dollars.

(Acts 1905, page 106.)

An Act to amend section 13 of an act entitled "An Act authorizing and providing for the separation of the Indiana Industrial School for Girls from the Womans Prison, for the purchase of land and construction of buildings for the Industrial School for Girls, for appointing commissioners and making appropriations therefor, defining the plan to be pursued, authorizing the appointment of a Board of Managers and a Superintendent for the Girls Industrial School, repealing all laws in conflict therewith and declaring an emergency," approved March 11, 1903.

(S. 64. Approved March 1, 1905.)

AMENDMENT. Section 1. Be it enacted by the General Assembly of the State of Indiana, That Section 13 of the above entitled act be amended to read as follows:

INDUSTRIAL SCHOOL FOR GIRLS—SEPARATION—APPROPRIATION. Section 13. There is hereby appropriated from the State Treasury out of any funds not otherwise appropriated \$235,000.00, or so much thereof as may be necessary for the erection

and equipment of the buildings and expense of the commissioners authorized by this act; \$75,000 of which shall be available on and after June 1, 1905, and the remaining \$160,000 shall be available on and after November 1, 1905. The said buildings shall be erected and equipped and made ready for occupancy as soon as practicable, and when completed turned over to the Board of Managers of the Industrial School for Girls provided for in this act. When this shall have been done by said commissioners and final settlement made with the Auditor of State, then the duties of said commissioners shall end.

(FROM GENERAL APPROPRIATION ACT, 1907.)

(H. 713. Approved March 16, 1907.)

For the Womans Prison, at Indianapolis: Regular. Maintenance, fourteen thousand dollars, and one hundred and fifty dollars per capita per annum for each person actually present over a daily average number of fifty-six inmates each month, which sum is hereby appropriated out of any money in the treasury not otherwise appropriated; said excess amount to be approved by the Board of State Charities. Repairs, three thousand dollars.

(Acts 1907, page 139.)

Section 1. Be it enacted by the General Assembly of the State of Indiana, That the Board of Trustees of the Indiana Industrial School for Girls and the Indiana Womans Prison shall hereafter consist of four trustees. One additional trustee shall be appointed by the Governor to each of said boards as the same are now constituted, within thirty days from the taking effect of this act, and each of such additional trustees so appointed shall serve for a term of four years. The names of said Board of Control of the Indiana Industrial School for Girls and the Indiana Womans Prison shall each be known hereafter as the Board of Trustees of said institution, respectively.

Sec. 2. The name of the Indiana Industrial School for Girls is hereby changed to the Indiana Girls School.

Sec. 4. The Board of Trustees of the Indiana Womans Prison and of the Indiana Girls School shall consist of women only. No other qualifications, except fitness, and those hereinbefore specified, shall be considered in the making of such appointments. Each member of any such Board of Trustees hereafter appointed shall qualify by giving a bond with surety in the sum of ten thousand

dollars to the approval of the Governor. At the meeting of said boards following the appointments provided for in Section one (1) of this act, they shall proceed to elect a president, vice-president, treasurer and secretary, and thereafter annually the organization shall be at the April meeting of each of said boards. Such treasurer shall qualify by executing a bond in the sum of fifty thousand dollars, with surety to the approval of the Governor.

Sec. 5. Such Trustees shall receive as compensation three hundred dollars a year each and their reasonable expenses, not to exceed one hundred and twenty-five dollars a year each, which shall be paid quarterly as other expenses of the institutions are paid.

Sec. 7. In the purchase of all supplies that enter into the maintenance of any of the institutions covered by this act, it shall be the duty to invite competitive bids through sealed proposals to the president of the board of each institution, and the lowest and best responsible bidder shall be awarded the contract, and the same provision shall apply to the construction and equipment of all buildings for any such institution. Public notice of such bids shall be given by publication in the two leading newspapers in the county where such institution is located, and otherwise if considered beneficial. If such board deems it advisable and in the interest of economy to buy certain articles in quantity to last for a longer period, it shall have the right to do so. Such fact, however, shall be particularly stated in the notices. Blank bids shall be furnished for all applicants, but bids shall not be rejected because not contained on such form. Any or all bids may be rejected.

ANNUAL REPORT

Indiana State Soldiers' Home

FOR THE

YEARS ENDING SEPTEMBER 30, 1907
AND SEPTEMBER 30, 1908

TO THE GOVERNOR

INDIANAPOLIS :
WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING
1909

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
INDIANAPOLIS, October 29, 1908. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, November 19, 1908. }

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

J. C. BILLHEIMER,
Auditor of State.

INDIANAPOLIS, November 19, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, November 19, 1908.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer, December 14, 1908.

HARRY SLOUGH,
Clerk Printing Bureau.

ANNUAL REPORT
OF THE
Indiana State Soldiers' Home
FOR THE
Eleven Months Ending September 30, 1907.

TO THE GOVERNOR.

INDIANA STATE SOLDIERS' HOME, October 1, 1907.

Hon. J. Frank Hanly, Governor of Indiana:

Sir:—The Board of Trustees of the Indiana State Soldiers' Home herewith respectfully submits its annual report for the year ending September 30, 1907, showing the condition of the Home, the receipts and expenditures thereof, number of members and how they are cared for, together with such suggestions and recommendations as the Board has thought proper.

The institution is still greatly in need of quarters. At present there are applicants for admission upon the waiting list who cannot be provided for until the completion of the new hospital and rearrangement of the old building, now the hospital, making additional rooms.

Miami County has under construction a cottage to accommodate twenty persons, which when finished together with the increase of rooms in the old hospital building will furnish additional quarters for about 125.

The last legislature appropriated the sum of \$50,000 for a hospital which is now under construction; also the sum of \$6,000 for a cold store room and ice plant; also the sum of \$3,000 for a water tank and tower; \$10,000 for an electric lighting plant; \$6,500 for a trunk sewer, which is now completed; \$4,000 for painting and repairs, and the sum of \$1,000 for copper wire and poles in connection with the lighting plant. These various sums are being expended for the purposes indicated, and the work is being pushed as rapidly as possible.

The physical and sanitary conditions at the Home at this time are as nearly perfect as they can be made. For further information statistics, etc., the Board refers to the reports of the commandant, adjutant, and surgeon hereto attached, marked Exhibits "A", "B" and "C" and made a part hereof.

Respectfully submitted,

W. S. HAGGARD, President.

E. F. RITTER, Vice-president.

L. B. FULWILER, Secretary.

J. W. RINEAR, Treasurer.

COMMANDANT'S REPORT.

INDIANA STATE SOLDIERS' HOME, October 1, 1907.

To the Board of Trustees Indiana State Soldiers' Home:

Gentlemen—In compliance with the statutes I have the honor to transmit herewith the statistical report of the Indiana State Soldiers' Home for eleven months ending September 30, 1907.

Respectfully submitted,

RICHARD M. SMOCK,
Commandant.

ADJUTANT'S REPORT.

INDIANA STATE SOLDIERS HOME, October 1, 1907.

Col. R. M. Smock, Commandant:

Sir—I submit herewith a statement of the receipts and expenditures, and changes in population for eleven months ending September 30, 1907.

Very respectfully,

D. B. KEHLER,
Adjutant and Quartermaster.

ANNUAL REPORT
OF THE
Indiana State Soldiers' Home

FOR THE
Fiscal Year Ending September 30, 1908.

REPORT OF BOARD OF TRUSTEES.

INDIANA STATE SOLDIERS' HOME, September 30, 1908.

Hon. J. Frank Hanly, Governor of Indiana:

Sir—The Board of Trustees of the Indiana State Soldiers' Home respectfully submits herewith its annual report for the year ending September 30, 1908, showing the condition of the Home, receipts and expenditures, number of members and how they are cared for, together with suggestions and recommendations concerning the institution.

The first great need of the institution is more quarters, to accommodate a large number of applicants now on the waiting list amounting to more than 200, which would involve the expenditure of at least \$40,000. Further needs are set out in the Commandant's report hereto attached.

The physical and sanitary conditions at the Home for the past year have been very satisfactory, in fact more so than for any other period of twelve months in the history of the institution.

For detailed information, suggestions, recommendations and statistics, the Board respectfully refers to the approved reports of the various officers of the Home hereto attached and made a part of this report.

Respectfully submitted,

WILLIAM S. HAGGARD,

President of the Board of Trustees of the Indiana State Soldiers' Home.

COMMANDANT'S REPORT.

To the Board of Trustees Indiana State Soldiers' Home:

Gentlemen—I have the honor to submit herewith my report for the year ending September 30, 1908, and also the accompanying reports of the Adjutant and Surgeon.

For information in detail as to the membership of the Home, receipts and disbursements for the year, the condition and work at the Hospital and in the Medical Department, and the affairs of the Home during the past year, I call your attention to said reports.

The driveway to the cemetery has been widened and regraveled, and the sides or slopes of the road sodded.

The steel bridge spanning the ravine has been repaired by putting in new concrete piers. A new section in the cemetery has been platted into lots, and is now in use.

With the specific appropriations made by the last General Assembly the following improvements have been made:

New hospital of fifty-three rooms now completed and ready for occupancy.

Ice plant, with a capacity of two and a half tons of ice every twenty-four hours, cold storage rooms sufficient for the camp's use.

One 200-horsepower engine, two boilers of 200 horsepower each, and one dynamo have been installed in the power-house, giving ample boiler capacity to properly heat and light the entire camp.

A new trunk line sewer has been constructed from the brow of the hill east of the old hospital to the main kitchen, and a lateral sewer from there to the laundry.

New electric light poles have been put up and new heavy copper wire strung from the power-house to all parts of the camp, furnishing splendid light.

Steam pipes have been extended from the main steam line to the new hospital, with sufficient capacity to properly heat the entire building.

The executive building, restaurant, barn, and five two-story frame cottages and six one-story frame cottages have been repainted, and ten cottages, large and small, have been reshingled and the gutters repaired.

A new, commodious brick kitchen has been added to the old hospital, the dining-room enlarged, and the large wards in the building have been partitioned into rooms, new bathrooms, toilet and lavatories added, and hardwood floors laid throughout the entire building, and many minor changes made to better the sanitary condition of the building.

A new steel water tank, equal in size and capacity to the old one, has been erected. This will afford ample water supply for the entire camp and add to its safety in case of fire.

No additional cottages have been erected during the past year, although they are greatly needed. The camp has never been in as good a sanitary condition as now. The new trunk line sewer and repairs to buildings and care of the grounds has brought this result.

Each year brings to the membership of the Home men and women of advanced age and increasing disabilities. Notwithstanding this fact, the discipline of the Home has steadily improved, and a feeling of contentment and good order pervades throughout the camp. Church services are well attended and an interest shown in religious matters. Rev. F. M. Cones, the Home Chaplain, has charge of these services, and is earnest and efficient in all his work.

The demands upon the Home for membership are steadily increasing. We are able now to care for only a little over two-thirds of our enrollment. We need a building or buildings for the civilian employes who are now occupying cottages and rooms that were intended for members of the Home. Each year will add to the number of civilians who will have to be employed to take the places of members who are unable to work. In addition to this building, there should be a building of not less than twenty rooms, with bath, toilet and lavatories, for the use of the girls who are in the Training School for Nurses. They should not be housed in the hospital building, as they are now.

The next General Assembly should make specific appropriations for additional buildings for old people; sodding and cement work; an addition to the kitchen of the main dining hall; greenhouse; coalsheds at the power-house of sufficient capacity to enable us to put in the coal before cold and bad weather sets in; for painting and repairs; many of the cottages, including the Chapel, will need new roofs and gutters. The old commissary building should be remodeled and fitted up for the Library and Memorial Hall, where the oil paintings that the Home has could be preserved. An appro-

priation should also be made to properly frame them. An appropriation should be made for fire-escapes at the new Widows' Home and the Old Men's Building.

Memorial Day was properly observed, as it always is here, and the graves of all persons buried in the Home cemetery were decorated.

I wish to render to the Board of Trustees, officers and employes my appreciation of their uniform kindness during the past year.

Respectfully submitted,

R. M. SMOCK,
Commandant.

ADJUTANT'S REPORT.

Col. R. M. Smock, Commandant:

Sir—I submit herewith a report showing the financial transactions of the Indiana State Soldiers' Home for the year ending September 30, 1908; also one showing the changes in population and other data in relation to the membership of the Home for the same period.

Very respectfully,

D. B. KEHLER,
Adjutant and Quartermaster.

Supper—Cornstarch pudding, baked beans, stewed pears, bread, butterine, coffee, tea.

Tea and coffee to be served at all meals at Widows' New Home, Old People's Home and Hospital.

SURGEON'S REPORT.

Col. R. M. Smock, Commandant:

Dear Sir—I herewith submit my report of the Medical Department of the Indiana State Soldiers' Home, for the fiscal year ending September 30, 1908:

During the last year many substantial improvements have been made in the old hospital, and the new one has been completed for the reception of patients, giving us 150 beds in the old and new combined.

During the months of January, February and March there was an epidemic of lagrippe in the Home that added very much to the usual sickness due to age and chronic diseases. Yet we are pleased to say not a death or sequella resulted from that epidemic.

Harmony prevails in the department, the motto being the best endeavor by each one, and in all our dealings with every one kind words and deeds.

On behalf of all the members of the department, I extend to you and all of the officers and members of the Home our thanks for the many courtesies and expressions of appreciation.

The following are the present members of the staff, Training School for Nurses, the lecturers for the same during the last year and a summary of the work done.

Respectfully submitted,

WARREN R. KING,
Chief Surgeon.

REPORT OF MEDICAL DEPARTMENT.

MEDICAL STAFF.

Surgeon-in-chief	Warren R. King
Assistant Surgeon.....	George W. Lee
Assistant Surgeon.....	Aldine E. Morgan
Superintendent of Nurses	Lillian A. Edgerly

LIST OF DEATHS.

WOMEN.

NAME.	Age.	Date of Death.	Cause.
Baker, Sarah E.....	59	Oct. 4, 1907	Nephritis.
Harris, Bettie.....	95	Nov. 9, 1907	Senility.
Richards, Sarah C.....	69	Dec. 9, 1907	Hemiplegia.
McKinzie, Jane C.....	81	Dec. 12, 1907	Hemiplegia.
Armstrong, Margaret.....	68	Dec. 15, 1907	Result of burns.
Suit, Martha C. H.....	65	Jan. 18, 1908	Cancer of liver.
Riggs, Therissa J.....	69	Mar. 4, 1908	Heart lesion.
Young, Mary.....	74	Mar. 22, 1908	Erysipelas.
Walker, Agnes.....	79	April 5, 1908	Pneumonia.
Cottingham, Sarah.....	72	May 15, 1908	Nephritis.
Arnett, Elmira.....	76	May 17, 1908	Epilepsy.
Perkins, Margaret.....	81	May 18, 1908	Nephritis.
Garrison, Elizabeth.....	74	May 19, 1908	Nephritis.
Evans, Anna.....	70	May 25, 1908	Gastritis.
Harrison, Mary J.....	79	June 15, 1908	Nephritis.
James, Martha A.....	64	June 16, 1908	Nephritis.
Kennady, Lucy J.....	70	July 4, 1908	Cancer of face.
Kinder, Martha.....	65	July 26, 1908	Paralysis.
McCaslin, Margaret.....	65	July 29, 1908	Nephritis.
Benedict, Mary.....	61	Aug. 3, 1908	Paralysis.
Reigel, Francis.....	105	Aug. 14, 1908	Senility.
Dillman, Catherine.....	65	Aug. 22, 1908	Paresis.
Wattleworth, Margaret.....	74	Aug. 23, 1908	Cancer of stomach.
Brown, Margaret.....	84	Sept. 9, 1908	Dysentery.
Ham, Sarah.....	92	Sept. 12, 1908	Nephritis.
Zimmerman, Magdaline.....	78	Sept. 21, 1908	Shock from injury.
Axsom, Mary.....	74	Sept. 25, 1908	Paresis
(Buckles, Mary, cared for T. A. P.).....	56	July 26, 1908	Paralysis.

MEN.

Bates, William.....	68	Oct. 1, 1907	Cerebral softening.
Dyer, Parlee.....	76	Oct. 3, 1907	Arterio sclerosis.
Williams, William L.....	75	Nov. 15, 1907	Tuberculosis.
Clark, Allison.....	75	Nov. 16, 1907	Senility.
Haines, Gardner.....	65	Nov. 22, 1907	Mitral insufficiency.
Strumpfer, Richard.....	81	Dec. 7, 1907	Hemiplegia.
Stafford, Otis.....	69	Jan. 4, 1908	Hemiplegia.
Patton, Robert A.....	78	Jan. 5, 1908	Epilepsy.
Van Kirk, George.....	67	Jan. 8, 1908	Hemiplegia.
Long, George W.....	88	Jan. 9, 1908	Tuberculosis.
Cashman, Francis M.....	69	Jan. 17, 1908	Tuberculosis.
Hudson, James B.....	70	Jan. 19, 1908	Chronic gastritis.
Walker, Hiram.....	83	Jan. 24, 1908	Chronic diarrhea.
Laurimore, Francis M.....	72	Jan. 27, 1908	Heart lesion.
Jones, Charles W.....	87	Feb. 1, 1908	Nephritis.
DeWitt, Hugh.....	95	Feb. 12, 1908	Senility.
Enos, Robert C.....	72	Feb. 15, 1908	Nephritis.
Schneider, Henry L.....	77	Feb. 18, 1908	Nephritis.
Grim, Henry.....	72	Feb. 20, 1908	Peritonitis.
Wismore, Peter.....	62	Feb. 23, 1908	Tuberculosis.
Brown, Ellis.....	68	Feb. 24, 1908	Infection.

LIST OF DEATHS—Continued.

MEN.

NAME.	Age.	Date of Death.	Cause.
Pittinger, William D.....	79	April 7, 1908	Mitral lesion.
Berry, John.....	66	April 27, 1908	Apoplexy.
Barnes, Uriah.....	70	May 27, 1908	Mitral lesion.
Sherer, Peter.....	79	June 23, 1908	Nephritis.
Harrington, Robert.....	62	July 2, 1908	Heart lesion.
Wakely, Daniel.....	78	July 22, 1908	Nephritis.
Dupree, Joseph.....	68	July 26, 1908	Tuberculosis.
Lane, Philip.....	43	Aug. 23, 1908	Nephritis.
Snider, Louis.....	64	Aug. 27, 1908	Nephritis.
Feeley, Patrick.....	68	Aug. 29, 1908	Dysentery.
Stout, David E.....	63	Sept. 30, 1908	Nephritis.

The following members of the Home died during year ending October 31, 1908, while absent on furlough.

THE STATE OF INDIANA.

EXECUTIVE DEPARTMENT,

November 6, 1908.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,

INDIANAPOLIS, December 15, 1908.

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

JOHN C. BILLHEIMER,

Auditor of State.

December 15, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,

Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana. December 15, 1908.

FRED A. SIMS,

Secretary of State.

Received the within report and delivered to the printer December 15, 1908.

HARRY SLOUGH,

Clerk Printing Board.

LETTER OF TRANSMITTAL.

INDIANAPOLIS, IND., November 6, 1908.

HON. J. FRANK HANLY,

Governor State of Indiana, Indianapolis, Ind.:

DEAR SIR—We submit herewith to you, and through you to the General Assembly, a detailed report of the work and investigations of the Tuberculosis Hospital Commission for the years 1907 and 1908, together with recommendations for the erection and maintenance of a sanatorium.

We have also added to this report some of the information which we obtained while investigating sanatoria in different parts of the United States and from consultations with the eminent men who have these sanatoria in charge. We have added this information with the hope that it may be of some service in framing the laws concerning the different phases of the subject.

For your personal assistance and constant advice and co-operation in selecting a hospital site, we beg you to accept our sincere thanks.

Respectfully submitted,

HENRY MOORE, M. D., President.

ISAAC R. STROUSE, Secretary.

J. N. BABCOCK, Treasurer.

WM. S. HOLMAN.

BENJ. F. BENNETT.

Commission.

REPORT.

By an act of the Sixty-fifth General Assembly, approved March 8, 1907, \$30,000 was appropriated to purchase 500 acres of land as a site for a hospital for the treatment of tuberculosis.

Early in May the Governor appointed B. F. Bennett, W. S. Holman, J. N. Babcock, Isaac R. Strouse and Dr. Henry Moore to compose the Commission to select the site. On May 29, 1907, the members met at the Governor's office and organized, electing Dr. Henry Moore, President, Isaac R. Strouse, Secretary, and J. N. Babcock, Treasurer. After consulting the Governor and Dr. Theodore Potter, Secretary of the 1905 Tuberculosis Legislative Commission, a resolution was passed dividing the State into five districts, one member being assigned to each district to make preliminary examination of sites offered, and to inspect their respective districts, seeking the best possible site that could be secured at a price within the appropriation.

The Commission inspected forty-three sites, and traveled many miles in search of better ones, consulting the people on the many questions involved. In the inspection the Commission has taken into consideration the following points: Healthfulness of locality as shown by the average of seven years' record of the State Board of Health; altitude above tide water and surrounding country; salubrity of air, with freedom from smoke, dust and fogs; size of building site, with slope and protection from raw and gusty winds; purity and sufficiency of water supply; drainage, scenery, landscape and water; natural advantages for the enjoyment of convalescing patients; nearest licensed saloon, nearest barrel house, nearest place where gambling and other immoral practices are tolerated, distance of site from center of population, convenience of reaching site by steam and interurban railroad from different parts of the State, nearest steam road switch to building site, nearest steam and electric depots to building site, condition of road between depot and site; acres of agricultural land, with nature and fertility of soil; acres of horticultural land, with fruit trees in bearing; nature of greensward, with special reference to blue grass; nature of soil with reference to clover; acres of timber

land, value of surplus timber, value of buildings that can be utilized, amount and condition of fencing; presence of stone, gravel, sand, clay and shale for use in building or road-making.

At a meeting of the Commission June 13, 1907, Judge W. S. Holman and Mr. J. N. Babcock were appointed a committee to attend the National Conference of Charities and Correction, held at Minneapolis June 12th to 19th. Judge Holman, on his return trip, examined the Ottawa (Illinois) Tuberculosis Sanatorium.

On the advice of many persons of national reputation in this line, the full Commission has visited the States of New York, Massachusetts, Pennsylvania, Maryland and North Carolina, and made careful examination of eleven sanatoria and their environments. Mr. Babcock consulted with the Commission of West Virginia, which is performing a like duty to ours.

Dr. Moore, President of the Commission, spent the winter of 1907 and 1908 in Texas, New Mexico, Arizona and California. The Commission requested and authorized him while there to get acquainted with the tuberculosis situation in the Southwest and to take all side trips necessary to thoroughly examine all sanatoria. He collected a great deal of information that will materially aid the Commission in performing its duties.

Of the forty or more sites submitted to and examined by the Commission, those at Laurel, Greencastle, Rockville and Spencer scored highest in required points.

By request from the Commission, Governor Hanly and Secretary Butler of the State Board of Charities accompanied the Commission and aided it in the final examination of these four sites.

The site three miles east of Rockville, known as the Rockville site, was selected. The stations, East Rockville on the Central Indiana Railroad, and Sand Creek on the Vandalia Railroad, are each about one mile from the proposed site of the buildings. The proposed line of extension of the interurban railroad from Danville, Indiana, to Rockville passes through the site.

The site consists of 504 acres, and cost the State \$24,000. The citizens of Rockville and vicinity paid \$700 cash and the owners threw off \$1,200 from their option price.

E. L. Adams and Wilbur Harrison donated a free right of way to the value of \$350 for a railroad switch, and the Vandalia Railroad agreed in writing to enter into a contract to construct 2,500 feet of switch at a cost to them of \$3,750. This makes a cash donation of \$6,000. The general feeling of philanthropy and friendship prevailing in Parke County for this special cause we consider worth more than the cash donation.

A test well was put down and an abundant supply of water was found, which, upon examination by the State Board of Health, proved to be of excellent quality. The lands were surveyed and abstracts of title made which met the approval of the Attorney-General.

All of these facts were reported to the Governor, who had already made a careful examination of the site, whereupon he ordered the money paid over and title taken according to law.

The site has 125 acres of Raccoon bottom land, with fertile alluvial soil, in a high state of cultivation. We believe that there is no soil in the State better suited for growing the cereals and grasses. We have 50 acres of upland soil in cultivation. This has been farmed without any effort to maintain the fertility, and is deficient in humus and nitrogen, but as clover catches and grows on these lands, we anticipate no serious trouble in restoring them to a fertile condition. The remaining 329 acres are rolling or hilly land, and are about equally divided between blue-grass pasture and woodland with the shade too thick for grasses to grow. Living springs and creeks are found in all parts of the site, and will furnish abundant water for live stock.

There are gravel and sandbars in the river that can be utilized in road-making, concrete foundations, etc.

There is some marketable timber on the site, but the Commission recommends the preservation of the natural forest.

We believe we have suitable soils and exposures for growing all the fruits, berries, vines and vegetables grown in this climate.

We certainly have exceptionally good soils for the growing of cereals and grasses, which will enable the hospital farm to produce pure fresh milk and eggs. These, with the fruits and vegetables, will make it possible to operate the institution at a relatively low rate of expense.

The woodlands are rich in fine specimens of almost all species of shrubs and trees indigenous to the State. Wild flowers and ferns are there in abundance. This will furnish opportunities for the study of botany, which is recommended by tuberculosis specialists as a relief to the tedium of institutional life.

There are also opportunities on the site and at the neighboring coal mines to study the geology and fossil remains of the fauna and flora of the carboniferous age.

The river, fields, hills, bluffs, brush, and timber furnish a natural habitat for thousands of native birds which in spring and early autumn fill the air with bird music from early dawn, when the redbird breaks the silence with his shrill call, till late twilight,

when the reiterative cry of the whip-poor-will closes the oratorio.

The site of the buildings is on the east bank of Raccoon Creek, or river, which flows at this point a little west of south. The highest point of this land is near the river and is 105 feet above the water. A small rivulet parallel to and about 1,000 feet east from the river has cut out a small valley, or rather cove. East of this cove the hills again rise to the same level as those on the bank of the river.

We propose to locate our buildings on the hills and slopes surrounding this cove, which we expect to convert into a park and flower garden. Most of the buildings will be protected from the winds from every direction except the south. From the hills to the northwest of the cove the patients may get a splendid view of the landscape for miles around.

The Commission is contemplating the erection of a dam across the river near the south line of the site, which will afford opportunities for boating a distance of three-quarters of a mile on the State's property.

The small strip of timber land lying between the buildings and the river we think should be converted into a park, with winding paths leading down to a broad promenade near the water's edge.

The forest to the north and east should be left in its original wildwood beauty. It could be used as a tenting ground.

Access to the building site is gained by a winding driveway one-fourth mile long leading from the Indianapolis and Rockville gravel road on the south. This is the only public road in the vicinity. By oiling this road we would be absolutely free from dust.

Under the law the Commission cannot select plans for the buildings until an appropriation has been made for them. However, we have in mind some buildings that appeal to us as the most suitable. These in the main are types of buildings now in use in sanatoria in New York, Massachusetts, Pennsylvania, Maryland and North Carolina, with some new features added that have been adopted in Texas, New Mexico, Arizona and California.

We recommend that the Administration building be of brick and consist of three stories and a basement. This building should be 40x124 feet and should have, in their proper arrangement, the following rooms: One reception room, one office, one room for recorder, one general examination room, two rooms for pharmacy and medical supplies, one throat room, one room for X-ray machine and examination of eyes, one dining room, one kitchen and serving room, one room for sterilizing and washing dishes, rooms

for cold storage and rooms for storage of other supplies of subsistence. We believe that the first story and basement will be sufficient for these. The second story should be arranged to accommodate the house physician and staff. The third story should be arranged to accommodate the nurses and other help. We think the laundry should be in a separate building and should have a special room for sterilizing all clothing and bedding. We recommend a separate building for a laboratory, which should have four rooms, to be used as follows: One for bacteriology and pathology, one for chemicals and urianalysis, one for research, and one for office and study. A one story building, 20x40 feet, will be sufficient for the laboratory. The sputum crematory should be near this building.

We recommend that all buildings and the grounds should be lighted by electricity, and that the sanatorium should have a complete telephone system.

The Commission has not at this time formed an opinion as to the best system for heating the buildings, therefore cannot make recommendations for power and heating plant.

The arrangements for water supply, plumbing and sewage disposal should be the best and most perfect possible.

Near the sanatorium the waters of Sand Creek are so saturated with sulphur, iron and acids coming from the mines two miles above that nothing can live in them. This creek flows into the river below our proposed dam and near where the hospital sewer outlet will be. This water might be used to sterilize the sewage and thus avoid the expense of a septic tank.

On either side of this building we contemplate the erection of a wooden building; each building to afford accommodation for forty-eight bed patients. One of these buildings will be occupied by males, the other by females. The main features of these buildings will be patterned after those now in use at Asheville, N. C. At the northwest corner of the cove we hope to erect, surrounding an oblong court, a one story building patterned after the second ward building of the United States Tuberculosis Hospital at Ft. Bayard, New Mexico.

The Commission is figuring to preserve the main features and reduce the cost of this building; also to utilize the court as a sun parlor, with facilities for religious services, lectures, amusements and necessary exercises in inclement weather.

West of the cove we are thinking of erecting a row of shacks to be planned after those adopted by the Massachusetts Commis-

sion (and now in use at the Millet Sanatorium at East Bridgewater), with some new features added, and in use in Monrovia and Los Angeles, Cal. On the hills east of the cove the Commission favors a row of cottages like those at Saranac Lake, N. Y.*

Towards the southwest corner of the cove we recommend at least two lean-tos like the ones that are now used at Liberty, N. Y., the main features of which are embodied in the Maryland State Tuberculosis Hospital.

For an infirmary, we like best the one at Saranac Lake. The buildings described above will accommodate 190 patients.

The Legislative Commission wisely recommended a hospital sufficient to accommodate from 200 to 300 patients. Our Commission is figuring on accommodations for 20 patients from each Congressional District: 260 in all. This leaves us with 70 patients yet to be provided for. We propose to do this by using tent houses of the same style as those used at Ottawa, Ills., and Tucson, Ariz. These tents in winter will be located in protected spots in the cove; in summer will be scattered.

We believe the buildings so arranged will make it possible to place all patients in quarters suitable to their various physical and mental conditions and temperaments, and will afford opportunities for them to group themselves into congenial squads.

The above buildings are planned with a view of admitting the maximum amount of sunlight and fresh air. We feel that some plans should be worked out and adopted to protect the patient from the sudden changes from pleasant weather to raw and chilly winds and blizzards. There should also be facilities for making the patient comfortable during the hot, sultry days.

We feel confident of a successful solution of these questions as soon as the Commission is authorized to employ a competent architect.

We are not the first in the field of tuberculosis work. We can profit by the experience of other people. Of course, a hospital must be modified to suit the climate and altitude in which it is located. We have examined many sanatoria ranging in altitude from 7,200 feet above sea level to 20 feet below sea level and have found some ideas for our own use in almost every place on the entire list, which is as follows:

Saranac Lake, N. Y., 1,600 feet; Ray Brook, 1,636 feet; Rutland, Mass., 1,100 feet; Sharon, Mass., 350 feet; Eudowood, Mary-

*The International Tuberculosis Congress which was held in Washington, October, 1908, awarded a gold medal to these cottages for being among the best suited to the treatment of curable cases.

land, 450 feet; Philadelphia, Pa., 50 feet; Asheville, N. C., 2,225 feet; San Antonio, Tex., 350 feet; El Paso, Tex., 3,700 feet; Ft. Bayard, N. M., 6,042 feet; Silver City, N. M., 5,800 feet; New Mexico Sanatorium, 6,000 feet; Albuquerque, N. M., 4,900 feet; Sun Mount, near Santa Fe, N. M., 7,200 feet; Tucson, Ariz., 2,400 feet; Phoenix, Ariz., 1,100 feet; Redland, Cal., 1,350 feet; Monrovia, Cal., 1,000 feet; Los Angeles, Cal., 330 feet; Pasadena, Cal., 900 feet; Riverside, Cal., 850 feet; Indio, in Salton Sea Desert, Cal., 20 feet below sea level.

When the Commission started on its tour of investigation we expected to find the best results at sanatoria in the high altitudes—the higher the better. But the result of our investigation caused us to modify our views. We found that the best results of sanatoria treatment are due less to climatic causes and more to the careful and constant supervision of minor details which go to make up the daily regimen.

The best climate and altitude for the successful treatment of tuberculosis is an open question. A doctor's views on the matter are very strongly influenced by the climate and altitude in which he works. Every successful doctor thinks his climate and altitude the best, and we have no doubt that the future superintendent of the sanatorium at Rockville, Indiana (altitude 700 feet), will be strong in his conviction that Rockville, Indiana, is the place to cure tuberculosis.

The most eminent tuberculosis specialists have expressed various opinions about climate and altitude.

The Committee of the National Association for the Prevention of Tuberculosis, in an exhaustive report of that body on the influence of climate in pulmonary tuberculosis, says:

“No advanced worker in this line would today, as was formerly done, place climate first in the order of therapeutic measures. Let it never be forgotten that hygiene, diet, teaching and supervision must always come first, but granted that they are properly attended to, then enters the powerful role of climate reinforcing and accentuating the effects of these other measures and yielding results that cannot be approached even with the same care and watching and food in less favorable climates.”

One member of that committee, Dr. L. F. Flick of Philadelphia, and the only one not representing a climatic resort, refused to concur in the report, and in the discussion is reported as follows:

“I wish to record myself as holding to the opinion that there

is absolutely nothing in climate in the treatment of tuberculosis. I am convinced that it is a question of method, and that that method can be successfully carried out in any climate. Proper living in the open air with proper diet and proper discipline will give the results, and it remains for the climatologists to demonstrate that they can produce with climate what we can not produce without it."

Dr. Arthur Ransome, an eminent English authority on this subject, says:

"Our views in regard to climate have, indeed, undergone considerable modification in recent years. Not long ago a medical man who neglected to recommend to a consumptive a change of climate would have been regarded as entirely wanting in medical knowledge. Since this time a distinct change has come over the opinions of most medical men, who regard the question of climate as of quite secondary importance."

Dr. Arthur Latham, another eminent English authority, says:

"The results of sanatorium treatment in a variety of climates have shown that the old ideas of a particular climate or altitude being a specific for pulmonary consumption are erroneous. Climate in itself is not everything. Any climate will do for the treatment of tuberculosis, provided that the air is pure and bracing."

He also says:

"As far as possible, all patients should be treated under the same climatic conditions as those which they are likely to experience in their subsequent life."

Dr. Norman Bridge says:

"Climate should never be prescribed unless one is sure that it can be taken in the right way and attended by all the aids that are otherwise available. Many times it is worse than useless. The patient in any climate must be properly fed, housed, clothed and warmed. It is just as important that he should have contentment and mental peace. I would rather have a patient kept in the outskirts of an eastern city (or even in the heart of the city) under hygienic management, sleeping in the best air obtainable, winter and summer, and with his friends and comforts about him, than to send him to some better climate to shift for himself and be lonesome and homesick. If a patient can have all the conditions of happiness in the new country, then the right change of climate is

the thing of paramount importance; but to send him away to a strange region to shift for himself and perhaps to do a hundred foolish things is worse than useless."

Dr. A. P. Francine says:

"The sooner the general practitioner or internist ceases to advise change of climate promiscuously, the better it will be for the consumptive in general and for those of small means in particular."

Dr. S. A. Knopf says:

"What is most interesting to know is that this cure cannot only be accomplished in California and Colorado, but also in our own home climate."

Dr. Henry P. Loomis of New York, who is still an advocate of climate, concedes that:

"Not the most beautiful and healthful climate, nor the most delightful resort, can cure the consumptive patient if he is not wisely guided in treatment."

Dr. F. M. Pottinger says:

"I am led to the conclusion that tuberculosis is a disease which is best treated at low elevations."

Dr. E. S. Bullock, Medical Director of New Mexico Sanatorium, says:

"It is strange that the factors of climate should have no effect upon the individual with tuberculosis when they certainly do have effect upon him when he has not tuberculosis."

Dr. Wm. N. Beggs, physician to the National Jewish Hospital for Consumptives at Denver, Colorado, in a published article in the Colorado Souvenir Book for distribution at the International Association, describes the consumptives who should not come to Colorado. We make a few extracts from this article for the benefit of those concerned:

"There is no influence so detrimental to the course of tuberculosis as worry, anxiety and over-exertion. For the last-mentioned reason, no individual suffering from tuberculosis should come to Colorado expecting to be compelled within a short time to rely upon his own exertions for his livelihood, if his physical condition is such that he cannot maintain himself well by his own exertions at home. He is a defective so far as capacity for work is concerned,

and Colorado, like other similar sanatorium districts, constantly has more such than it can offer opportunities for employment to.

"Tuberculosis, when complicated with affections of the heart and kidneys, does not do as well anywhere as uncomplicated cases, and probably does better in lower altitudes than in Colorado. Such cases, if they come to this state, should remain in the lower plains to the east of the mountain range.

"Of course, tuberculosis and diabetes present a combination practically hopeless anywhere, and nothing is to be gained by sending such patients to Colorado.

"Temperament plays an important part in determining the advisability of sending patients away from home. The successful struggle against this disease implies a disciplinary life as continuous and as prolonged as any military course. Those whose temperaments do not permit them to subject themselves to such a regulated life as their conditions require might as well die at home as abroad.

"Homesickness, if marked, also has a detrimental influence on the course of the disease. Therefore, those who cannot control their emotions in that regard might better not leave the bosoms of their families.

"The other acute forms of tuberculosis are not quite as hopeless as the acute miliary. The most careful judgment, however, should be exercised before advising any sufferers from these conditions to go away from their homes. In the case of the pneumonic form, if the patient, after a subsidence of the more acute symptoms, shows a tendency to recover, this may be aided by a change of climate. The acute disseminate type, ordinarily called phthisis florida, usually offers no hope except in the very earliest stages, before the type is recognized.

"It is to be remembered that, on account of our altitudes, it is necessary to inhale 20 per cent. more air here than at sea level to obtain the same amount of oxygen. Therefore, those cases in which the destruction of the lungs has advanced so far that there is insufficient pulmonary tissue left to supply the demand for this increased respiratory function are injured by coming to Colorado.

"Cases which are progressing actively, in which there is extensive involvement of the lungs, accompanied by dyspnoea, marked cachexia, and marked fever while at home, are certainly not cases which offer hope of improvement anywhere."

No consumptive patient should be sent to any sanatorium district, and especially not to Colorado, as a "dernier resort." In

tuberculosis, "to wait for a last chance" is to wait for a lost chance. There are as many consumptives who die as the result of neglected opportunities as from any other cause.

We believe that we have a suitable site and one as near ideal as can be found in the State. After investigating many sanatoria and looking over the records of results of many others, all in varied climates, and after learning the opinions of many eminent tuberculosis specialists, we are convinced that work can be done in Indiana with her much-abused climate that will compare favorably with work done anywhere in the United States. The question now arises as to the necessity of a sanatorium in Indiana.

The report of the State Tuberculosis Commission of 1906, written by Dr. Theodore Potter, so completely answers this question that anything we could say would be superfluous.

The report also includes a history of the disease; its prevalence throughout the civilized world; an account of the discovery of the tubercle bacillus; the development of the treatment, and the anti-tuberculosis crusade.

At this point we wish to call attention to the following conclusions of the Tuberculosis Commission of Maryland.

TUBERCULOSIS AS A DISEASE.

CONCLUSIONS OF TUBERCULOSIS COMMISSION OF MARYLAND, 1906.

Tuberculosis is the most widespread and fatal of infectious diseases, causing from one-fifth to one-tenth of the total mortality of the world.

Tuberculosis prevails especially during early adult life.

After insanity, tuberculosis is the condition which reduces the greatest number of citizens to a state in which they become dependent for assistance or support upon the community in which they live.

Tuberculosis is a disease caused by the entrance into the body and the growth there of a specific micro-organism—the tubercle bacilli.

The micro-organisms enters the economy through the nose or mouth by respiration, through infected food or through wounds in the skin.

The bacilli are spread about chiefly by the spray emitted by patients suffering with the disease in coughing or speaking and by their expectoration.

The most important method of distribution of the tubercle bacilli is probably promiscuous spitting.

Tuberculosis is a preventable and in many instances a curable disease.

The outlook for recovery from tuberculosis is good only in early cases.

The important elements of treatment are rest, food, fresh air.

Early cases of tuberculosis are treated with greatest success in properly conducted sanatoria in country districts.

Careful studies of the question have shown that the establishment of such sanatoria by the State is not only a great charity, but, economically, a valuable financial investment for the community, resulting as it does in the annual saving of a number of valuable lives.

Theodore Roosevelt, President of the United States, was elected President of the International Congress on Tuberculosis which convened in Washington, D. C., on September 21, 1908. We quote the following from his letter of acceptance:

“The importance of the crusade against tuberculosis, in the interest of which this Congress convenes, cannot be overestimated when it is realized that tuberculosis costs our country two hundred thousand lives a year, and the entire world a million lives a year, besides constituting a most serious handicap to material progress, prosperity, and happiness, and being an enormous expense to society, most often in those walks of life where the burden is least bearable.

“Science has demonstrated that this disease can be stamped out, but the rapidity and completeness with which this can be accomplished depend upon the promptness with which the new doctrines about tuberculosis can be inculcated into the minds of the people and engrafted upon our customs, habits and laws. The presence in our midst of representatives of world-wide workers in this magnificent cause gives an unusual opportunity for accelerating the educational part of the program.

“The modern crusade against tuberculosis brings hope and bright prospects of recovery to hundreds and thousands of victims of the disease, who, under old teachings, were abandoned to despair. The work of the Congress will bring the results of the latest studies and investigations before the profession at large, and place in the hands of our physicians all the newest and most approved methods of treating the disease—a knowledge which will add many years of valuable life to our people and will thereby increase our public wealth and happiness.”

S. N. D. North, Director of the Bureau of Census, in a report prepared for this Congress, says that no exact statement is possible as to the exact number of deaths from tuberculosis in the United States, but that he considers President Roosevelt's estimate of 200,000 per year a reasonable one and probably well within the limits of precision attaching to any estimate. After full discussion and due consideration of all the questions involved, the International Tuberculosis Congress unanimously passed on October 3, 1908, the following resolutions:

Resolved, That the attention of the states and central governments be called to the importance of proper laws for the obligatory notification by medical attendants, to proper health authorities, of all cases of tuberculosis coming to their notice, and for the registration of such cases in order to enable the authorities to put in operation measures for prevention.

First. That the utmost efforts should be continued in the struggle against tuberculosis to prevent the conveyance from man to man as the most important source of the disease.

Second. That preventive measures be continued against bovine tuberculosis, and that the possibility of the propagation of this from man to man be recognized.

Resolved, That we urge upon the public and upon all governments the establishment of hospitals for the treatment of advanced cases of tuberculosis.

Third. The establishment of sanatoria for curable cases of tuberculosis.

Fourth. The establishment of dispensaries and night and day camps for ambulant cases of tuberculosis which cannot enter hospitals and sanatoria.

Resolved, That this Congress indorses such well-considered legislation for the regulation of factories and workshops, the abolition of premature and injurious labor of women and children, and the securing of sanitary dwellings as will increase the resisting power of the community to tuberculosis and other diseases.

That instruction in personal and school hygiene should be delegated to properly qualified medical instructors.

To return to the things that most intimately concern our own State, the State Board of Health has furnished the Tuberculosis Hospital Commission with the following tabulated statement of the ravages of consumption in Indiana for the last eight years:

PULMONARY TUBERCULOSIS.

Deaths by Months, with Average for Last Eight Years.

MONTHS.	1900.	1901.	1902.	1903.	1904.	1905.	1906.	1907.	Average.
January.....	300	368	358	324	379	395	359	330	351

The Commission very much regrets that it has no authority or funds available to have made a complete contour map of at least that part of the site that will be occupied by the buildings. Such a map would enable architects and engineers to get a comprehensive idea of the land and secure valuable data for the laying out of the sanatorium buildings and approaches and a drainage and sewage system.

The plans of buildings and their arrangements as we have described in the foregoing pages are only tentative. As we have no authority to employ an architect, it is impossible to give even the approximate cost of the buildings and improvements to the grounds.

However, we can get some idea of the cost of a sanatorium by finding what it has cost other States to build them.

Massachusetts has a sanatorium at Rutland, the construction of which has cost the State \$500,000. The capacity is 350 patients; cost per bed, \$1,428.57.

Maryland is just completing a sanatorium at a cost of \$165,000; capacity 180, cost per bed \$916.66.

New York's sanatorium at Ray Brook cost \$258,789; capacity 240 beds, cost per bed \$1,078.20.

Of these three States the average cost per bed is \$1,141.14. According to these figures, if Indiana provides a sanatorium for 260 patients she must spend \$296,696.40.

• The cost of maintenance per patient per week in different States is as follows: Massachusetts State Sanatorium, \$9.36; New York State Sanatorium, \$9.74; Free Hospital for Consumptives, White Haven, Pa., \$7.22; Saranac Lake, N. Y., \$10.67; Eudowood, Maryland, \$7.60; Los Angeles, Cal., \$7.86. Average, \$8.74.

If the Indiana Sanatorium should average 250 patients, the annual cost for maintenance would be \$218,500. Of this amount the counties, or the patients, will pay \$5 per week per patient, or \$125,000 annually, leaving the State to pay \$3.74 per week per patient, or \$93,500 annually.

Considering the cheapness of coal at the Indiana site and the opportunities which the Hospital farm offers for the production of its own articles of subsistence, the commission sees no reason why the Indiana sanatorium should not be operated at a much lower cost to the State than the figures given above.

The Commission in its investigation of various sanatoria inquired into the subject of employing convalescing patients to do light work about the sanatorium and on the sanatorium farm. Dr.

A. M. Foster, Superintendent of the Eudowood Sanatorium near Baltimore, advocated the doctrine that it is better for the convalescing patient to require him to do a certain amount of light work—regulated according to his condition. He is putting his theory into practice with decided success. He was awarded a gold medal by the International Tuberculosis Congress for having the best plan of employment for arrested cases.

Dr. M. S. Patterson, Medical Superintendent, Brompton Sanatorium, elevation 380 feet, with 72 beds for men and 38 for women, read a very valuable paper at the Washington Congress entitled, "Graduated Labor in Pulmonary Tuberculosis." In this paper he gave the history of his management of the Brompton Sanatorium, in which he adopted a system of graduated labor suited to the condition of each patient, being careful to inform each patient of the fact that the labor was designed for his benefit. He also said that patients who had labored while being cured were much better fitted to resume their vocations when they left the hospital than those who had not labored while being cured.

Dr. Pottenger, of Monrovia, Cal., Director of the Pottenger Sanatorium for Diseases of the Lungs and Throat, read a paper at the Congress entitled, "Application of Rest and Exercise for the Treatment of Tuberculosis," in which he strongly recommends the exercise suited to the patient, the disease and the stage of the disease, paying special attention to the heart.

We are fully convinced from our observation and consultation with superintendents of various sanatoria that it is to the very best interests of the convalescing patients to require light labor of them, always stopping short of fatigue.

We think the conditions of our site will be excellent for carrying out this plan, which will benefit the patient and reduce the expense of maintaining the institution.

Those who are engaged in the crusade against tuberculosis strongly recommend sanatoria and dispensaries as the best means of fighting the disease. In fact, the general public seems to be coming to the same conclusion as evidenced by the public funds appropriated for this purpose in the different states.

In June, 1907, the State of Pennsylvania placed at the disposal of the Commissioner of Health \$600,000 for tuberculosis sanatoria, and they now have room for 450 patients.

That State also placed at the disposal of the Health Commissioner \$400,000 for dispensaries, and he has opened dispensaries in 52 counties.

The State of Minnesota has just completed a sanatorium for the treatment of incipient cases.

Missouri, on August 1, 1907, opened its sanatorium, with a capacity of 200 patients.

North Carolina has purchased a site of 348 acres for a sanatorium for its indigent consumptives.

Ohio expects to open her sanatorium, capacity 220 beds, estimated cost \$500,000, about July 1, 1909. The State has also provided for a tuberculosis hospital in each county, and the county of Franklin will open its hospital before the close of the year.

The success of the sanatorium will depend largely on the class of patients received. Our law specifies a hospital for the treatment of "incipient cases of pulmonary tuberculosis." If this class only is received we may reasonably expect that the average time spent in the institution by each patient will be about six months, and that the number of cases cured or arrested will be about 75 per cent.

If cases beyond the incipient stage are admitted, then we may expect such cases to stay from one to two years in the institution, and the average of cured or arrested cases will drop to 40 per cent. or lower, and it will take a herculean effort to prevent the sanatorium from being converted into an asylum for incurable cases, and thus defeat the purpose for which it was intended.

The success of the institution will also depend on a correct diagnosis and classification of the cases applying for treatment.

Dr. Lawrason M. Brown, the eminent resident physician of the Adirondack Sanatorium, in a paper read before the Tri-Centennial Anniversary of the Medical Society of the county of Rensselaer, New York, February, 1906, says:

"It will be impossible for me to do more today than to touch upon a few of the most important points in the diagnosis of pulmonary tuberculosis. I shall not attempt to give you a true perspective of diagnosis as applied to this disease, but shall draw largely from my own experience, and warn you of my mistakes and errors. The diagnosis of pulmonary tuberculosis often demands all of our critical faculties. In the first place, many of us, it seems to me, are not entirely unbiased when we attempt to make a diagnosis in a friend or an old patient. Many cases of pulmonary tuberculosis are overlooked simply for the reason that the examiner cannot convince himself that his friend, or patient, whom he has known for years, could have such a thing as tuberculosis."

Dr. Brown then follows with three pages of technical description, giving points in the diagnosis. Dr. Brown's paper, we think, clearly demonstrates the fact that we cannot expect the general practitioner, between whom and his patient there is usually a strong friendship, and who has not made lung diseases a specialty, to correctly recommend what are suitable cases for admission to a sanatorium. His friendship for his patient will be liable to allow the patient to remain at home when he ought to be in a hospital, or recommend him for admission when it is too late.

Each county will be entitled to its pro rata representation in the institution. The State should provide some system according to which patients could be examined near their homes. Massachusetts has eight places situated at different centers of population in charge of expert tuberculosis specialists where patients may be examined.

We believe some similar arrangement would be of material benefit to our State. In this way the specialist could get in consultation with the family physician of each case presented and secure a full family history and the special idiosyncrasies of the patient. If we are to expect best results, it is necessary that a full history of the patient should be known and also that of his family.

We have learned from the records of the State Board of Health that for the last eight years the deaths from consumption in Indiana will average 3,979 per year. The duration of the disease from the mixed infection in fertile soil till the time when the patient succumbs is reckoned by good authorities to be three years. Now, if 3,979 consumptives die in Indiana annually, there must be 3,979 cases of infection in the State annually. This would make 11,937 constantly in the procession marching to certain death, 3,979 falling in the front ranks and 3,979 recruits being added annually to the rear to keep up the army. These are startling figures; nevertheless, they are true.

The question is, will Indiana make an effort to snatch from the silent procession those who have not already crossed the dead line? Will she make the effort sufficient for the prevention of new implantation? If she intends to stop this procession she must begin at the recruiting stations, which are located in the vicinity of each and every case of consumption that is not properly cared for.

Who of us has not, with aching heart, seen a loved one join that fatal march and watched the tottering steps grow more feeble day by day while hope and despair reigned alternately in the heart of the doomed sufferer?

Will Indiana listen while the thief Procrastination whispers in her ear, "Not yet"? Will she stand indifferent while the silent procession of her helpless citizens marches on to certain death? Will she allow the spirit of commercialism, which measures dollars and cents against the best interests of humanity, to control legislation?

We think we can find an answer to all these questions by examining the state records, in which we learn that, according to last report, Indiana has \$8,412,381.39 invested in benevolent and correctional institutions and that she expends annually \$1,574,408.72 in their maintenance. To this may be added \$995,499.96 spent by the counties and the overseers of the poor in various townships, not to mention the time and large sums of money spent by the charitable organizations.

We know that these public funds are necessary and that they are judiciously expended, for the use that every dollar is put to must be reported to and approved by our excellent State Board of Charities.

Since the organization of this Board, eighteen years ago, its work in organizing and systematizing public charities has been colossal and a great economy to the public.

It is a false idea of economy to hold back the money necessary to make a successful fight against consumption. A study of the vital statistics, not only of Indiana but of the whole United States, ought to convince any one that this fight must be made at whatever cost necessary.

In view of all these facts, the State Tuberculosis Hospital Commission feels safe in trusting to the Governor, the Legislature and all the good people of the State for the erection and maintenance of a Tuberculosis Sanatorium that will be in keeping with the present magnificent institutions of our glorious State.

CONCLUSIONS.

1. Incipient tuberculosis can be successfully treated in the climate of Indiana.

2. Tuberculosis can be treated most economically and successfully in a sanatorium.

3. From 75 to 80 per cent. of incipient cases can be cured or arrested at an average stay of six months in the sanatorium.

4. A very large per cent. of the cases, if they live in a hygienic way, will not relapse, but they may be reinfected if exposed.

5. The important elements of treatment are rest, fresh air, sunshine and the most nutritious diet.

6. The patient must do his part by being cheerful and hopeful, strictly obeying the rules of the sanatorium, the daily instructions of his physician and avoiding all excesses of every kind.

RECOMMENDATIONS.

1. We recommend that a modern sanatorium for the accommodation of 260 patients suffering with incipient tuberculosis of the lungs be erected at the earliest possible moment.
2. That the State shall appoint in each Congressional District a lung and throat specialist to examine and recommend applicants for the sanatorium.
3. That the sanatorium shall conduct a school for training nurses in the special work of caring for consumptives, and teaching the people how to prevent the spread of the disease.
4. That fresh milk, eggs, fruit and vegetables be produced on the farm.
5. That \$300,000.00 be appropriated to be available at once for erecting a sanatorium, equipping it with everything necessary for its successful operation, and for the fencing, draining, equipping and stocking of the hospital farm.

FINANCIAL STATEMENT.

THIRTIETH ANNUAL REPORT

OF THE

Indiana School for Feeble-
Minded Youth

FORT WAYNE, INDIANA

For the Fiscal Year Ending September 30

1908

TO THE GOVERNOR

INDIANAPOLIS:

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING

1909

STATE OF INDIANA.

EXECUTIVE DEPARTMENT,

December 14, 1908. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,

INDIANAPOLIS, December 23, 1908. }

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

J. C. BILLHEIMER,

Auditor of State.

December 28, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

LUMAN K. BABCOCK,

Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 28, 1908.

FRED A. SIMS,

Secretary of State.

Received the within report and delivered to the printer December 28, 1908.

HARRY SLOUGH,

Clerk Printing Board.

BOARD OF TRUSTEES.

JAMES W. SALE, President, Bluffton.
ALBERT P. SINCLAIR, Vice-President, Cloverdale.
EDWARD M. WILSON, Treasurer, Fort Wayne.
MRS. MARY ROWAN HARPER, Secretary, Fort Wayne.

OFFICERS.

ALBERT E. CARROLL, Superintendent.
NORA GRIFFIN, Matron.

MEDICAL DEPARTMENT.

HAROLD K. MOUSER, M. D., Resident Physician.

MEDICAL CONSULTING STAFF.

Surgery.

MILES F. PORTER, A. M. M. D.

Internal Medicine.

B. VAN SWERINGEN, M. D.

Eye, Ear, Nose and Throat.

KENT K. WHEELOCK, M. D.

ACCOUNTING DEPARTMENT.

MELVIN DRUCKEMILLER, Chief Clerk.
LEONE P. MARSH, Superintendent's Secretary.
NELLIE L. EVANS, Bookkeeper's Assistant.
CARRIE GRIFFITH, Night Clerk.
MARGARET TOWNSEND, Record Clerk.
FRANK W. JOHNSON, Storekeeper.
FRANK ANGLIN, Storekeeper's Clerk.

SCHOOL DEPARTMENT.

CYRUS D. MEAD, Principal.
MRS. ALICE SUMMERBELL, Special School and Library.
MARJORIE SMITH, Kindergarten.
MILDRED H. WINCH, Kindergarten and Primary.
MRS. MARTHA KIMBLE, Primary.
ROSALIE DECKER, PRIMARY.
MAYME B. ROSS, Primary and Intermediate.
FERN THOMPSON, Primary and Intermediate.
GRACE THOMPSON, Intermediate and Grammar Grade.

MARY WINTERMOTE, Art and Grammar Grade.
 ZILLAH BOTHWELL, Needle and Lace.
 ELIZABETH A. ELLIS, Sloyd and Clay Modeling.
 ANNA R. AUTEN, Physical Training.
 GRACE A. HINDMAN, Voice and Piano.
 GEORGIA VON EBERHART, Girls' Orchestra.
 G. J. THOMPSON, Boys' Band.

HEADS OF DEPARTMENTS.

WILLIAM J. SMITH, Supervisor Colony Farm.
 HARRY THOMPSON, Supervisor East Wing Boys' Ward.
 ALICE WILSON, Supervisoress Custodial Cottage for Boys.
 LALLA HOPKINS, Supervisoress West Wing Girls' Ward.
 ELLA McCORMICK, Supervisoress Custodial Cottage for Girls.
 BELLA MACTAVISH, Supervisoress Cottage for Adult Females.
 FRANCES THOMPSON, Head Nurse.
 LEW DEHAVEN, Chief Engineer.
 GEO. JOHNSON, Woodworking.
 WILLIAM MERTZ, Painting.
 HENRY MEURER, Mattress Making.
 FRED KOENIG, Tailoring.
 JOHN A. MILLER, Shoemaking.
 ANDREW HEINZLEMAN, Bakery.
 P. J. BOUILLON, Cold Storage.
 JOHN DICKSON, Farm and Dairy.
 MORRIS PULLIN, Gardener.
 GUSTAV WUNDERLIN, Florist.
 R. O. BAILEY, Outside Overseer.
 KITTIE HARGRAVE, Laundry.
 MRS. F. W. JOHNSON, Dressmaking.
 MABEL HARVEY, Mending and Comfort.
 AUGUSTA HOPKINS, Sewing Room, Cottage for Adult Females.
 MRS. M. McLAUGHLIN, Sewing Room, Colony Farm.

REPORT OF BOARD OF TRUSTEES.

TO THE HONORABLE J. FRANK HANLY, *Governor of Indiana*:

Sir—In compliance with the law, the Board of Trustees for the Indiana School for Feeble-Minded Youth respectfully submits for your consideration its thirtieth annual report for the fiscal year ending September 30, 1908. Included in this is the report in detail of the Superintendent, School Principal, Resident Physician and the several statistical exhibits covering the various operations of the institution for the year.

There has been no change in the personnel or the organization of the board since our last report, nor has there been any noteworthy changes in the executive management of the institution. Normal conditions have obtained in all the several departments, and while the growth of the institution has been exceptional and has placed increased burdens upon those in charge, the general efficiency and high standard of the institution have been maintained.

The enrollment on the 30th day of September, 1907, at the time of our last report, was 1,033. During the year we have received 123 inmates and have lost by death 22, by discharge or withdrawal 28, leaving the total enrollment on September 30, 1908, 1,106, making an increase in the population of 73 for the year.

The completion of the new Custodial Cottage for Boys and the addition to the Custodial Cottage for Girls have made this large increase possible. The relief afforded the institution through the completion of the Custodial Building for Boys gives us room for about 65 male inmates of the brighter grade. With our present accommodations and in the event of our being relieved of the necessity of receiving epileptics, we believe further extensions in the way of additional building for boys will be unnecessary. However, our accommodations for both girls and adult females have been crowded to the limit for the past three years. Some relief was afforded during the year by the completion of the addition to the Custodial Cottage for Girls, but this was only temporary. We have on our waiting list at this time, completed papers for the admission of 14 girls under 16 years of age and commitments for 28 adult females, none of which can be received or cared for except as vacancies occur

through death or withdrawals. Many of these cases are extremely urgent and some provision should be made for their care and protection in this institution. This is especially true in the case of the adult female department, where we now have such a large waiting list.

The steady increase in our enrollment the past ten years makes it imperative that we enlarge our hospital facilities. The present hospital building was originally constructed to take care of the requirements of an institution of 500 inmates. With the present enrollment of over 1,100 and the contemplated additions that will place in our care 1,300 to 1,350 inmates, our present hospital facilities are entirely inadequate.

All permanent improvements for which the last General Assembly granted specific appropriations have been completed. These include: Addition and alterations to the Custodial Cottage for Girls; plastering the walls in the Custodial Cottage for Boys; new equipment for the electric lighting and power department; a high pressure pump for the general distribution of water; the extension of water mains for fire protection on the institution grounds; the laying of cement walks and floors, and the purchase of additional farm land. All of these improvements were completed and farm land purchased within the amounts appropriated by the legislature.

Following are the expenditures from the various funds, both regular and specific, for the fiscal year ending September 30, 1908:

Maintenance.

Regular appropriation	\$122,000 00	
Excess on 54,032 inmates over 1,000.....	6,591 53	
Expenditures		\$128,587 86
Amount unexpended		3 67

Repairs and Painting.

Regular appropriation	\$7,500 00	
Expenditures		\$7,499 96
Amount unexpended		04

Farm Land.

Appropriation (unexpended, 1907).....	\$13,325 00	
Expenditures		\$13,325 00

Farm Drainage.

Appropriation	\$1,000 00	
Expenditures		\$999 33
Amount unexpended		67

Addition to Custodial Cottage for Girls.

Appropriation (unexpended, 1907).....	\$20,557 25	
Expenditures		\$20,557 17
Amount unexpended		08

Electrical Equipment.

Appropriation	\$6,000 00	
Expenditures		\$5,986 40
Amount unexpended		13 60

High Pressure Pump.

Appropriation	\$1,200 00	
Expenditures		\$1,200 00

Extension of Water Mains on Institution Grounds.

Appropriation	\$4,000 00	
Expenditures		\$4,000 00

Cement Walks and Floors.

Appropriation	\$3,000 00	
Expenditures		\$2,999 97
Amount unexpended		03

Plastering Custodial Cottage for Boys.

Appropriation	\$4,300 00	
Expenditures	4,296 22	
Amount unexpended		3 78

Tuition Receipts and Industrial Proceeds and Earnings.

Receipts for tuition accounts.....	\$3,600 94	
Industrial proceeds and earnings	879 49	
Deposited with State Treasurer		\$4,480 43

NEEDS OF THE INSTITUTION.

We present herewith the following needs of the Institution for the coming biennial period:

REGULAR APPROPRIATIONS.*Maintenance.*

We believe the annual maintenance appropriation for the next biennial period should be \$130,000.00 based on 1,000 inmates actually present with an excess allowance of \$130.00 per capita per annum for each inmate actually present over that number.

Repairs and Painting.

On account of the age and number of our buildings, constant repairs are needed. For this purpose there should be appropriated \$8,500.00 per annum.

SPECIFIC APPROPRIATIONS.

For the past three years we have found the regular maintenance appropriation insufficient. Supplies of all kinds and wages of help have increased greatly, while our maintenance fund has remained stationary. Although we have closed each year without a deficit, it has been at the expense of our equipment and regular maintenance supplies. In order to avoid a deficit during the present year, we would recommend an additional appropriation of \$10,000.00 to supplement our regular maintenance fund.

For a general hospital building and equipment to meet the requirements of the present population, we would recommend an appropriation of \$100,000.00.

For a cottage for adult females to accommodate 120 beds, we would recommend an appropriation of \$60,000.00.

For a cold storage and ice plant, including building for same, we would recommend an appropriation of \$7,500.00.

For additional equipment in the engineer's department, including one oil separator, a duplex steam trap system for boiler plant, an electric motor and equipment for brick yard, we would recommend an appropriation of \$1,925.00.

For additional equipment in the bakery, including one dough mixer, one moulding machine, a metal proof room and steel dough troughs, we would recommend an appropriation of \$2,500.00.

For two thousand eight hundred twenty (2,820) feet iron fence to protect the main institution grounds, we would recommend an appropriation of \$3,200.00.

For 12 fire escapes and ladders as recommended by the state factory inspector, we would recommend an appropriation of \$2,500.00.

For cement walks and grading roadways and grounds, we would recommend an appropriation of \$2,500.00.

For a root cellar at Colony farm, we would recommend an appropriation of \$1,500.00.

For a frame stock barn at the north farm, we would recommend an appropriation of \$1,500.00.

For farm drainage and fencing, we would recommend an appropriation of \$1,500.00.

In closing our report we wish to take this opportunity to express our grateful appreciation of the interest you have always shown in the welfare of this institution and for your encouragement and counsel.

Respectfully submitted,

JAMES W. SALE,
MARY R. HARPER,
EDWARD M. WILSON,
Trustees.

FORT WAYNE, INDIANA, September 30, 1908.

REPORT OF SUPERINTENDENT.

To the Board of Trustees:

I have the honor to submit herewith the thirtieth annual report of the Indiana School for Feeble-Minded Youth for the fiscal year ending September 30, 1908:

MOVEMENT OF POPULATION.

	Boys.	Girls.	Adult Fe- males.	Total.
Enrolled September 30, 1907.....	459	435	139	1,033
Admitted during the fiscal year.....	69	43	11	123
Total enrollment	528	478	150	1,156
Died during the fiscal year.....	9	7	6	22
Discharged during the fiscal year.....	3	..	3	6
Withdrawn during the fiscal year.....	14	8	..	22
Total died, discharged and withdrawn.	26	15	9	50
Enrollment September 30, 1908.....	502	463	141	1,106
Actual number present September 30, 1908....	494	461	141	1,096
	Males.	Females.	Total.	
Daily average actually present.....	467.532	586.499	1054.032	

	Boys.	Girls.	Adult Fe- males.	Total.
Applications presented	72	30	18	120
Applications accepted pending room.....	68	26	18	112
Applications deferred
Applications rejected	4	4	..	8
Applications completed not acted upon.....	5	5	4	14
Total applications accepted on file pending room	9	14	28	51

Of 120 applications presented for consideration, 112 were accepted pending room and 8 were rejected. Completed applications on file to be presented at the next regular meeting of the Board are: Boys, 5; girls, 5; adult females, 4; total, 14. Applications on file, accepted pending room, are: Boys, 9; girls, 14; adult females, 28; total, 51. Seventeen boys, seven girls and two adult females were withdrawn by parents or relatives. One girl and one adult female were discharged, both being placed in good homes.

The addition and alterations to the Custodial Cottage for Girls were completed early in February of the present year and the building was immediately reoccupied by the girls who had been housed temporarily in the Custodial Cottage for Boys, which building had been completed some seven months previous. The addition and alterations in the Girls' Cottage give us an increased capacity of about 28 beds. By using the second floor hall as a sitting room, we were able to establish a new division, accommodating 40 middle grade girls. The Custodial Cottage for Boys, which was completed in June, 1907, was used for about seven months, as stated above, for housing the custodial grade girls while their building was being remodeled. On February 15, 1908, the building was occupied by 148 low grade boys, forming five complete divisions. These boys were selected from the various departments in the Institution but principally from Divisions Six and Eight of the main building, Division Fifteen at Colony Farm and the nursery department at the hospital. This building has a capacity of 161 beds, which is 11 more than it was designed to accommodate.

Rooms in the East Wing, first floor, formerly occupied by No. Six Division as day room and dormitory, have been given to Division No. Five as a day room and clothing room. The other rooms vacated by the low grade boys will be used as a sitting room for employes, Supervisor's office, children's library, recreation and reading room.

All applications for middle and high grade boys have been accepted promptly during the present year and a large proportion of the applications presented for lower grade boys have been taken care of. However, it has been necessary to place on the waiting list, those of the helpless or nursery class for want of room in the department to which they would belong. We have accommodations for about 65 boys of the better class or those who would benefit by school or industrial training. The need of additional room for adult females is very urgent. The present cottage used for committed cases has been crowded for the past two years, necessitating the carrying of a large number of commitments on the waiting list. These can only be accepted as vacancies occur, and as all cases received into this department become permanent wards of the state, there is little hope for relief except in the erection of another building. I would recommend an additional cottage for 120 women to be placed directly east of the present building, arranging culinary department so that the cooking for both buildings could be done in one kitchen.

DISTRIBUTION OF POPULATION.

	Enrolled.	Beds.
Main building—Girls	287	285

Cottage for Adult Females.....	*142	128
Custodial Cottage for Girls.....	175	192
	<hr/> 1,106	<hr/> 1,172

SCHOOL DEPARTMENT.

We have reason to be proud of the progress made in our schools. Under the able direction of Prof. Cyrus D. Mead, we have attained a standard that compares favorably with any school of like character in the country. Our motto, "the greatest good to the greatest number," is faithfully lived up to. The precocious child is always encouraged, but not to the extent that the duller, slower child is neglected. Our school house should be enlarged. We have three classes that are compelled to occupy basement rooms that are poorly lighted and ventilated and were it not for our crowded condition, would not be considered for class room work. The present building was erected at a time when the Institution population was less than 500 inmates. Our daily average population has more than doubled and each biannual period we build to care for a greater number of children, and this requires that the educational and other departments be enlarged accordingly.

MEDICAL DEPARTMENT.

Our hospital department has cared for the usual number of sick and dispensary cases. The mortality table shows 22 deaths for the year, or 2 per cent. of the population. The death rate is not large when you consider that more than two-fifths of our population belong to the low grade imbecile or idiotic type. Only two deaths occurred among the high grade inmates during the year. We have been free from epidemics of a serious nature. The removal of the nursery ward from the hospital building has enabled a more complete isolation of tubercular cases which relieved the crowded condition in the hospital wards to some extent. However, the work is still hampered for want of necessary room and adequate facilities in caring for all cases. A new hospital is one of our urgent needs.

* Eight adult females are housed at the Custodial Cottage for Girls.

Dr. Chas. G. Beall, Resident Physician, resigned May 31, 1908, to enter private practice. His successor, Dr. Harold K. Mouser, former medical interne, took charge of the hospital at once. He came to us well equipped for the work and has shown his fitness for the position.

Dr. Douglas Hunter was appointed dental surgeon for the year 1908.

A complete report of the surgical and medical cases, together with the Dental Surgeon's report, is appended hereto.

INDUSTRIES.

About 250 children are profitably employed in the industrial shops and the various domestic departments. Many have become exceedingly proficient in the work of their department and under supervision are able to accomplish sufficient work of a character that entitles them to be classed as institutionally self supporting. Our industries include shoemaking, tailoring, mattressmaking, broom-making, woodworking, carpentry, painting, brickmaking, sewing, mending and comfortmaking, bakery, laundry, gardening, farming and dairy. A detailed report of the work of these departments is appended hereto.

COLONY FARM.

The purchase of additional farm land made possible by an appropriation from the last legislature will add greatly to our farm operations. An epidemic among our swine last winter carried off 125 head, or nearly one-half of our herd. The disease which was supposed to be cholera, was finally controlled and I do not anticipate a recurrence. Our crops for the year and increase in the live stock have been fairly profitable and should reduce the farm expense considerably the coming year.

RELIGIOUS SERVICES.

Chapel services are held each Sabbath in the main auditorium and at all of the detached cottages. All special holidays are observed with appropriate services.

RECREATION AND AMUSEMENT.

The play grounds and woods, dances, birthday parties, biweekly entertainments and various forms of healthful and harmless amusements are a part of the daily life of our children.

MAINTENANCE.

The maintenance appropriation for the past year was \$122,000.00, based upon an actual attendance of 1,000 inmates, with an excess allowance of \$122 per annum per capita for each inmate over that number. The excess allowance amounted to \$6,591.53, making our total maintenance for the year \$128,591.53. The expenditures for all purposes except repairs and improvements was \$128,587.86. The maintenance allowance for the past three years has not been sufficient to care for our needs. Maintenance supplies of every kind have been gradually increasing in value for several years, while our maintenance appropriation has remained stationary or suffered a slight reduction. It is true we have closed each year without a deficit, but this has been accomplished at the expense of our equipment. The next legislature should be asked to appropriate \$10,000 to supplement the maintenance appropriation for 1908-09. For the years 1909-10 and 1910-11 the maintenance fund should be increased to \$130,000 for 1,000 inmates actually present, with an excess allowance of \$130 per annum per capita for each inmate over that number.

GENERAL REPAIRS.

The appropriation for repairs and painting should be increased to \$8,500 per annum. The Institution property has been kept in fair condition on the allowance now made, but as our buildings and fixtures are getting old, necessarily the expense in keeping up repairs increases each year and unless these repairs are cared for promptly, great damage to property is likely to result.

SPECIFIC APPROPRIATIONS.

All improvements for which the legislature of 1907 granted appropriations, have been completed and include the following: Addition and alterations to the Custodial Cottage for Girls, adding a kitchen, dining room and dormitory, and remodeling the old structure by putting in iron and slate stairways, tile floors on the first floor hall, rewiring the entire building and placing large, roomy porches at the south and west entrances.

An appropriation for plastering the walls in the Custodial Cottage for Boys was made necessary because of the roughness of the brick used in the construction of the walls. The work was completed and the building occupied in July, 1907.

Two hundred fifty-four and one-quarter (254 $\frac{1}{4}$) acres farm

land was added to our holdings, giving us now a total of 510 acres, which is sufficient for our present needs.

Much of the farm land was ditched and tiled the past year, but there remains several fields that are badly in need of under drainage.

A complete new equipment of electrical machinery, switch boards, etc., has been installed, the plant is now modern in every particular and of sufficient capacity to furnish all current required without overloading.

The new high pressure compound pump, 10x12x8 $\frac{1}{2}$ x12 inches was installed. This replaced a pump that formerly furnished our main water supply but which had become so old and worn that it could not be depended upon for regular service.

The water main connecting with the city fire line, has been extended throughout the grounds with standard fire hydrants placed at convenient points. Stand pipes and hose racks have also been placed in the three detached cottages, thus giving ample fire protection to all buildings on the main Institution grounds.

More than 20,000 feet of cement walk and floors have been put down. A small appropriation will enable us to extend walks to all of the detached buildings.

NEEDS OF THE INSTITUTION.

The following improvements are recommended for the ensuing biennial period:

A general hospital building, to accommodate both sexes, with ward capacity for 100 patients.

One cottage accommodating 120 beds, to be used for cases committed to the department for adult females.

An addition to the school building, to consist of five class rooms, two rooms for special classes and a library department.

A cold storage and ice making equipment. This will require a new building, as the old cold storage rooms are not properly located nor are they large enough for our needs.

The bakery should have the following machinery and equipment: Dough mixer, moulding machine, metal proof room and dough trough.

The following equipment is required for the Engineer's and Industrial departments: One machinist's lathe, one large pipe machine, one oil separator for steam line, duplex trap system for receiving condensation from low pressure steam lines and return same

to boilers, electrical irons for laundry and sewing departments, one 30 horse-power motor for operating brick-making machinery, including construction of pole line, wire, etc.

A small appropriation is required to build cement walks and improve roadways and finish grading around Cottage for Boys.

Fire escapes should be placed on all buildings that have sleeping rooms on the second floor. This is recommended by the State Bureau of Inspection, and should be done at once.

The iron fence which protects about two-thirds of the front property line should be extended along the entire front of the grounds and to a point about 100 feet north of the Boys' Cottage. Also along the west side of the property to a point north of the girls' play grounds.

An appropriation for the following improvements at Colony Farm is much needed: A brick, slate roof horse barn with twenty stalls and necessary room for feed, harness, etc. The barn now in use is poorly constructed, unsanitary and unfit for the purpose for which it is used.

A concrete root cellar for beets and other roots used for stock feeding and such vegetables and fruits as are stored for winter use.

A frame barn at North Farm to care for about forty head of young stock. There are two sheds on this farm now in use, but they are old, dilapidated affairs, unfit for use and should be torn down.

The fencing and tile drainage that will be required the coming year can not be done from our regular maintenance appropriation. A small specific fund for this purpose is needed.

SPECIAL MENTION.

A small fire occurred in our industrial building on October 24, 1907. It originated in the painting department, the cause of the fire being attributed to spontaneous combustion. The total loss to building and contents amounted to \$527.80, which amount was recovered from the insurance companies and covered into the state treasury as required by law.

IN CONCLUSION.

I desire to recommend for your consideration and commendation my officers and co-workers in every department. Their loyal support and the faithful and conscientious discharge of the many arduous duties devolving upon them have made possible the success which has been ours in the work of the past year.

I also desire to record a grateful acknowledgment to each member of the Board for their helpful co-operation and encouragement which has been given me at all times in the discharge of my many duties.

Respectfully submitted,

ALBERT E. CARROLL,
Superintendent.

REPORT OF SCHOOL PRINCIPAL.

To the Superintendent:

Two phases of work present themselves when submitting to you the regular annual report of the school department. Are we equipped, and do we follow in our school instruction the pedagogical truths that have been accepted as fundamental in the curriculums and teachings of our public schools? It may be said that the theories which have been evolved in the fertile minds of men who have lived for what they could give to the world, make sounder pedagogy when applied to the deficient child than when followed in the courses of study in the better known public school. It does not follow, however, that the science of the mind when applied by man, or the skill of the teacher can create or implant what nature in its mystery has withheld. It does not follow that malformation can ever become formation or that existing brain cells may assume the burden through life of those lacking, the possession of which, should cause every thoughtful being to render praise without end to the One Allwise. Why do we educate them? There is abundant material in this question for a report separate in itself.

Are we equipped? The State of Indiana provides each year for the maintenance of over eleven hundred deficient children. Many of them, although there are exceptions, come from the by-ways of society and have known few of the comforts and none of the luxuries of life. The time was when he was left on the mountain side to perish. He would slowly but positively meet a figurative death were he thrust, in the conflict for subsistence, in competition with his more favored brother. He is admitted to our institution. A physical, mental, and clinical test is held and about fifty per cent. is passed as "schoolable," or possibly schoolable. He is assigned to his division or group, and so the other half. Carefully chosen and prepared food is given him; well lighted and evenly warmed and ventilated day and sleeping rooms are at his disposal; regular habits are formed; hot and cold water is prepared for his bath, which he must take; clean and comfortable beds are provided for him; and he is neatly and warmly clothed.

As a rule, and in particular with the improvable half which has entered, four hours of work, four hours of school, six hours of

recreation and amusement, and nine or ten hours of sleep constitute his daily life. From the standpoint of training, his work hours are as necessary as his school. After he has reached his limit in the schools his work day will be lengthened. The different industrial departments now employ about two hundred boys and girls. As a beginner, however, after he has passed the hospital, a special school awaits him. Simple sensory tests are tried and his mentality is determined. If his speech can be bettered, he returns to the special school at stated periods. If he passes this school he is given his definite room assignment and the daily school routine awaits him. A pleasing environment is of no little value. He enters a room, the first appearance of which is his pride, for his teacher has converted it into a place rarely equalled in the public school. No piece of apparatus is lacking and no material that could possibly be of advantage has ever been denied.

If the child is a kindergartener, the kindergarten opens for him. We have two separate schools. If he is advanced above this, but is not yet ready for the reader, a kindergarten—primary room receives him. In this there are two distinct schools. From the first to the third grade we have eight schools, from the fourth to the seventh we have three. Pupils falling behind in their classifications may be sent to special school and there receive individual help, to be returned to their room when they have made sufficient advancement. This special school aids in a more distinct classification and allows us to follow in the main a course of study suitable to our school.

In the distinctive manual lines, two classes model in clay, four take mechanical drawing and sloyd, and one works at the bench in carpentry. Four classes receive instruction in fancy needlework, lace, and basketry, and four in drawing and art. Girls are offered piano, and instruments for orchestra, and boys are chosen for band. The larger part of five hundred children commit chapel songs and receive voice instruction. All of these special and distinct lines of work have their separate and special teachers. The greater part of the pupils above kindergarten meet a teacher in some manual or special line. Room hand work also supplements daily school work. In addition to the regular kindergarten occupations and special manual lines, ten kinds of hand work formed a part of our last day exhibit in June.

Besides the playgrounds, entertainment is provided throughout the winter, and five chapels each Sunday are conducted in various buildings. A children's library offers the most carefully chosen

books and magazines to the boys and girls and the former are permitted access to an evening reading room under the supervision of a librarian. Every good thought planted takes that much nourishment from the soil of an evil one. Much supplementary reading matter is being added to various separate school room libraries, for reading leads. Texts other than readers are used primarily as readers. Nature work is constantly before the child for his seeing and his feeling. A museum of natural objects collected by the children is drawn upon by any room. Through all work is woven the movements of the hand. A gymnasium, second only to our city schools, is well equipped with modern apparatus. Almost without exception our teachers have either studied or traveled the past summer, two requisites in the ambitious teacher's life.

We do not lack in equipment, but we do lack in room. For six years schoolable children have been denied access to the school building and basement rooms have been improvised, pre-empting much needed space for living room. Two departments of manual work occupy poorly lighted and ventilated school basement rooms. A double cloak room is at present being occupied by our special school. The boys' schools are overcrowded and we are absolutely unable to care for one school. An addition, if not a new building, is imperative.

Having observed the more practical side of our schools, we ask ourselves sometimes whether or not we are pedagogical. Eight hundred years after the dawn of a new religion, a candle light in education flamed for a moment in the "Dark Ages" of the old world when Charlemagne astonished the "schoolmen" with the announced principle that "every child had a right to an education." Later it became a function of the state to provide for such. This has become a cardinal pedagogical truth that no man now denies. Our Institution is founded and exists on such a truth and seven hundred children receive positive instruction that would be totally denied them in public. As far back as Rome, when she was sowing the seed of moral corruption that was to be her downfall, Cicero held "that the amusements and environments of the child should be such as to elevate and refine, as well as to properly develop his powers." The chapel, the entertainments, the discipline, the books, the daily routine and work, the reading rooms, the music, the schools, all are safeguards thrown about him in greater abundance than would open to him were he not here. In fact, here is the only place they would open to him.

Froebel perfected the kindergarten, and accepted truths today

are, "all instruction must be made pleasant and interesting," "the instinct of play and self activity should be utilized in teaching," and "through the senses comes all knowledge." Our kindergarten schools are replete with object and sense material and the games and songs and occupations happily engage sixty children each day. "Present the object before the symbol;" "offer the concrete before the abstract;" "move from the known to the unknown," are abc's in pedagogy. Our primary instruction is daily based on these as viewed from the objects and devices employed by the teacher, from the action work preceding the action word, from the busy material made, from the environment and daily experience of the child leading to his expression of the same.

Interest is a pin prick into sloth. Attention is the result, the greatest task in a teacher's work and a herculean one with us. An attractive room presents a warmth the instant the child enters. He appreciates a pleasant surrounding as keenly as any child. Various supplementary readers are in the room libraries that flagging interest may be met by the reading of a new story. An institution speller presents to him words of his daily life. An abundance of objects of nature surround him, hand work offers relaxation, and an apt story awakens. I have visited school rooms where the children refused to take their eyes from a teacher while telling an oral story. That teacher is strong who can arouse interest in a story and she should be rich in them. The natural teacher is the one who utilizes the activity of the child and instills interest by her ingenuity. Exercises are devised in gymnastics that appeal keenly to the play instinct but that are related to good circulation, good respiration, and good muscular control. In a figurative way, instead of muscle training and co-ordination by sawing wood, we offer the children a game. Work becomes play when it is interesting.

The teaching of the future will be as much to and through the heart as the intellect. Our prisons have many head educated men but very few heart educated. The Great Teacher taught by example and founded the greatest, yet simplest, pedagogical truth. An effort toward this is at least in every teacher's power. Her work is the most sacred of all works. If she feels it, she can never be remunerated. We wish to express publicly our appreciation for your liberality and the confidence you give us.

Respectfully submitted,

CYRUS D. MEAD.

REPORT OF RESIDENT PHYSICIAN.

To the Superintendent:

The following is the report of the Medical Department of the Indiana School for Feeble-Minded Youth for the fiscal year ending September 30, 1908:

One mild case of typhoid fever made its appearance, the source of which could not be ascertained. We have had one slight epidemic consisting of forty cases of influenza, giving rise to no deaths or sequelæ.

In August the hospital building was painted throughout. The establishment of a ward for the isolation and treatment of active cases of tuberculosis makes the danger from the spread of this dread disease much less.

Admittances to the hospital have numbered 822 girls and 837 boys. Three thousand eight hundred twenty-three were attended in the dispensary. During the year we have had twenty-two deaths, giving a death rate of 2 per cent.

Dr. Douglas Hunter was appointed dental surgeon and he has given complete satisfaction in every way.

I give below a list of the important medical and surgical cases, the report of the dentist and the mortality record. I want to thank the management, the consulting staff and the hospital corps for the kindly assistance they have rendered during the year.

Respectfully submitted,

H. K. MOUSER,
Resident Physician.

CASES TREATED.

Medical and Surgical:

Trachoma	1
Simple corneal ulcer	3
Iritis	2
Chronic interstitial keratitis	1
Blepharitis chronic	1
Intra-ocular hemorrhage (traumatic)	1
Acute otitis media.....	7
Organic heart disease (broken compensation).....	3
Pericarditis	2

Endocarditis	1
Tuberculosis cutis	1
Erysipelas	2
Urticaria	3
Sycosis parasitica	8
Impetigo contagiosa	1
Specific gumma	1
Psoriasis	1
Erythema nodosum	3
Pulmonary tuberculosis	10
Lobar pneumonia	3
Broncho-pneumonia	5
Bronchial asthma	1
Hypostatic pneumonia	1
General miliary tuberculosis	2
Tuberculous meningitis	1
Tuberculous adenitis	1
Mesenteric tuberculosis	2
Acute articular rheumatism	3
Sub-acute articular rheumatism	4
Mumps	1
Chorea	1
Status epilepticus	5
Aestivo-autumnal malaria	1
Acute follicular tonsillitis	19
Chronic parenchymatous nephritis	2
Tuberculous spondylitis	2

Ulcerative stomatitis	2
Enterocolitis	8
Raynaud's disease	1
Angio-neurotic edema	1
Dementia	1
Varicella	6
Typhoid	1
Herpes zoster	2
Migraine	1
Diabetes insipidus	2
Influenza	40
Cystitis	4

Surgical:

Radical operation for carcinoma of breast	1
Laparotomy for tuberculous peritonitis	1
Appendectomy	1
Removal of hemorrhoids	1
Circumcisions	5
Mammary abscess	2
Axillary abscess	2
Sprain of ankle	3
Sprain of knee	1

Sprain of wrist	1
Colle's fracture	1
Fracture of metacarpal.....	1
Foreign body in œsophagus.....	1
Tonsilotomy	4
Removal of adenoids	6
Removal of sebaceous cyst	1
Thoracentesis	2

DENTAL WORK DONE IN 1908.

Artificial dentures	3
Extracted temporary teeth	63
Extracted permanent teeth and roots.....	297
Artificial enamel fillings	4
Gold fillings	11
Canal treatments	72
Copper amalgam fillings.....	100
Cement fillings	105
Silver amalgam fillings	537
Canals filled with G. P. points	35
Cleaned	694
Porcelain crowns	1

MORTALITY RECORD.

Number.	NAME.	Age.	Date of Death.	Cause of Death.	Grade of Child.
1	Nancy Pittman	37	Oct. 5, 1907	Chr. parenchymatous nephritis.....	Middle grade epileptic imbecile
2	Ira Nation.....	14	Oct. 26, 1907	Broncho-pneumonia	Low grade imbecile.
3	Frank Reeves.....	31	Nov. 9, 1907	Hypostatic pneumonia	Low grade imbecile.

REPORT OF THE BOARD OF TRUSTEES.

HON. J. FRANK HANLY, *Governor of Indiana:*

DEAR SIR—We respectfully submit for your consideration, "The Sixty-second Annual Report of the Indiana School for the Blind," covering the transactions of the fiscal year ending September 30, 1908.

FINANCIAL.

The financial standing of the school from October 1, 1907, to September 30, 1908, is shown in the following exhibit:

PROPERTY VALUES.

Real estate	\$543,600 00
Personal	31,782 11
Total	<u>\$575,382 11</u>

Appropriations—Regular—

1. Maintenance	\$35,000 00
2. Industries	3,000 00
3. Repairs	2,500 00
4. Library	500 00
	<u>\$41,000 00</u>

Appropriations—Special—

1. Boiler	\$790 00
2. Setting boiler	200 00
3. Stoker	750 00
4. Engine	240 00
5. Addition to laundry.....	1,200 00
	<u>\$3,180 00</u>
	<u>\$44,180 00</u>

Sales—

1. Broom shop	\$181 53
2. Cane shop	6 45
3. Sewing room	28 19
4. Miscellaneous	19 64
	<u>235 81</u>

Total receipts.....	<u>\$44,415 81</u>
---------------------	--------------------

EXPENDITURES.

Appropriations—Regular—

1. Maintenance	\$34,999 08
2. Industries	2,997 93
3. Repairs	2,498 82
4. Library	499 08

 \$40,994 91

Appropriations—Special—

1. Boiler	\$783 66
2. Setting boiler	200 00
3. Stoker	750 00
4. Engine	240 00
5. Addition to laundry.....	1,172 95

 3,146 61

 Total expenditure..... \$44,141 52

BALANCES.

Appropriations—Regular	\$5 09
Appropriations—Special	33 39
Sales	235 81

 274 29

 \$44,415 81

PER CAPITA EXPENSES.

The following exhibit gives the per capita expense for the past ten years, based on the total enrollment, and of the maintenance, based on the average attendance:

1899.....	\$205 60	\$221 08
1900.....	196 51	202 75
1901.....	204 06	207 54
1902.....	220 07	236 95
1903.....	243 35	249 20
1904.....	231 33	271 64
1905.....	231 45	249 27
1906.....	246 82	263 50
*1907.....	230 54	242 76
1908.....	254 62	283 66

POPULATION.

	Boys.	Girls.	Total.
Enrollment for the year.....	68	93	161
Average daily attendance.....	53.22	70.16	123.38
Present September 30, 1908....	54	74	128

 * Consists of eleven months.

REPAIRS.

All the buildings internally and all externally except the main building are in good repair. The Girls' Dormitory has been calcimined, painted or papered throughout and is in an excellent sanitary condition. The halls, closets, assembly and dormitory rooms in the main building have all been repainted. An addition to the laundry greatly facilitates the work in this department. All the heavy machinery has been removed from the wood floors in the original building to the cement floors in the addition. An additional boiler of 125 horse-power in connection with the three old ones gives ample steam for heat and power.

NEEDS OF THE SCHOOL.

For the fiscal years ending September 30, 1910, and September 30, 1911, the school will need the following appropriations:

Appropriations—Regular—	1910.	1911.
1. Maintenance	\$35,000 00	\$35,000 00
2. Industries	3,000 00	3,000 00
3. Repairs	2,500 00	2,500 00
4. Library	500 00	500 00

Appropriations—Special—

1. Dormitory for boys (fire proof)	\$59,200 00
2. Repair of exterior of main building	8,191 00

In this estimate, we have asked the same regular appropriations as those we receive at present. While it has required careful economy in view of the high prices of provisions and labor prevailing in the city, this school has lived within its appropriation and we feel that the same may be sufficient for the ensuing two years. We have asked for an appropriation sufficient to repair the exterior of the main building. The regular appropriation for repairs is only sufficient to keep in proper repair the interior and lighter items of the exterior of the buildings, but is wholly insufficient to meet the extensive repairs necessary on the outside of the main building. On this building, now sixty years old, in many places, the wood work needs renewing, over a considerable portion of the walls the cement coating is disintegrating, the front steps are forced out of place by the frost and the entire building needs repainting. The school is located in the center of Indianapolis and it is necessary to maintain the State's property in keeping with the private property in this section of the city. The appropriation called for is made from an estimate by Adolph Scherrer, the architect, after a careful examination of the building.

We have also asked for an appropriation for a fire proof dormitory for the boys. The necessity of this is set out in full in the report of the Superintendent.

The school work the past year has been highly satisfactory. No contagion or serious sickness of any kind has interfered with the successful conduct of the school work. The value of the school is fully appreciated by the blind. All applicants between the ages of eight and twenty-one years have been admitted who were otherwise eligible.

Respectfully,

A. C. PILKENTON, President,
 F. F. WILEY, Vice-President,
 J. F. HENNESSEY, Treasurer,
 L. M. DUNLAP, Secretary,
 Board of Trustees.

SUPERINTENDENT'S REPORT.

To the Honorable Board of Trustees of the Indiana School for the Blind:

GENTLEMEN—I herewith submit the Sixty-second Annual Report of the Indiana School for the Blind, containing such data as required by law with additional information, outlines and tables deemed valuable to officers, teachers, employes and the public in general.

ENROLLMENT.

There were enrolled during the past year sixty-eight boys and ninety-three girls from fifty-seven counties. The average attendance was 53.22 boys and 70.16 girls. There were present September 30, 1908, fifty-four boys and seventy-four girls. The following list contains the names and addresses of all enrolled during the past year:

BOYS.

SCHOOLS.

LITERARY DEPARTMENT.

A. C. EVENS, Principal, High School, Room 6—12s and 11s.

MABEL HAUKE, High School, Room 5—10s and 9s.

OLIVE AUGHINBAUGH, Room 4—8s and 7s.

NANNIE CRAMPTON, Room 3—6s and 5s.

MARY CATHERWOOD, Room 2—4s and 3s.

FLORENCE REYNOLDS, Room 1—2s and 1s.

All pupils in this Institution are in this department. Twelve years are required for graduation. A year's work is the amount suitable to an average pupil for five hours a day for nine months. The course of study is as near that of the public schools of the State as the necessary modifications will permit. The texts and reference books for this department are in the New York Point, the elementary characters of which are as follows:

NEW YORK POINT ALPHABET.

Capitals A ... B ... C ... D ... E ... F ... G ...
H ... I ... J ... K ... L ... M ... N ... O ...
P ... Q ... R ... S ... T ... U ... V ... W ...
X ... Y ... Z ...

COURSE OF STUDY.

First Year.

Reading.—New York Point.—Alphabet by groups of letters similar in form.

Groups of simple words similar in form and sound selected from the First Reader. Primer and First Reader complete with supplemental work.

Spelling.—All words in the First Reader spelled orally. Special attention given to syllabication.

Writing.—Small letters. Sentence work commenced.

Numbers.—Numbers 1 to 10. Each number as a whole. Relations in the number. Numbers taken away. Fractional parts. All with objects real or imaginary. Drill in rapid combinations.

Language.—Correction of errors in the pupil's language. All answers to be given in complete statements. Exercises on "a" and "an," "is" and "are," and "was" and "were."

Geography.—"Seven Little Sisters."

Form.—Plane and solid forms.

Memorizing.—Simple selections from books and papers.

General Lessons.—Lessons on familiar animals, on parts of the human body and on the care of health.

Second Year.

Reading.—Point Second and Third Readers, Appleton's First, completed with supplemental work.

Spelling.—Spell all new words found in the readers—both oral and written spelling. Attention given to syllabication.

Writing.—Point writing. Small letters and capitals. Sentence work.

Numbers.—Numbers 10 to 50, same as in first year. Simple problems to illustrate each relation. Have pupils give simple fractional parts of numbers. Teach Roman numerals. Develop orders to ten thousands. Drill on rapid combination.

Language.—Continued as in first year. Simple lessons on forms of verbs, nouns and pronouns. Forms of sentences. Exercises in changing from one form to another. Simple lessons in letter writing.

Geography.—"Each and All."

Form.—Modeling of solid forms, and objects related in form. Designs with plane forms.

Memorizing.—Simple selections from books and papers.

General Lessons.—Lessons on common articles of food. Lessons on animals continued.

Third Year.

Reading.—Point Fourth and Fifth Readers, Appleton's Second, completed with supplemental work.

Spelling.—Oral and written spelling—all new words found in the readers. Attention given to syllabication. General definitions of words as found in the readers.

Numbers.—Review of previous year's work by miscellaneous rapid combinations and subtraction work. Original problems. White's Elementary Arithmetic, Part 1.

Language.—Sentence work. Sentences using common verbs in both singular and plural numbers. Common punctuation marks and abbreviations.

Writing.—Copy memory gems and selections read by the teacher in addition to the written work of other recitations. Letter writing.

Geography.—"World and Its People, No. 3."

Memorizing.—Suitable selections from books, papers and magazines.

General Lessons.—Lessons on the human body and on plants and animals.

Fourth Year.

Reading.—Point Sixth Reader, Appleton's Third, completed with supplemental work.

Spelling.—Same as in third year.

Numbers.—White's Elementary Arithmetic, Part II.

Language.—Sentence work continued. Subject and predicate. Plurals and possessives. Principal parts of verbs in general use. Simple compositions on common subjects and about familiar objects. Letter writing.

Writing.—Same as in third year.

Geography.—"Brooks and Brook Basins."

Memorizing.—Same as in the third year.

General Lessons.—The work of the third year elaborated.

Fifth Year.

Reading.—Point Seventh Reader, Appleton's Fourth, with supplemental work.

Spelling.—Oral and written spelling—all new words in the reader. Definitions.

Numbers.—White's Elementary Arithmetic, Part III, to Denominate Numbers.

Language.—Reed & Kellogg's Graded Lessons in English to Lesson 71.

Writing.—Copy work indicated by the teacher in addition to spelling and language work.

Geography.—Elementary Geography.—Indiana Educational Series—to South America. United States studied with dissected map.

History.—"Stories of Our Country."

Sixth Year.

Reading.—Point Eighth Reader, Appleton's Fifth, with supplemental work.

Spelling.—Same as in the fifth year.

Numbers.—White's Elementary Arithmetic completed.

Language.—Reed & Kellogg's Graded Lessons in English from Lesson 71 to page 156.

Writing.—Same as in the fifth year.

Geography.—Elementary Geography.—Indiana Educational Series—begin with South America, Asia and Africa in general, and Europe with dissected map.

History.—"From Colony to Commonwealth."

Seventh Year.

Arithmetic.—White's Complete Arithmetic from fractions to interest.

Grammar.—Reed & Kellogg's Higher Lessons in English from Lesson 10 to Lesson 85. Much attention should be given to composition work.

Geography.—Complete Geography.—Indiana Educational Series—study South America and Asia with dissected maps and review the United States.

History.—"Eggleston's History of the United States" read to the class during the year.

Note.—Spelling should be continued throughout the course in connection with other subjects.

Eighth Year.

Arithmetic.—White's Complete Arithmetic from interest to the appendix.

Grammar.—Reed & Kellogg's Higher Lessons in English from Lesson 85 to Lesson 139. Composition work continued.

History.—Barnes' History of the United States.

Physiology.—Steele's Physiology.

HIGH SCHOOL COURSE.

NINTH YEAR.	Algebra.	Composition and Rhetoric.	Civil Government.	Physical Geography.	Music or Industries.
	Algebra.	Composition and Rhetoric.	Civil Government.	Physical Geography.	Music or Industries.
TENTH YEAR.	Algebra.	American Literature.	General History.	Physics.	Music or Industries.
	Algebra.	American Literature.	General History.	Physics.	Music or Industries.
ELEVENTH YEAR.	Geometry.	English Literature.	General History.	Sociology.	Latin, Music or Industries.
	Geometry.	English Literature.	General History.	Sociology.	Latin, Music or Industries.
TWELFTH YEAR.	Geometry.	English Literature.	English History.	Psychology.	Latin, Music or Industries.
	Geometry.	English Literature.	English History.	Psychology.	Latin, Music or Industries.

Forty credits are necessary to graduate from the Literary High School Department. A credit is one-half year's work of one period of recitation daily for five days in a week with necessary preparation. At the end of the eighth year the pupil may elect the industrial, literary or music course.

HIGH SCHOOL TEXT BOOKS.**Ninth Year—**

Algebra—Peck.

Composition and Rhetoric—Wady.

Civil Government—Fiske.

Physical Geography—Maury.

Eleventh Year—

Geometry—Wells.

Sociology—Giddings.

General History—Barnes.

Literature—Reed & Kellogg.

Tenth Year—

Algebra—Peck.

Literature—Reed & Kellogg.

Ancient History—Botsford.

Physics—Gage.

Twelfth Year—

Psychology—James.

English History—Montgomery.

Literature—Reed & Kellogg.

Geometry—Wells.

MUSIC DEPARTMENT.

ADELAIDE CARMAN, Principal, Piano and Pipe Organ.

WM. T. SHANNON, Piano and Harmony.

LULU A. FISHER, Voice.

BERTHA SCHELLSCHMIDT, Violin and Mandolin.

In this department all pupils of the Institution are not given work. All may be admitted, but only those retained who demonstrate considerable capacity. It is not the purpose to burden this department with pupils who have little capacity or taste for music. The chorus classes are the ones most general, but even in these it is useless to retain pupils who have no ability in this line of work. Individual lessons are given to those only who have shown considerable promise of success.

Chorus work is required throughout the entire course from pupils qualified for this. At the eighth year, when pupils have shown sufficient ability and progress, they are given voice and organ work.

The following is the course of study planned for the music department:

PIANO.

First Year.

Position of body and hands at piano. A knowledge of braille music. Beginning technical exercises (etudes, legato and staccato, phrasing, etc.). First half of Grade 1, National Graded Course. Recital work (1).

Second Year.

Technical work. Five finger exercises. Preparatory scale work. First half of Grade 1. Little pieces by Lichner, Crosby, Adams and Dennee, and others (2). Recital work (2).

Third Year.

Technical work. Five finger exercises all keys and forms, contrary motion, single and double notes. All scales Major and Minor. First half of Grade 2. Sonatinas by Clementi and Kullak (1). Pieces by Hiller, Spindler, Lichner, Reinecek, Loeshorn, Geise and others (2). Recital work (2).

Fourth Year.

Technical work. Preparatory arpeggio work. Preparatory chord work. Scale practice for speed.

Complete second grade. Etudes from Heller, Cramer, Duvernoy, Loeshorn and others (2). Pieces by Heller, Jensen, Bohm, Gade, Schumann (3). Sonatinas from Clementi and Mozart (1). Two hymns. Ensemble work. Recital work (2).

Fifth Year.

Technical work. Progressive scale, arpeggio and chord study. Preparatory octave work.

First half of Grade 3. Etudes by Heller, Loeshorn, Czerny, Cramer and others (2). Pieces by Mendelssohn, Gade, Jadassohn, Jensen, Grieg, Schumann, Bendel and others (2). Easy preludes by Bach (1). Two hymns. Ensemble work. Recital work (2).

Sixth Year.

Technical work. Advanced study in scale, arpeggio and chord forms. Progressive octave work.

Complete Grade 3. Beginning work on Sonatas (1). Bach's Inventions (1). Field Nocturnes (1). Pieces from Hofmann, Kargenoff, Nevin, Moszkowski, Scharwenka, Schumann, Chopin and others (3). Three hymns. Ensemble work. Recital work.

HIGH SCHOOL COURSE.

First Year.

Careful study of the first half of Leschetizky's method. Bach's Inventions (2). Sonatas by Mozart and Beethoven (1). Etudes from Chopin, Heller, Moscheles and others (2). Pieces from Chopin, Chaminade, Mendelssohn, MasDowell, Schumann, Grieg, Brahms and others (3). Chapel work (six hymns). Recital work (2).

Second Year.

Complete Leschetizky's work. Bach's Inventions (2). Beethoven Sonatas (1). Six selected etudes and pieces from standard writers. Chapel work (six hymns). One concerto or two piano numbers. Recital work (2).

Third Year.

Careful study of Doerner's technical work. Bach Preludes and Fugues (1). One Sonata or Concerto. One accompaniment to song or violin for recital. Three selected pieces or etudes. Chapel work (six hymns). Recital work (2).

Fourth Year.

Applied Technic (teaching of two pupils under supervision). Four compositions from modern composers. Chapel work (two anthems). Recital work.

One composition learned without aid of teacher in two months for recital.

Graduating recital.

VOICE.

HIGH SCHOOL COURSE.

First Year.

Reading of braille. Position of body and mouth. Position of tongue. Breathing method explained. Single tone work. Simple studies in intervals. Diatonic scales. First twenty-five lessons in Concone. Two simple songs. Recital work (1).

Second Year.

Studies for sustaining the breath. Correct intonation for mingling tones. Advanced studies in intervals, Major and Minor. Chromatic scale. Phrasing of words. Last twenty-five Concone. Five songs. Recital work (2).

Third Year.

Positions of vowels and consonants. Scale work for clearness, speed and smoothness. Exercises in arpeggio and syncopation. Advanced studies from Abt, Sieber and others. Seven songs from American composers. Recital work (2).

Fourth Year.

Combination of position of tones and words in the mouth. Advanced studies in embellishments. Songs from the classics, Schumann, Schubert and others (10). Graduating recital.

VIOLIN.

First Year.

Position of violin and bow. Reading of braille. Elementary finger exercises. Dancla violin method (4). Harvest of flowers, collection of easy pieces (2). Recital work (1).

Second Year.

Scale work. Exercises for wrist. First book of Wohlfahrt studies. Elementary work in third position. Easy solos by Sitt, Herrmann, Dancle, Demuth, Harris, Palaschko, Allen and others (2). Recital work (2).

Third Year.

Scales in third position. Easy technical studies for bowing. First book of Kayser etudes. Solos from Becker, Hauser, Fischer, Cooper, Papini, Dancle, Raff, Bohm and others (4). Recital work (2). Chapel work (six hymns).

Fourth Year.

Second and fifth positions. Technical studies in scales and thirds. Kayser etudes, second book, first half. Beginning ensemble work. Solos from Thome, Schumann, Accolay, Raff and others (4). Recital work (2). Chapel work (six hymns). One sonata.

Fifth Year.

Fourth and sixth positions. Technical studies in positions and octaves. One concertino. Second half of Kayser's etudes Op. 20. Solos by Seitz, Bohm, Schumann, Goddard, Borowski, Raff, Seybold and others (5). Ensemble work. Chapel work (six hymns). Recital work (2).

Sixth Year.

All positions required. First book of Maza's etudes. Advanced technical studies for bowing. One easy concerto. Solos by Henri, Ern, Hauser, Sitt, Singelee, Papini and others (5). Chapel work (six hymns). Recital work (2.)

HIGH SCHOOL COURSE.

First Year.

Schradieck's method of scales. Maza's etudes, Book 2. Study of arpeggios and chords. Solos by Simonetti, Schumann, Wieniawski, Viotti and others (6). Chapel work (six hymns). Recital work (2).

Second Year.

Schradieck's technical studies, Book 1. Maza's etudes (2). Kreutzer etudes (1). One sonata from Mozart or Haydn. Solos by Vieuxtemps, DeBeriot, Bazzini or the old Italian School (2). Chapel work (six hymns). Recital work (2).

Third Year.

Schradieck's technical studies, Book 2. Kreutzer and Fiorillo etudes (2). One Bach study. One concerto by DeBeriot, Viotti or Rode. One obligato to a song. One solo by any of the above composers. Chapel work (six hymns). Recital work (2).

Fourth Year.

Schradieck's technical studies. Kreutzer and Fiorillo and Rode etudes (2). One Beethoven or Corelli sonata. One solo by a modern composer. Solos by Hubay, Vieuxtemps, Saint-Saens, Leonard, DeBeriot, Spohr, or some modern composer (1). One composition learned alone in two months. Must teach two pupils. Graduating recital.

ORGAN.

HIGH SCHOOL COURSE.

First Year.

Pupil must have at least five years of piano and read braille music. Position at organ. Arrangement of organ and mechanical appliances. Name, character and position of stops. Stainer organ method (six studies). Technical work for pedals. Two hymns. Recital work (1).

Second Year.

Complete Stainer method. Pedal studies by Dudley Buck (3). Four hymns. One anthem. Two pieces. Chapel work. Ensemble work. Recital work (2).

Third Year.

Dudley Buck pedal studies (complete). Bach easy preludes and fugues (2). Six hymns. Three anthems. Four selected pieces. Chapel work. Recital work (2).

Fourth Year.

Bach prelude and fugue (1). Four selected pieces. One concerto or sonata. Six hymns. Four anthems. One composition learned alone in two months. Graduating recital.

CHORUS WORK.

Senior Choir—Two standard hymns. Four anthems. Four mixed choruses. One chorus from an opera or an oratorio or a complete cantata. Special songs for Thanksgiving, Christmas and Easter.

Junior Choir—Ten hymns. Season songs. Songs for two and three part study. Special songs for Thanksgiving, Christmas and Easter. Appear twice in recital work.

MANDOLIN COURSE.*First Year.*

Reading braille. Finger exercises. Scale work. Easy solos (1). Recital (1).

Second Year.

First Book Henlein Method. Scale work. Technical studies. Solos (2). Recital (1).

Third Year.

First half of Second Henlein Method. Technical studies in third. Third and fifth positions. Solos by Lange, Tobani, Mascagni, etc. (2). Recitals (2).

Fourth Year.

First half of Second Henlein Method. Technical studies in third. Third and fifth positions. Solos by Lewis, Tobani, Singelee, Gillet (2). Concerted work (one composition). Recitals (2).

Fifth Year.

Technical studies in third and sixth. All Major and Minor scales. All positions. Concerted work (one composition). Solos by Lewis, Singelee, or any modern composer (3). Recitals (2).

HIGH SCHOOL COURSE.

	ONE REQUIRED.	ONE ELECTIVE.	REQUIRED.	REQUIRED.	ELECTIVE.
FIRST YEAR.	Piano, Voice, Organ, Violin.	Piano, Mandolin, Voice, Flute, Organ, Clarinet, Violin, Horn.	Theory or Chorus.	Recital Work.	Literary or Industrial.
	Piano, Voice, Organ, Violin.	Piano, Mandolin, Voice, Flute, Organ, Clarinet, Violin, Horn.	Theory or Chorus.	Recital Work.	Literary or Industrial.

INDUSTRIAL DEPARTMENT.

ZORA TOMLINSON, Broom and Chair Shop.*
 CARA B. FRENCH, Girls' Sewing Room.
 B. F. SMITH, Piano Tuning.
 WILLIAM RHOADES, Sloyd.*

The Industrial Department is of general interest to the blind. The principal trades taught are broom making, chair caning, piano tuning, sewing, crocheting, ornamental bead work and basket making. This year the following articles were manufactured:

House brooms	799
Factory brooms	113
Whisk brooms	216
Chairs caned	40
Wing brushes	147
Pillow cases	180
Sheets	34
Roller towels	43
Hand towels	143
Table cloths	44
Napkins	211
Girls' waists	3
Girls' dresses	2
Scarfs	5
Slippers (pairs)	18
Baby jackets	11
Hoods	4
Robe (slumber)	1
Raffia and rattan baskets.....	40
Pieces of bead work.....	60

*Chair a. m.; and Broom and Sloyd p. m.

Diplomas will be given from the Industrial Department upon the fulfillment of the following requirements:

1. The completion of the work of the eight grades in the literary department.

2. The completion of the work indicated in the following schedule:

	INDUSTRIAL—TWO HOURS DAILY	ELECTIVE—THREE PERIODS DAILY
NINTH YEAR.	Piano Tuning, or Boys' Workshop, or Girls' Workroom.	Music or Literary.
	Piano Tuning, or Boys' Workshop, or Girls' Workroom.	Music or Literary.
TENTH YEAR.	Piano Tuning, or Boys' Workshop, or Girls' Workroom.	Music or Literary.
	Piano Tuning, or Boys' Workshop, or Girls' Workroom.	Music or Literary.
ELEVENTH YEAR.	Piano Tuning, or Boys' Workshop, or Girls' Workroom.	Music or Literary.
	Piano Tuning, or Boys' Workshop, or Girls' Workroom.	Music or Literary.
TWELFTH YEAR.	Piano Tuning, or Boys' Workshop, or Girls' Workroom.	Music or Literary.
	Piano Tuning, or Boys' Workshop, or Girls' Workroom.	Music or Literary.

Hypatia..... Kingsley	*Prince of India..... Wallace	Corinne..... DeStael
Cymbeline..... Shakespeare	Timon of Athens..... Shakespeare	Coriolanus..... Shakespeare

*Read October 1, 1908.

GRADUATES' FUND.

In many cases pupils who have graduated from this Institution have not means to commence business. The cost of machinery and supplies for the shop is not great, but in many instances wholly beyond the reach of the graduates. Several attempts have been made to establish a fund to help worthy graduates. The following exhibit gives sources of this fund and the number of pupils assisted, as shown by the reports of the superintendents:

From unknown, January 27, 1862.....	\$100 00
From Silar Bond, May 11, 1863.....	27 16
From Mrs. Fitzpatrick, July 24, 1865.....	573 77
From unknown	99 25
Total	<hr/> \$800 18
Earnings to September 30, 1908.....	1,237 77
Total September 30, 1908.....	<hr/> \$2,037 95
Paid for machines and tools for sixty-seven graduates to September 30, 1908.....	1,191 69
Balance	<hr/> \$846 26

EARNINGS.

The earnings of the Institution are necessarily small, about the only source being the Industrial Department. As the purpose in this is to teach some form of industrial work to each pupil for relaxation, for physical development and for future use, and these pupils, as soon as they become proficient, generally engage in work for themselves, the finished output of the department is small. The total receipts for the past fiscal year were \$235.81,

CLOSING EXERCISES.

In June, the usual exercises were held on the completion of the work of the school year. The final concert was of the usual high order and the audience was a large and appreciative one. The following program was given in full:

CLOSING CONCERT.

8:00 P. M., TUESDAY, JUNE 2, 1908.

Piano Quartette, Capriccio Op. 22.....	<i>Mendelssohn</i>
Clarence Clark.	Mildred Huston.

Vocal Solo—"The Lark Now Leaves His Watery Nest".....*Parker*

Miss Fisher.

Presentation of Diplomas.

Benediction.

THE NINETEENTH BIENNIAL CONVENTION OF THE AMERICAN ASSOCIATION OF INSTRUCTORS OF THE BLIND.

The Nineteenth Biennial Convention of the American Association of Instructors of the Blind was held at the Indiana School for the Blind at Indianapolis, Ind., on July 14, 15 and 16. There were about seventy-five teachers and superintendents present from twenty-seven different schools.

Mayor Chas. A. Bookwalter gave the welcome address in his usual forcible and pleasant style.

The following were the topics treated in papers prepared for the occasion:

1. "The Progress and Present Condition of the Work for the Blind in the United States."—Superintendent Geo. S. Wilson, Indianapolis, Ind.
2. "The Classification of the Schools for the Blind in the Educational System of the State."—Superintendent E. E. Allen, Boston, Mass.
3. "Educational Waste in the Schools for the Blind."—Superintendent O. H. Burritt, Philadelphia, Pa.
4. "Proper Age of Admission and Period of Retention of Pupils."—Superintendent Warring Wilkinson, Berkeley, Cal.
5. "Discipline in Schools for the Blind."—Superintendent G. W. Jones, Jacksonville, Ill.
6. "Retention of Incurables."—Superintendent J. H. Johnson, Talladega, Ala.
7. "Primary and Academic Courses."—Superintendent Thos. McAloney, Pittsburg, Pa.
8. "Manual Training."—Superintendent Harvey Clark, Janesville, Wis.
9. "Essentials and Methods of Instruction of the Music Course."—Superintendent Jas. T. Rucker, Romney, W. Va.
10. "Methods of Teaching Reading, Writing, Etc."—Superintendent J. J. Dow, Faribault, Minn.
11. "Exchange of Teachers."—Superintendent John F. Bledsoe, Baltimore, Maryland.

The above papers were well prepared and the discussions were interesting and profitable.

An invitation from the Governor of Arkansas to hold the next convention at Little Rock was presented by Supt. Lucas. This invitation was accepted.

The officers selected for the ensuing two years were as follows :

President, Supt. B. B. HUNTOON, Louisville, Ky.

First Vice-President, Supt. LUCAS, Little Rock, Ark.

Second Vice-President, Supt. JOHN E. RAY, Raleigh, N. C.

Recording Secretary, Supt. THOS. MCALONEY, Pittsburg, Pa.

Corresponding Secretary, Supt. WM. B. WAITE, New York City,
New York.

Treasurer, Supt. G. W. JONES, Jacksonville, Ill.

Executive Committee :

Supt. BURRITT, of Philadelphia, Pa.

Supt. DOW, of Faribault, Minn.

Supt. BLEDSOE, of Baltimore, Md.

Supt. MOREY, of Nebraska City, Neb.

Supt. GREENE, of St. Louis, Mo.

The states represented were Alabama, Arkansas, Colorado, Florida, Georgia, Illinois, Indiana, Kansas, Kentucky, Maryland, Massachusetts, Minnesota, Missouri, Montana, Nebraska, New York, North Carolina, Ohio, Oregon, Pennsylvania, South Carolina, South Dakota, Texas, West Virginia, Wisconsin and Ontario, Canada.

The music was furnished by pupils from the local school. Supt. Geo. S. Wilson was President and Supt. B. B. Huntoon the Secretary. The attendance was very satisfactory, twenty-seven of the forty schools of North America being represented.

STATISTICAL FORM FOR STATE INSTITUTIONS.

Prepared in Accordance with a Resolution of the National Conference of Charities and Correction, Adopted May 15, 1906.

INDIANA SCHOOL FOR THE BLIND.

POPULATION.

1907-08.

	Male.	Female.	Total.
Number of inmates present at beginning of the fiscal year	55	70	125
Number received during the year.....	10	15	25
Number discharged or died during the year....	12	16	28
Number at end of fiscal year.....	54	74	128
Daily average attendance (i. e., number of inmates actually present) during year.....	53.22	70.16	123.38
Average number of officers and employes during the year	25	17	42

EXPENDITURES.

1907-08.

Current expenses—

1. Salaries and wages.....	\$22,284 61
2. Clothing	
3. Subsistence	8,499 20
4. Ordinary repairs	2,498 82
5. Office, domestic and outdoor expenses.....	7,712 28

Total\$40,994 91

Extraordinary expenses—

1. New buildings, lands, etc.....	\$1,172 95
2. Permanent improvements to existing buildings.....	
3. Engine, stoker, boiler and boiler setting.....	1,973 66

Total \$3,146 61

Total current expenses.....\$40,994 91

Total extraordinary expenses 3,146 61

Grand total\$44,141 52

NOTES ON CURRENT EXPENSES.

- Salaries and wages include salaries of trustees.
- Clothing includes shoes and also materials for clothing and shoes made in the institution.
- Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions are classed with "permanent improvements."
- This item includes everything not otherwise provided for, *e. g.*, furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.

APPROPRIATIONS.

The same regular appropriations we are now receiving will probably be sufficient for the ensuing two years. It will be necessary to ask the Legislature for a special appropriation to repair the outside of the main building. The cement covering is disintegrating in many places and the wood work now needs renewal. The whole exterior should be repainted.

I earnestly urge you to again request a special appropriation to construct a dormitory for the boys similar to the one occupied by the girls. In order to provide safety and proper supervision of the boys and to secure most efficient school work, this is necessary.

Five successive Legislative Commissions have had the matter under consideration and in each case have recognized the justice and necessity of the request but for different reasons have felt it inadvisable or impossible to grant it.

The Commission of 1899 made the following report: "The Committee does not feel justified in recommending any expenditure for extensive repairs or buildings for the reason that it believes that the property belonging to this Institution should be disposed of. * * * We urgently recommend that new land be purchased—new and modern buildings erected thereon and thus accomplish two purposes: First—To relieve the crowded condition of the present Institution. Second—To provide buildings which will meet the wants of the future years and at the same time provide modern and convenient homes for the inmates thereof."

An effort was made in the session of the Legislature of 1899 to change the location of the Institution and to erect new buildings, but this failed because of the opposition of the representatives of Marion County. Nothing was therefore done to relieve the dangerous condition existing.

The question was considered by the Commission of 1901, which made the following report to the Legislature: "This Institution (the blind) is located almost in the heart of the city of Indianapolis. * * * It is in a crowded condition, the building (main) is old, out of date, and sadly in need of repair. No Institution for the Blind should, in the judgment of the committee, be built exceeding two stories in height, while the principal building of this Institution is five stories high. * * * The Committee believes that the best interests of the State can be subserved by moving this Institution and re-locating it outside the city limits of Indianapolis." A bill to move the Institution was introduced, which passed one house

but was defeated in the other. Again the matter was dropped, but the danger to the children still continued.

While the question of removal was before the Legislature the Superintendent and Trustees did not insist upon the erection of new buildings upon the old site. It would have been a waste of money to have made extensive improvements and then to have moved the Institution to another location. When the recommendations of two successive Legislative Commissions had been defeated, it seemed that the question of re-location was definitely settled, at least for the next generation, in favor of the present site. This being true, the Institution authorities decided that two dormitories ought to be built and that the old main building should be used only for school purposes.

The request was made of the Legislative Commission of 1903 for a dormitory for the girls and one for the boys. The Commission considered this request and recommended the appropriation for the girls' dormitory with the statement that the one for the boys was also needed but was not so imperative that it could not wait until the session of 1905.

The girls' dormitory was built the following summer and relieved the situation greatly in so far as the girls were concerned. The boys remained in the old building, subject to the inconvenience of the antiquated structure and exposed to the danger from fire.

The Commission of 1905 studied the situation, recognized the need for a dormitory for the boys, but in consideration of the fact that the demands exceeded the revenues of the State, reported that the construction of the boys' dormitory could be deferred until the next session of the Legislature.

The Commission of 1907 considered the request for the dormitory for the boys and the request was granted until in the summary it was ascertained that more money had been recommended than the State could furnish. Under the pressure of heavy demands by the larger institutions, it was found impossible to furnish the money for this building and again the boys had to wait.

I believe all of the Commissions cited have recognized the need of the boys' dormitory. No doubt, the Commissions in the past have done the best possible and have used the income of the State where it was most needed, but I feel that this school has waited long for an improvement which any person cognizant of the condition of this school will readily concede. I therefore urge the appropri-

tion for the boys' dormitory in order to obviate the following conditions:

1. School work cannot be satisfactory when the bed rooms and sitting room of the boys and the school rooms are on the same floors in the same building—the one interfering with the other.

2. The girls must be excluded from the school building while it is used as a boys' dormitory except during school hours when they are under the supervision of the teachers. This materially interferes with their use of the gymnasium, the pianos and school apparatus generally.

3. The construction of the main building is such that proper supervision of the boys cannot be given under the existing dormitory arrangements.

4. There are no detached hospital accommodations. A contagion would completely stop school work and endanger the lives of the pupils.

5. The lavatory accommodations for the boys are general. Contagious eye troubles are communicated by this common use. There should be separate accommodations for the boys similar to those provided for the girls.

6. The sleeping rooms of the boys are on the third, fourth and fifth floors. The building is old (built in 1852). The superstructure is largely wood (yellow poplar). There are no fire escapes. Fire once started in the upper part of the building would soon be beyond control. Under ordinary pressure, the water will not reach the upper parts of this high building. The enormous amount of dry timbers would make an exceedingly dangerous fire. A serious fire, therefore, might cause an appalling loss of life.

The construction of a dormitory for the boys would obviate these difficulties. The advantage of having the schools separated from the living rooms, a thorough separation of the sexes, a reasonable guard against contact with contagious eye troubles, proper school accommodations and sleeping rooms for the boys free from the dangers of fire, are so apparent that there should be little delay in building the dormitory if the money necessary is at all available. The old building would not more than furnish sufficient room for efficient school work and meet the other requirements which would be placed upon it.

I have dwelt at considerable length upon the need of this dormitory. It is because I feel that it is almost imperatively necessary in order to properly care for the boys and make most efficient school work. I hope there will be no hesitation in making this appropriation because of the thought of moving this school. Whatever may be done in the remote future, I am sure, guided by the past experience, that this removal will not take place in the next generation.

Respectfully,

GEORGE S. WILSON,
Superintendent.

INFORMATION.

1. The purpose of this Institution is purely educational. The aim is to give a practical education to the young blind of both sexes residing in the State. All the common school branches are taught. An extensive course in music is available to all who have talent in this direction. A thorough course is given in several industrial trades, such as broom making, cane seating chairs and piano tuning. The girls learn sewing by hand and machine, knitting, crocheting, bead and fancy work. The purpose is to make the pupils useful, contented, self-supporting citizens. A gymnasium is equipped and a special teacher drills the pupils in systematic physical exercises. Pupils, when not in recitation, are in charge of a governess.

2. The school year commences on the fourth Wednesday of September and continues for nine months. There is no vacation during the session.

3. Applicants who are under eight or over twenty-one years of age are not admitted.

4. No person of imbecile or unsound mind, or of confirmed immoral character will be knowingly received into the Institution, and in case any pupils shall, after a fair trial, prove incompetent for useful instruction or disobedient to the regulations of the Institution, such pupils will be thereupon discharged.

5. The Institution is maintained by the State, and tuition, board and washing are furnished free of cost to all pupils residing in Indiana. The parents or friends of pupils must supply them with comfortable clothing, suitable for summer and winter wear, in such quantity as will admit of necessary changes. Each article of clothing should be distinctly marked with the owner's name and must be sent in good condition. The traveling expenses of pupils must be defrayed by parents or friends.

6. It is positively required that every pupil shall be removed from the Institution during the annual vacation of the school, as well as at any other time when such removal may be deemed necessary by the proper officers thereof; and in case of failure of friends of any pupil to comply with this requisition, provision is made by the law for sending such pupil to the trustee of the township in which he resides, to be by him provided for at the expense of the county.

7. Parties desiring the admission of a pupil are required to fill up the required form of application and forward the same to the

Superintendent of the Institution, giving truthful answers to the interrogatories therein contained, and procuring the signature of a justice of the peace to the certificate thereunto attached; and the pupil must in no case be sent until such application shall have been received and favorably responded to by the Superintendent.

8. The Superintendent will cheerfully give information in regard to the Institution, and will thankfully receive any information concerning those who should be receiving its benefits.

9. Persons bringing pupils to the Institution or visiting them can not be accommodated with board and lodging.

10. That the work of the Institution may be done to the highest good of all it is necessary that every pupil shall be present at the opening of the term. Faithful work and prompt and regular attendance are essential to advancement and promotion. No pupil who is tardy at the beginning of the term can hope to do acceptable work and receive promotion. Unless there is an excellent reason for doing otherwise, every pupil should be present on the first day and remain throughout the term.

11. Each pupil before entering the Institution should be supplied with the following clothing of good quality:

Boys.—Two hats, two suits of clothes, two extra pairs of pants, four pairs of socks or six pairs of stockings, four shirts, two suits of underwear, two pairs of shoes, six handkerchiefs, two pairs of suspenders, a tooth brush, a clothesbrush, and a comb and hairbrush. Small boys need no suspenders, but should be supplied with an extra suit of underwear.

Girls.—Two woolen and two cotton dresses, four aprons, three night dresses, two suits of summer and three of winter underwear, two dark and two light skirts, six pairs of stockings, six handkerchiefs, a wrap, a hat, rubbers, two pairs of shoes, a tooth brush, a clothesbrush, a comb and hairbrush.

This amount of clothing will be necessary within the year, that the children may be kept clean and comfortable. When parents are not able to furnish the required clothing they should not hesitate to call upon the township trustee, who will cheerfully provide for the needs of those who are worthy. All clothing should be marked with indelible ink.

12. It will be necessary for parents, guardians, etc., to provide for all incidental expenses of pupils. It will likewise be necessary for all persons sending children to the Institution to furnish them transportation to their homes at the close of the term.

LIST OF INSTITUTIONS FOR THE EDUCATION OF THE BLIND IN THE UNITED STATES.

- Alabama Institution for the Deaf, Dumb and Blind, Talladega, Ala.—
J. H. Johnson, Principal.
- Alabama School for the Blind, Talladega, Ala.—F. Manning, Superin-
tendent.
- Alabama School for Negro Deaf Mutes and Blind, Talladega, Ala.—J. S.
Graves, Superintendent.
- Arkansas School for the Blind, Little Rock, Ark.—F. D. Lucas, Super-
intendent.
- California Institution for the Education of the Deaf and Dumb and Blind,
Berkeley, Cal.—W. Wilkinson, Principal.
- Colorado School for the Deaf and the Blind, Colorado Springs, Col.—
W. K. Argo, Superintendent.
- Connecticut School for the Blind, Hartford, Conn.—G. A. Marshall, Su-
perintendent.
- Florida School for the Blind, Deaf and Dumb, St. Augustine, Fla.—A. H.
Walker, President.
- *Georgia Academy for the Blind, Macon, Ga.—G. F. Oliphant, Principal.
- Idaho State School for the Blind, Boise City, Idaho.—J. Watson, Super-
intendent.
- Illinois School for the Blind, Jacksonville, Ill.—G. W. Jones, Superin-
tendent.
- Indiana School for the Blind, Indianapolis, Ind.—Geo. S. Wilson, Super-
intendent.
- Iowa College for the Blind, Vinton, Iowa.—J. E. Vance, Principal.
- Kansas Institution for the Education of the Blind, Kansas City, Kansas.—
W. B. Hall, Superintendent.
- *Kentucky Institution for the Education of the Blind, Louisville, Ky.—
B. B. Huntoon, Superintendent.
- Louisiana Institution for the Blind, Baton Rouge, La.—W. W. Bynum,
Superintendent.
- *Maryland School for the Blind, Baltimore, Md.—John F. Bledsoe, Super-
intendent.
- Massachusetts School and Perkins Institution for the Blind, South Boston,
Mass.—E. E. Allen, Director.
- Michigan School for the Blind, Lansing, Mich.—Clarence E. Holmes, Su-
perintendent.
- Minnesota School for the Blind, Faribault, Minn.—J. J. Dow, Superin-
tendent.
- Mississippi Institution for the Blind, Jackson, Miss.—W. S. Sims, Super-
intendent.
- Missouri School for the Blind, St. Louis, Mo.—S. M. Green, Superintendent.
- Montana School for the Deaf and Blind, Boulder, Mont.—L. E. Milligan,
Superintendent.
- Nebraska Institution for the Blind, Nebraska City, Neb.—J. T. Morey,
Superintendent.
- New Mexico Institution for the Blind, Alamogordo, N. M.—S. H. Gill,
Superintendent.

* Has a department for the colored blind.

- New York Institution for the Blind, New York, N. Y.—Everett B. Tew'sbury, Principal.
- New York State School for the Blind, Batavia, N. Y.—C. A. Hamilton, Superintendent.
- *North Carolina School for the Deaf and Blind, Raleigh, N. C.—John E. Ray, Principal.
- North Dakota School for Blind, Bathgate, North Dakota.—B. P. Chapple, Superintendent.
- Ohio State School for the Blind, Columbus, Ohio.—Edward M. Van Cleve, Superintendent.
- Oklahoma Institution for Deaf, Dumb and Blind, Wagoner, Oklahoma.—C. E. Harmon, Superintendent.
- Oregon Institute for the Blind, Salem, Ore.—E. T. Moores, Superintendent.
- Pennsylvania Institution for the Instruction of the Blind, Overbrook, Pa.—O. H. Burritt, Superintendent.
- *South Carolina Institution for the Education of the Deaf and the Blind, Cedar Spring, S. C.—N. F. Walker, Principal.
- School for the Blind, Gary, S. D.—Miss Dora Donald Humbert, Superintendent.
- *Tennessee School for the Blind, Nashville, Tenn.—J. V. Armstrong, Superintendent.
- Texas State Institution for the Blind, Austin, Tex.—S. L. Hornbeak, Superintendent.
- Texas Institution for the Deaf, Dumb and the Blind (Colored), Austin, Tex.—H. S. Thompson, Superintendent.
- State School for the Blind, Ogden, Utah.—Frank M. Driggs, Superintendent.
- Virginia Institution for the Education of the Deaf and Dumb and of the Blind, Staunton, Va.—W. A. Bowles, Principal.
- Washington School for the Blind, Vancouver, Wash.—Thos. P. Clarke, Superintendent.
- Western Pennsylvania Institution for the Blind, Pittsburgh, Pa.—Thos. S. McAloney, Superintendent.
- West Virginia School for the Deaf and the Blind, Romney, W. Va.—Jas. T. Rucker, Principal.
- Wisconsin School for the Blind, Janesville, Wis.—Harvey Clark, Superintendent.

* Has a department for the colored blind.

SECOND REPORT

OF THE

BOARD OF TRUSTEES

OF THE

Indiana Girls' School

For the Year Ending September 30, 1908

To the Governor

INDIANAPOLIS:

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING

1909

THE STATE OF INDIANA.

EXECUTIVE DEPARTMENT,

December 22, 1908.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,

INDIANAPOLIS, January 4, 1909.

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

JOHN C. BILLHEIMER,

Auditor of State.

January 4, 1909.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,

Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, January 4, 1909.

FRED A. SIMS,

Secretary of State.

Received the within report and delivered to the printer January 4, 1909.

HARRY SLOUGH,

Clerk Printing Board.

LOCATION.

The Indiana Girls' School is located about seven and one-half miles northwest of Indianapolis.

It can be reached any hour by Ben Hur Traction or the Peoria division of the Big Four Railroad.

Mitchellville stop, on the C., H. & D., is but half a mile distant.

REPORT OF BOARD OF TRUSTEES.

To the HON. J. FRANK HANLY, Governor of Indiana:

We submit the second annual report of the Indiana Girls' School for the fiscal year ending September 30, 1908.

Considering the difficulties encountered in adjusting the School to the new conditions, the year's work has been satisfactory. There have been many changes among the officers. The Superintendent, Miss Sarah L. Montgomery, resigned in March. The Assistant Superintendent, Miss Charlotte Dye, was made Acting Superintendent, beginning her duties the first of April. The meager returns from the garden and farm was a great disappointment, and accounts to some extent for the deficit in running expenses.

There were two causes for this failure. First, the soil on the upland is very poor and exhausted, and the few acres of good, tillable bottom land are not adequate for our needs. The general drought dwarfed much of the garden supplies. The question of water supply has been a source of constant anxiety, and is not yet entirely solved. The deep wells put in at much expense proved of little value. We have had to depend upon surface wells, springs and the little creek for our entire supply for family, boilers, and stock, with none to spare for sprinkling lawns or garden.

A small reservoir was placed in a little stream which is fed by springs, which helped to furnish what is pumped into the tank that supplies the cottages. The amount is so limited that unless some more adequate supply is provided the institution may face a water famine at any time. In case of fire there would be no water protection.

The septic tank and sewer system have been very unsatisfactory.

A system of filter beds has been recommended, and the General Assembly in special session was asked for five thousand dollars to put in what is needed to insure a satisfactory solution of the sewage question.

The specific appropriation of twenty-five thousand dollars (\$25,000) for a new cottage, and six thousand five hundred dollars (\$6,500) for cold storage and storehouse have been exhausted and the buildings not quite completed. Additional appropriations of seven thousand dollars (\$7,000) for the completion of the cot-

tage, and two thousand dollars (\$2,000) to complete the cold storage, the sum of ten thousand dollars (\$10,000) to build a main to carry heat and water from the powerhouse to the new cottage, and six thousand dollars (\$6,000) to furnish and equip these buildings for use was asked from the General Assembly in special session.

The appropriation of thirty-eight thousand dollars (\$38,000) for maintenance, which was supposed to be supplemented by products from the farm, which were very limited, was exhausted in May, and not all bills of May could be paid. The bills for the balance of May, June and July were sent to the Governor for payment. The bills for August and September were referred to the General Assembly in special session, and an appropriation for their payment was asked.

The three thousand dollars (\$3,000) appropriated for a cow and horse barn have not been used. Bids were advertised for and received at two different times, but no satisfactory contract could be made for the erection of barns for this amount. The fact that we are dependent upon surface wells and springs makes it hazardous to have barns located on the grounds from which we draw our water supply. For this reason we respectfully ask you to recommend to the next General Assembly the purchase of a small tract of land across the road, consisting of about twelve acres with a brick house and frame barn and other outbuildings upon it, which would enable us to remove all stables and hog pens away from our wells and springs, and furnish a house for our farmer.

The amount and quality of our tillable land will not furnish garden produce for the family nor feed and pasture for cows, so that if we are to become more nearly self-supporting in a farming way at least a hundred or more acres should be added to our farm.

The educational lines of our work have not been as extensive as they should be to make this a first-class school of its kind. Our appropriation would not permit the equipment or officers to carry out ideas needed to place us in line with like institutions in other states.

In addition to a larger appropriation for maintenance, we need a repair fund, library fund and specific appropriation for an administration building and two new cottages.

The Board of Trustees has estimated and determined the actual expense per annum of subsisting an infant committed to the Indiana Girls' School, as required by Burns' R. S. 1901, section 8281, at \$253.00. The counties from which the girls come pay one-half of this amount.

FINANCIAL STATEMENT.

Total Appropriations.

Total appropriations	\$154,750 00
Farm products	1,310 23
Unused specific appropriations	24,902 00
Unexpended balances turned into State Treasury	247 62
Amount paid by the Governor from emergency fund	8,944 95
Amount asked from the General Assembly for maintenance	8,000 00
Average daily attendance	218.38
Cost per capita	253 00
Total expenditures, including specific appropriations for new buildings and assistance asked from the Governor and Gen- eral Assembly at special session	107,571 32
Not including value of farm products.	

Appropriations Needed for Next Year.

Maintenance	\$75,000 00
Repair fund	8,000 00
Twelve acres of land with house and barn	6,000 00
Administration building	32,000 00
Two cottages	70,000 00
Root cellar	1,000 00
Walks, drives and electric lights in the campus	10,000 00
Additional boiler with extension to power house, approximately.	16,000 00
Additional farm land	20,000 00

The reports of the Acting Superintendent, Secretary, Visiting Agent and Physician which follow will give in detail the year's work in the school.

We are under obligations to the Governor and other state officers and many friends for assistance and suggestions which have been helpful in our work.

Respectfully submitted,

EMMA LEE ELAM, President.
ISABELLE J. BELL, Vice-President.
LOTTIE W. CALDWELL, Treasurer.
SARAH E. CAMPBELL, Secretary.

NOTE.—The \$6,000 appropriated by the General Assembly in 1907 for pumps, air lift and equipment, architects' fees, cistern, salary of superintendent of construction and such unpaid expenses were used by the commissioners and did not pass through the hands of the Board of Trustees.

ACTING SUPERINTENDENT'S REPORT.

To the Board of Trustees of the Indiana Girls' School:

I hereby submit the following report for the year ending September 30, 1908:

Although I have been in charge of the work only since April 23d, I take great pleasure in saying that the good work which was begun a year ago last July has gone steadily on, gaining in strength and usefulness from day to day and accomplishing more and more in upbuilding and perfecting the characters of this class of children.

The spirit of ambition, kindness and appreciation in these children proves that the work is effective of good results. I must confess that it was with some misgiving that I entered into this work where doors and windows are with few exceptions unguarded, fearing the girls would take advantage of their liberty and cause much trouble by escaping. Now I am glad indeed to be able to report that although at first many did leave us, the honor system is gaining in strength each month and within the past year we have had but few escapes. Hence if I were now to choose between bars and no bars, I should say in terms most emphatic "No bars" except on one cottage and the hospital.

When our new cottage for the more incorrigible girls is ready for occupancy we believe the greatest problem in the discipline of our school shall have been solved. We have but a limited number of girls who are so unfortunate as to possess extremely overwrought nervous systems or depraved and vicious natures which makes it unwholesome for others to live with them, and many of these should receive treatment and not punishment. If we could have the proper equipment and an adequate amount of help, I am confident that we could avert many a brain storm and keep the patient in a pleasant frame of mind and the whole family would profit by the treatment.

The general plan of the work is very much the same as was described in last year's report. The entire family is divided into seven groups, each one occupying a cottage. The colored girls occupy one of the largest cottages and are as happy as girls can be.

In each cottage are two women efficient and forceful in char-

acter, who train the girls in different phases of housework. The Director has charge of the cottage and is responsible for its success. She has charge of the clothing, oversees the making and mending, teaching each girl to keep in order her own clothing. She also oversees their personal needs, bathing, study hours and recreation periods; their moral and religious training are in a great measure her responsibility also. In fact she does for the children all that an intelligent and capable mother should do.

For an assistant the Director has a woman who is equally important in her line of work. She has charge of the kitchen, dining-rooms, and cellars. In these departments the girls spend one-half of each day in their turn, for a period of three months. To this course will soon be added a course in scientific cooking. In no department can we find happier girls than in our kitchens. The pride of a girl who exhibits a beautiful loaf of bread of her own baking is only equalled by that of one who can show a neat piece of needlework. Plain, neat hemming by hand is fast taking the place of machine work. Even the youngest children take pride in their sewing.

In addition to this course in domestic training we are planning to have classes in sloyd, basketry, millinery, torchon lace making, chair caning, knitting, tatting, embroidery, crocheting, Mexican drawn work, knitting hosiery, carpet weaving and piano lessons. All are receiving instruction in vocal music in school.

In our garden are about forty acres. This is cared for by the girls under the direction of a gardener. A woman gardener is usually with them, but it is no uncommon sight to see a group of girls working under the direction of one of her companions. (See garden report elsewhere).

Each girl goes to school half a day unless prevented by illness or some other reasonable cause. We have a corps of efficient, optimistic teachers under the supervision of a most excellent principal. Our course of study is selected from Marion County and State courses. Nature work is receiving much attention.

During the summer months a series of entertainments varied the monotony of the daily routine. Most of these were given free of charge by friends from Indianapolis and vicinity.

In connection with our regular physician who visits the school three times a week we have a graduate nurse in whose care are all sick and convalescent girls. An oculist and dentist have been in attendance at stated times throughout the year.

As soon as the girls have taken the stipulated amount of train-

ing and shown by such improvement that they are ready to take their places in the world at large, they are placed in homes, sometimes in their own but more often in homes of others. Some are taking nurse's training, some a course in music, a goodly number have married and have comfortable homes of their own. The greatest number are helpers in homes at an average wage of two dollars and a half per week, and many of them have creditable bank accounts.

All this adds much to our care and responsibility, often requiring letters, telephone messages, and frequent visits from our one agent who tries to cover the entire State at least three times a year, besides the emergency cases. We require the children to report to us each month, and we try to answer every letter which reaches our desk. We are in great need of another agent in order that this good work may be more efficient.

I include here a few items from report of Visiting Agent:

Number of homes investigated	295
Number of homes approved	217
Number of visitations to children on ticket-of-leave	300
Number of special visitations in interest of children	134
Number of children placed on ticket-of-leave once	114
Number of children placed on ticket-of-leave twice	35
Number of children placed on ticket-of-leave three times	13
Number of children placed on ticket-of-leave four times	7
Number of children placed on ticket-of-leave five times	1
Number of children placed on ticket-of-leave six times	1
Number of children who came of age while on ticket-of-leave.....	35
Number of children returned for various reasons	179
Per cent. now in homes doing well	83
Number of confinement cases	4

The reports of the physician, oculist, and dentist will be found elsewhere.

I wish to express my appreciation of the most hearty support of the Governor and each member of the Board, and the loyal support and hearty sympathy of each officer in the institution.

CHARLOTTE DYE,
Acting Superintendent.

REPORT OF VISITING AGENT.

To the Superintendent:

I beg leave to submit the following report of work done during the fiscal year ending September 30, 1908.

Number of homes investigated	295
Number of homes approved	217
Number of visitations to children on ticket-of-leave	300
Number of special visitations in interest of children	134
Number of children placed on ticket-of-leave once	114
Number of children placed on ticket-of-leave twice	35
Number of children placed on ticket-of-leave three times	13
Number of children placed on ticket-of-leave four times	7
Number of children placed on ticket-of-leave five times	1
Number of children placed on ticket-of-leave six times	1
Number of children who came of age while on ticket-of-leave.....	35
Number of children returned for various reasons	179
Per cent. now in homes doing well	83

Respectfully submitted,

NAN B. WOOD.

Visiting Agent.

REPORT OF PHYSICIAN.

To the Acting Superintendent of the Indiana Girls' School:

The following report is respectfully submitted for the hospital for the fiscal year ending September 30, 1908.

The total number of cases of illness treated in the hospital was two hundred and sixty-six.

The number of girls receiving medical care and cases treated for each month was as follows:

Month.	Girls.	No. Cases.
October	18	20
November	26	36
December	35	35
January	52	62
February	67	73
March	43	51
April	38	41
May	26	29
June	26	26
July	25	28
August	24	26
September	20	21

The following diseases were treated in the hospital:

Disease.	No. Cases.
Incipient pulmonary tuberculosis	4
Acute bronchitis	1
Catarrhal influenza	2
Acute colds	44
Tonsilitis	70
Inflammatory rheumatism	5
Muscular rheumatism	3
Nasal catarrh	3
Atrophic rhinitis	1
Anemia	7
Pregnancy	9
Miscarriage	1
Childbirth	1
Local treatment for specific diseases	20
Gonorrheal abscesses	3
Gonorrhea (white)	7
Specific endometritis	2

Primary syphilis	3
Secondary syphilis	3
Impacted bowels	3
Extraction of needle from throat	1
Asthma	1
Hay fever	1
Chronic pharyngitis	2
Facial erysipelas	1
Acute otitis media	1
Neuralgia	2
Acute indigestion	4
Acute diarrhoea	2
Biliousness	10
Hemorrhoids	1
Sprained ankle	3
Cut of hand	1
Fractured nose	1
Bruised knee	1
Splinter in foot	1
Scrofula of neck	1
Eczema of the body and head.....	2
Scabies of the body.....	17
Pediculi capitis	20
Rhus poisoning	1

A number of minor ailments occurred and general tonic treatment was given at the cottages in addition to the cases treated at the hospital.

Dr. W. F. Hughes, of Indianapolis, visited the School and examined seventy girls for diseases of the eye and refractive errors.

Forty-four girls were found to have errors of refraction and glasses were prescribed for this number.

Twelve girls were found to be suffering from some disease of the eye as follows:

Disease.	Cases.
Opacity of cornea	5
Leucoma	1
Nystagmus	1
Anterior polar cataract	2
Tracoma	5
Central choroiditis	3
Anterior staphyloma	1
Blepharitis marginalis	1

One hundred and nineteen girls, one hundred white and nineteen colored, were received and a physical examination made and recorded.

A physical examination was also made of seventy-six returned girls.

A physical examination is made and a health certificate recorded of all girls given leave of absence.

Of a total number of girls received thirty-three were virgins, the others admitted having at some time been immoral.

Seven were suffering from gonorrhea, three from primary and three from secondary syphilis when admitted. The general health of a great many was poor on admission to the School.

Five girls were pregnant when admitted and four were returned from leave of absence in a pregnant condition.

Sixty-six girls were successfully vaccinated.

One death occurred from acute general tuberculosis. Dr. Chas. F. Neu of Indianapolis and Dr. A. O. Ruse of Clermont were called once in consultation.

One hundred and fifteen professional visits were made to the School during the year.

We have been free from fevers or epidemics of any kind and the general health of the girls has been excellent.

Respectfully,

DR. MARTHA J. SMITH.

REPORT OF DENTAL SURGEON.

To Miss Charlotte Dye, Superintendent:

I hereby submit the following report of the dental work done during the fiscal year ending September 30, 1908.

Number of girls visiting the hospital for dental examination.....	187
Number to receive dental treatment.....	142
Number of amalgam fillings.....	285
Number of teeth devitalized and filled	46
Number of treatments for abscess, pyorrhea, gingivitis, etc.....	51
Number of cement fillings	29
Number of gold fillings	9
Number of gold crowns	5
Number of porcelain crowns	1
Number of teeth extracted	65

For this work I have received \$358.25, \$153.52 of which has been paid by the girls and \$204.73 by the State.

When I began my work at the School a year ago I found the girls' teeth in a very bad condition. Many of them were suffering from aching or abscessed teeth. These have all been and are now being treated or extracted until the number of cases of suffering has been reduced to a minimum.

At that time the girls had become negligent as to dental hygiene and prophylaxis. This condition is also much improved.

In concluding this report I desire to express my appreciation of and thanks for the confidence reposed in me by you and your predecessor, Miss Montgomery, and by the Board of Trustees.

Thanking Miss Pierson and her predecessor, Miss Stephenson, for their valuable assistance in this work, and the officers and girls for their kindness and courtesy at all times, I am,

Very respectfully,

CHESTER C. MILLER, D. D. S.

REPORT OF SECRETARY.

To the Superintendent:

The following pages will show the financial and statistical tables of the Indiana Girls' School for the fiscal year ending September 30, 1908.

Respectfully,

SARA E. DOWNING,
Secretary.

GIRLS' INDUSTRIAL SCHOOL.

(1869 S., p. 61. In force May 13, 1869.)

8254. (6162): *Established*. 1. There shall be established as soon as possible after the taking effect of this act, at or near the city of Indianapolis, an institution to be known as the "Indiana Reformatory Institution for Women and Girls."

Diminution of time for good behavior.—Sections 8238-8241.

Home for Friendless Women.—Sections 8243-8350.

The penal department created by this act is a State Prison, and the act of April, 1881, concerning public offenses and their punishment, did not repeal any of the provisions of this act.—Walton v. State, 88 Ind. 9.

(Acts 1899, p. 22. In force February 7, 1899.)

8255. *Name Changed*. 1. That the name of the State institution known as the Reform School for Girls and Women's Prison be changed. That hereafter, said institution shall be, and they are hereby declared to be separate and distinct; the first of said institutions to be named and known as the "Indiana Industrial School for Girls," the second institution to be named and known as the "Indiana Womans Prison."

8255a. *Laws Applicable*. 2. All laws in force respecting the said "Reform School for Girls and Womans Prison," including the management thereof, shall, as far as applicable thereto, apply and continue to these separate institutions.

(1877, p. 64. In force March 3, 1877.)

8256. (6163.) *Board of Managers to be Women—Board of Audit*.

2. The general supervision and government of said institution shall be vested in a Board of Managers consisting of three persons, who shall be women, to be known and designated as the "Board of Managers of the Indiana Reformatory Institution for Women and Girls." The members of the first board to be appointed under this act shall be Mrs. Emily A. Roache, Mrs. Rhoda M. Coffin and Mrs. Eliza Hendricks, whose term of office shall be, respectively, two, four and six years, said terms of office to expire in the same order as the names occur in this act. As vacancies subsequently occur

in the Board, their successors shall be appointed by the Governor, by and with the advice and consent of the Senate, and shall hold their offices for the term of four years from their appointment, and until their successors are appointed and qualify. The term of each manager shall be designated in her certificate of appointment. Upon the expiration of the term of service of any member of the Board of Managers, one manager shall be appointed in the same manner, whose term of office shall continue four years from and after the expiration of the term of her predecessor, and until her successor is appointed and qualified. All vacancies in said Board shall be filled by appointment by the Governor subject to approval by the Senate at its next succeeding session. The person appointed to fill a vacancy shall be entitled to hold her office for the unexpired portion of the term of the person whom she may be appointed to succeed. Said managers, before entering upon the discharge of their duties, shall take an oath or affirmation faithfully to perform the duties of their office; which oath or affirmation shall be filed and preserved in the office of the Secretary of State: Provided, however, That the Governor, Auditor and Secretary of State shall constitute a Board of Audit, whose duty it shall be to examine, audit and approve of the accounts and acts of said Board of Managers appointed under the provisions of this act.

(1869 S., p. 61. In force May 13, 1869.)

8257. (6164.) *President.* 3. The said Board of Managers shall appoint one of their number as President of the Board.

8261. (6168.) *Female Superintendent and Officers—Rules.* 7. Said Board of Managers may, with the approval of the Governor, appoint a suitable Superintendent of said institution, and all necessary subordinates (not exceeding a number to be fixed by the Governor), and fix their respective salaries, and shall have power, with the like approval, to make and enforce all such rules, regulations, ordinances and by-laws for the government and discipline of said institution, and for the admission of girls into the Reformatory Department thereof, as they may deem just and proper. The Superintendent and all the subordinate officers of said institution shall be females: Provided, however, That if a married woman shall be appointed Superintendent or to any subordinate position, the husband of such appointee may, with the consent of the Board, reside in the institution, and may be assigned such duties or employment as the Board of Managers may prescribe.

8262. (6169.) *Bond of Superintendent.* 8. Before entering upon the discharge of her duties, the Superintendent shall give bond to the State of Indiana, in the sum of ten thousand dollars or over, with security to be approved by said Board of Managers, conditioned for the faithful performance of her duties as such Superintendent, and that she will faithfully account for all moneys, property and effects intrusted to her as such, and shall take an oath or affirmation to discharge the duties of her said office with fidelity; and if said Superintendent shall be a married woman, such bond shall be executed by her husband and her sureties, but need not be signed by herself.

8263. (6170.) *Duties of Superintendent.* 8. The Superintendent shall reside at the institution, and shall have the charge and custody of the buildings and other property thereof, and of the inmates who may be committed to both departments of the institution, and shall govern them in accordance with such rules and regulations as the Board of Managers may prescribe, and shall employ such methods of discipline as will as far as possible, reform the characters, preserve the health, promote regular improvement in the studies and industrial employments of the inmates of the institution, and secure them fixed habits of industry, morality and religion. The rules, regulation and discipline of each department of the institution shall be adapted to the character of the inmates thereof.

8264. (6171.) *Interest in Contracts.* 9. No manager, officer or employe of said institution shall be personally interested, directly or indirectly, in any contract, purchase or sale made by or to or on behalf of said institution, or in any business carried on for or on behalf of said institution. All contracts, purchases or sales made in violation of this section shall be deemed and held null and void; and all money paid to such managers, officers, or employes, or to any person for their benefit, in whole or in part consideration of such purchase, contract or sale, may be recovered back by civil action, in the name of the State of Indiana, against such manager, officer or employe, or against any person acting in her or his behalf, and it is hereby made the duty of the Governor and Board of Managers, upon satisfactory proof of such interest, to immediately remove such manager, officer or employe so offending, and to report the facts to the attorney-general, who shall take such legal steps in the premises as he may deem expedient.

8265. (6172.) *Annual Report*. 10. Said Board of Managers shall on or before the first day of January in each year, after the institution is open for the reception of inmates, make to the Governor a full and detailed report of their doings as such managers, and of the receipts and expenditures of such institution, with such other information relating to the condition of the institution and its inmates, and the results attained, as may be interesting or useful to the public; which report shall be communicated by the Governor to the General Assembly at the next succeeding session thereof.

8273. (6180.) *Vicious Girls Received for Reformation*. 11. Whenever said institution shall have been proclaimed to be open for the reception of girls in the reformatory department thereof, it shall be lawful for said Board of Managers to receive into their care and management in the said reformatory department, girls under the age of fifteen years, who may be committed to their custody, in either of the following modes:

First. When committed by any judge of the Circuit Court, either in term time or in vacation, on complaint and due proof by the parent or guardian that by reason of her incorrigible or vicious conduct, she has rendered her control beyond the power of such parent or guardian and made it manifestly requisite that from a regard to the future welfare of such infant, and for the protection of society, she shall be placed under such guardianship.

Second. When such infant shall be committed by such judge as aforesaid, upon complaint of any citizen, and due proof of such complaint, that such infant is a proper subject for the guardianship of such institution, in consequence of her vagrancy or incorrigible or vicious conduct, and that from moral depravity or otherwise of her parent or guardian in whose custody she may be, such parent or guardian is incapable or unwilling to exercise the proper care or discipline over such incorrigible or vicious infant.

Third. When such infant shall be committed by such judge as aforesaid, on complaint and due proof thereof, by the township trustee of the township where such infant resides, that such infant is destitute of a suitable home and adequate means of obtaining an honest living, or that she is in danger of being brought up to lead an idle or immoral life.

8275. (E. S. 1998.) *Commitments*. That commitments under existing law or laws which may be hereafter passed to the Reformatory Department of the institution, mentioned in section 1 of

this act, may be made to read, for girls not under eight nor over fifteen years of age.

8276. (E. S. 1999.) *Detention and Release.* That all girls who may be now or hereafter committed to said Reform School by virtue of any existing law or laws, which may be hereafter passed, shall be detained in or committed to said Reform School until they respectively attain the age of twenty-one years: Provided, That the Board of Managers may release on parole all such girls at the age of eighteen years under such regulations as they may provide, which release shall remain in force during the good behavior of such girl or girls.

(1875, p. 73. In force August 24, 1875.)

8277. (6182.) *Discretion to Send to Jail or Reformatory.* If any girl under the age of sixteen years shall, under existing laws, or under those which may hereafter be enacted, be tried by any court of competent jurisdiction for any criminal offense for which she might, on conviction, be sentenced, for any period of time, to imprisonment in the proper county jail, it shall be competent for the court or jury by which the case may be tried, at their discretion, on conviction, to substitute confinement in the Reformatory Department of the institution created by this act for imprisonment in the county jail; and such confinement shall be until the infant attains the age of eighteen years, unless sooner lawfully discharged by the Board of Managers or otherwise.

Females over fifteen years of age may be sent to the county jail when the law so provides.—*Ruble v. State*, 52 Ind. 358.

(1869 S., p. 61. In force May 13, 1869.)

8278. (6183.) *May be Sent on Report of Grand Jury.* If any girl under the age of fifteen years shall be accused before the grand jury of any crime or misdemeanor, and the charge is supported by evidence sufficient to put the accused upon trial, the grand jurors, in their discretion, instead of finding an indictment against the accused, may make a return to the court that it appears to them that the accused is a suitable person to be committed to the guardianship of the Reformatory Department of the institution, created by this act; and the court may, thereupon, order such commitment until the infant shall attain the age of eighteen years, unless sooner discharged as aforesaid, if satisfied from evi-

dence adduced that such commitment ought to be made: Provided, however, That the production of evidence may be weighed by the parent or guardian.

8279. (6184.) *May Send to Reformatory on Arrest of Trial.* If any girl under the age of fifteen years shall be arraigned for trial before any court of competent jurisdiction, charged with the violation of any criminal law of this State, the judge of such court may, with the consent of the counsel, arrest at any stage of the cause, any further proceedings on the part of the prosecution, and commit the accused to the Reformatory Department of said institution until she shall attain the age of eighteen years, unless sooner lawfully discharged by the Board of Managers or otherwise.

8280. (6185.) *May Send on Habeas Corpus.* When any girl under the age of fifteen years shall be imprisoned to await her trial on any charge punishable with imprisonment, such girl may be brought before the proper circuit judge, in term time or vacation, on a writ of habeas corpus, and shall be entitled to a private examination and trial before such judge with a view to the question whether such infant ought to be committed to said institution. Only the parties to the case and the parent or guardian of the accused shall be admitted to such examination, unless one of the parents, the guardian or the legal representatives of the accused shall demand a public trial; in which case all proceedings shall be in the usual manner. And upon such hearing it shall be competent for such judge to make an order committing the accused to the Reformatory Department of said institution, until she attains the age of eighteen years, unless sooner lawfully discharged by the Board of Managers or otherwise.

8281. (6186.) *Order of Commitment.* Whenever any infant under the age of fifteen years shall be committed to the Reformatory Department of said institution under the provisions of this act, the order of commitment shall be signed by the judge by whom it is made and authenticated by the clerk of the proper court, under the seal of the court. Such order shall state the name and age of the infant and the section of the act under which she may be committed, without setting forth or mentioning the offense with which she may be charged; and no other or further record of the proceedings shall be made, unless demanded by the infant or her parent or guardian. If, however, there shall be a regular trial

and conviction, under section 21 of this act (p. 6182), the usual record shall be made and a certified copy of the judgment shall constitute the order of commitment.

8282. (6187.) *Specifications in Commitment.* When a commitment shall be made under either of the specifications of section 19 of this act (p. 6180), the order of commitment shall also specify under which of the clauses or specifications of said section such order is made.

8283. (6188.) *Regulations for Discharge.* The Board of Managers of said institution may provide by general regulations for the discharge of girls committed to the Reformatory Department of said institution under any section or provision of this act, and such discharge shall be made by the Superintendent, with the approval of the Board.

8284. (6189.) *Escape.* Any person who may be committed to or confined in either department of said institution, and who may escape therefrom, may be arrested and returned to said institution by any officer or citizen, on the written order or request of the Superintendent or Board of Managers.

8285. (6190.) *Employment and Instruction—Apprenticeship.* The Superintendent of said institution shall have power to place any girl committed to the Reformatory Department thereof at any employment, for account of the institution or otherwise, and cause her to be instructed in such branches of useful knowledge as such Superintendent may think proper; and shall also have the power to bind out such infant with her consent during her minority, and may execute indentures of apprenticeship for such infant which shall have the like force and effect as other indentures of apprenticeship made under the laws of this State. Every indenture of apprenticeship so made before the delivery thereof, shall be approved by the Board of Managers of such institution; which approval shall be endorsed on the indenture, and signed by the president of the board. In case any girl so apprenticed shall prove untrustworthy or unreformed, the Superintendent may permit her to be returned to the institution to be held in the same manner as before such apprenticeship, whereupon the indenture may be cancelled by order of the board. If such infant shall have an unsuitable master or mistress, the Superintendent may, with the approval of the board, take her back into the said institution with or without the consent of such master or mistress; and thereupon the indenture shall be cancelled. All indentures so made shall be filed

and kept in said institution, and it shall not be necessary to file or record them in any other office or place, but the master or mistress of any girl so apprenticed shall, on request, be entitled to a copy of her indenture.

8286. (6191.) *Payment of Expenses.* If any girl shall be committed to the Reformatory Department of said institution upon the complaint or at the instance of her parent or her guardian, the cost of transporting such girl to the institution and the cost of her subsistence and clothing, shall be paid by such parent or guardian, unless such parent is unable by reason of his or her poverty to pay the same, or unless such guardian has no funds, effects or estate of such infant out of which the same could be paid. The order of commitment shall in every such case state whether the parent is able to pay the cost of the subsistence and clothing of the infant, or whether the guardian has any estate or effects of the infant, out of which such costs can be paid. The Board of Managers shall in every case estimate and fix the amount to be paid and the same shall be paid to the Superintendent quarterly in advance.

8287. (6192.) *Estimates—County to Pay Half.* Said Board of Managers shall, with the approval of the Governor, estimate and determine as near as may be, the actual expense per annum of clothing and subsisting an infant committed to the Reformatory Department of said institution, and include a statement of such estimated price in each annual report. One-half of the cost of the keeping, according to such estimates, together with the entire cost of conveying such infant to the institution, shall be paid by the county from which such infant may be committed, except in cases where the cost of transporting such infant to the institution and her subsistence is chargeable to her parents or guardian under the last preceding section.

8288. (6193.) *Payment by County.* The expense which any county may be liable to pay for the clothing and subsistence of any girl committed to the Reformatory Department of said institution, under the provisions of this act, shall be paid by the Board of County Commissioners of such county into the state treasury on a certified statement in detail of the amount due therefor from such county being transmitted by the Superintendent of the institution through the treasurer of the state to the auditor of the proper county.

8290. (6195.) *Parent's Proceedings—Discharge.* If a parent, guardian, or master of any infant committed to the Reforma-

tory Department of said institution, or any person occupying the position of parent or guardian in fact, or any relation by blood or marriage, not more remote than first cousin to such infant, shall feel aggrieved by the commitment of such infant to such institution, he may make written application to the Board of Managers of said institution for the discharge of such infant, which application shall be filed with the Superintendent, who shall inform the managers thereof; and the same shall be heard and determined by said managers at such time as they shall appoint for that purpose, not later than the next regular meeting of the board. Such application shall state the grounds of the applicant's claim to the custody of the infant and the reasons for claiming such custody.

Within ten days after the hearing of such application the Board of Managers shall make and announce their decision thereon; and if they shall be of the opinion that the welfare of such infant would be promoted by granting the application, they shall make an order to that effect; otherwise, they shall deny the application. The applicant, upon the denial of the application (by first giving security for the payment of all costs, the security to be approved by the clerk of the proper court), may commence an action in the Circuit Court of the county in which the institution may be situated, for the recovery of the custody of such infant against the managers of the institution. The complaint in said action shall state the facts and manner of the commitment, the making of the plaintiff's application to the managers for the custody of such infant, and the denial of such application by said managers, as well as the ground upon which the plaintiff relies for the recovery of the custody of such infant. Said action shall be prosecuted in like manner as other civil actions; and the cost thereof shall be paid by the plaintiff without reference to the result of the action, unless the court shall state in the judgment that refusal of managers to grant the application of the plaintiff was plainly unreasonable, or that the original commitment was manifestly unnecessary and improper.

8291. (6196.) *Governor May Commute.* Whenever any female under the age of fifteen years shall be sentenced by any court of competent jurisdiction to imprisonment in any county jail, it shall be lawful for the Governor, on the application of such infant, parent, guardian or any other person, to commute her punishment by substituting therefor the commitment of such infant to the Reformatory Department of the institution created by this act dur-

ing the minority of such infant unless sooner lawfully discharged by the Board of Managers, or otherwise.

8293. (6198.) *Instruction.* It shall be the duty of said Board of Managers to provide teachers and, as far as practicable, instruct the inmates of said institution in reading, writing and arithmetic.

(1873, p. 139. In force February 3, 1873.)

8294. (6199.) *Furnishing.* Whenever said institution, or any portion or department thereof, is ready to be furnished, the Board of Managers thereof shall present to the auditor of state an itemized estimate of the articles needed for that purpose, with the estimated cost of each item or article, which estimate or statement shall be verified by the oath of the president of said board. Upon the presentation of said estimate or statement to the auditor of state, said auditor shall, as soon as practicable, notify the Governor, secretary and treasurer of state of the filing of such statement, and if a majority of said officers shall be of the opinion that the proposed expenditure or some part thereof is necessary for the proper furnishing of said institution, or any part or department thereof, they shall direct in writing the auditor of state to draw his warrant for the amount so estimated or such part or portion thereof as they may approve, on the treasurer of state, who shall pay the same to the president of said board, or to her order out of any money in the treasury not otherwise appropriated.

8295. (6200.) *Current Expenses.* The current expenses of said institution shall be estimated for, allowed and drawn from the treasurer as follows: At the commencement of each month the Superintendent shall prepare and verify by her oath an estimated itemized statement in writing of the amounts that will be required to meet the current expenses of such institution during such month and present the same to the auditor of state, who shall notify the governor, secretary and treasurer of state thereof; and if a majority of said officers shall approve and allow said estimate or a part thereof, they shall direct in writing the auditor of state to draw his warrant on the treasurer of state for the amount which may be so allowed by said state officers or by a majority of them; and said treasurer shall pay such warrant out of any moneys in the treasury not otherwise appropriated. Every such estimated itemized statement shall set forth the number of the inmates in each of the departments of the institution, and also the number of the officers and persons employed therein.

8296. (6201.) *Semiannual Report.* The Board of Managers and Superintendent of said institution shall, at the end of every period of six months (commencing with the first money which may be drawn from the treasury on any estimate made under either of the previous sections of this act), make an itemized report of the expenditure of the money which may have been so drawn from the treasurer under this act; and the auditor shall carefully examine such report and if in his opinion any money shall have been improperly expended in the purchase of unnecessary articles or by paying too much therefor or otherwise, said auditor shall immediately notify the governor, secretary and treasurer of state, who in conjunction with such auditor shall immediately proceed to investigate the matter and in accordance with the decision of a majority of these officers the amount shall be audited: Provided, however, That before rendering an adverse decision upon any such amount or any part thereof, they shall notify the disbursing officer and allow her to present such explanations or adduce such testimony as she may desire in regard to the matter, and they shall have the same power to summon and require the attendance of witnesses as are given to the circuit courts of this state.

(Acts 1903.)

Commitments. Section 1. Be it enacted by the General Assembly of the State of Indiana, That section 19 of the above entitled act be amended to read as follows: Section 19. Whenever said institution shall have been proclaimed to be open for the reception of girls in the Reformatory Department thereof, it shall be lawful for said Board of Managers to receive into their care and management in the said Reformatory Department, girls under the age of fifteen years who may be committed to their custody in either of the following modes, to wit:

First. When committed by any judge of the circuit court, either in term, time or in vacation, on complaint and due proof by the parent or guardian that by reason of her incorrigible or vicious conduct she has rendered her control beyond the power of such parent or guardian and made it manifestly requisite that from regard to the future welfare of such infant, and for the protection of society, she should be placed under such guardianship.

Second. When such infant shall be committed by such judge as aforesaid upon complaint by any citizen and due proof of such complaint that such infant is a proper subject for the guardianship of such institution in consequence of her vagrancy or incorrigible

or vicious conduct, and that from moral depravity or otherwise of her parent or guardian in whose custody she may be, such parent or guardian is incapable or unwilling to exercise the proper care or discipline over such incorrigible or vicious infant.

Sec. 2. All laws or parts of laws in conflict with this act are hereby repealed.

Sec. 3. Whereas, an emergency exists for the immediate taking effect of this act, the same shall be in force from and after its passage.

(Acts 1907, s. 525, p. 342.)

Juvenile Court—Proceedings. Section 1. Whenever a complaint is made or pending against a boy before he has completed his sixteenth year, or a girl before she has completed her seventeenth year, for the commission of any offense not punishable by law with imprisonment for life, or for which the penalty is death before any court or magistrate, it shall be the duty of such court or magistrate at once and before any other proceedings are had in the cause to give notice in writing of the pendency of said cause to the probation officer of his county and forthwith to transmit all papers in said cause to the juvenile court with his certificate that jurisdiction in said cause is in said juvenile court. * * *

If any child is found guilty of the offense charged against it, or appears to be wilfully wayward and unmanageable, the court may commit him or her to the Indiana Boys' School, the Industrial School for Girls, or to any other state, penal or reformatory institution authorized by law to receive such boy or girl, subject to such conditions as are already provided by law for the reception of such children in said schools and institutions. And in all cases when a child shall be committed to a state or other institution as above provided, the report of the probation officer shall be attached to the commitment and the child shall be placed in charge of the probation officer, or some person designated by the court, to be conveyed under his direction to the designated institution:

Provided, That a woman shall always be sent with the girls so committed, and the person taking such child to the designated institution shall be allowed and paid for his or her actual expenses and no more, where he or she is an officer of such juvenile court appointed by the court, and in all other cases the person taking such child to any institution shall be allowed and paid for his or her services the same fees and expenses as are paid to the sheriffs in like cases.

(Acts 1903, s. 1, p. 524.)

Separation of Industrial School for Girls and Woman's Prison. The Indiana Industrial School for Girls shall be separated from the Woman's Prison and there shall be constructed for the use of the Indiana Industrial School for Girls, buildings separate and widely apart from those now used by the Industrial School for Girls and Woman's Prison.

(Acts 1903, s. 13, p. 526.)

There is hereby appropriated from the state treasury, out of any funds not otherwise appropriated, one hundred and fifty thousand dollars (\$150,000), or so much thereof as may be necessary for the purchase of the ground, erection and equipment of the buildings and expenses of the commissioners authorized by this act, one hundred thousand dollars of which shall be available on and after June 1, 1903, and the remaining \$50,000 shall be available after November 1, 1903. The work shall be completed and turned over to the Board of Managers of the Industrial School for Girls, hereinafter provided for, on or before October 31, 1904. When this shall have been done by said commissioners and final settlement made with the auditor of state, then the duties of said commissioners shall end.

(Amendment to above section.)

Separation and Appropriation. There is hereby appropriated from the state treasury out of any funds not otherwise appropriated, two hundred thirty-five thousand dollars (\$235,000), or so much thereof as may be necessary for the erection and equipment of the buildings and expense of the commissioners authorized by this act; seventy-five thousand (\$75,000) of which shall be available on and after June 1, 1905, and the remaining one hundred sixty thousand dollars (\$160,000) shall be available on and after November 1, 1905. The said buildings shall be erected and equipped and made ready for occupancy as soon as practicable, and when completed, turned over to the Board of Managers of the Industrial School for Girls provided for in this act.

(Acts 1907, s. 1, p. 138.)

Board of Trustees. The Board of Trustees of the Indiana Industrial School for Girls shall hereafter consist of four members. Upon the expiration of the term of any member of said board, or upon a vacancy occurring, the Governor shall appoint a successor

to such member, except as herein otherwise provided. All appointments shall be for a term of four years, respectively, excepting in case of vacancy by death, removal or resignation, they shall be for the unexpired term. In making all appointments referred to in this section, the Governor, in addition to the qualifications hereinafter mentioned, shall take into consideration the political affiliation and belief of such appointees, so that not more than two of the members of said boards respectively shall be members of the same political party or have the same political affiliation or belief.

Sec. 2. *Name of Institution Changed.* The name of the Indiana Industrial School for Girls is hereby changed to the Indiana Girls School.

[Acts 1907, s. 4, p. 140.]

Trustees — Qualifications — Bond — Removal. The Board of Trustees of the Indiana Girls School shall consist of women only.
* * * No other qualifications, except fitness and those hereinbefore specified, shall be considered in the making of such appointments. Each member of any such board of trustees hereafter appointed shall qualify by giving a bond with surety in the sum of ten thousand dollars (\$10,000) to the approval of the Governor. At the meeting of said boards following the appointments provided for in section one (1) of this act, they shall proceed to elect a president, vice-president, treasurer and secretary, and thereafter annually, the organization shall be at the April meeting of said board. Such treasurer shall qualify by executing a bond in the sum of fifty thousand dollars (\$50,000), with surety to the approval of the Governor. The Governor may remove any of such trustees for misconduct or neglect of duty after an opportunity to be heard upon written charges. The Board of Trustees of any institution shall have the right to condemn property for the convenience or the necessary purposes of such institution. Condemnation proceedings shall be conducted pursuant to the statutes relating to the exercise of the power of eminent domain.

Compensation—Interest in Contracts. Such trustees shall receive as compensation \$300 a year each, and their reasonable expenses, not to exceed \$125 a year each, which shall be paid quarterly as other expenses of the institution are paid. No person shall be eligible to be appointed a member of any of the boards of trustees referred to in this act, who is a contractor with the institution of whose board he or she is a member, or who is interested

either directly or indirectly in any contract with or in furnishing any of the supplies for such institution, and if any person appointed under the provisions of this act shall become so interested during his or her term of office, such interest shall vacate his or her office and his or her successor shall be immediately appointed as hereinbefore provided to fill his or her unexpired term.

Employees. All officers and employes of each institution shall be selected and appointed by the Superintendent or head of the institution and shall be removable at his or her pleasure, and all such officers and employes shall be appointed regardless of political or religious affiliation on the basis of fitness after examination as to their qualifications for the duties to be performed under such rules and regulations as may be prescribed by the board. The annual compensation of Superintendent or head of an institution and the number of officers and employes, their duties and compensations, shall be fixed by the Board of Trustees at its discretion and said trustees are hereby forbidden to solicit or request or in any way interfere with the appointment or discharge of any officer or employe.

Supplies—Purchase—Bids. In the purchase of all supplies that enter into the maintenance of any of the institutions covered by this act, it shall be the duty to invite competitive bids through sealed proposals to the president of the board of each institution and the lowest and best responsible bidder shall be awarded the contract and the same provision shall apply to the construction and equipment of all buildings for any such institution. Public notice of such bids shall be given by publication in the two leading newspapers in the county where such institution is located, and otherwise if considered beneficial. If such board deems it advisable and in the interest of economy to buy certain articles in quantity to last for a longer period, it shall have the right to do so. Such fact, however, shall be particularly stated in the notices. Blank bids shall be furnished for all applicants, but bids shall not be rejected because not contained on such form. Any or all bids may be rejected.

Annual Reports. Annual reports, uniform in character, shall be made by such boards to the Governor, and shall be printed.

Such institutions shall be conducted upon a thorough, non-partisan basis.

(Acts 1907, p. 669.)

Appropriation. Maintenance, thirty-eight thousand dollars, and one hundred fifty dollars per capita per annum for each person actually present over a daily average number of two hundred and fifty-three girls each month, which sum is hereby appropriated out of any money in the treasury not otherwise appropriated; said excess amount to be approved by the board of state charities. Discharge, clothing and parole, seven hundred dollars; library, three hundred dollars. Specific. One new cottage, twenty-five thousand dollars; two employes' cottages for men, at two thousand dollars each, four thousand dollars; cow barn and horse barn, three thousand dollars; store house and cold storage, six thousand five hundred dollars; fence, two thousand dollars; hennery and piggery, five hundred dollars; grading walks, drives, roads, improving grounds and planting trees, five thousand dollars; furnishing and installing boiler, engine and generator, switchboard and all necessary appliances, equipments, materials and labor, five thousand seven hundred and fifty dollars; one standpipe, two thousand dollars; live stock, vehicles, harness, implements and necessary utensils, three thousand dollars, the same to be available immediately. Thirty thousand dollars to be expended in furnishing and equipment of buildings now or hereafter to be constructed, to be available upon the taking effect of this act: Provided, That out of such sum of thirty thousand dollars, six thousand dollars, or so much thereof as may be necessary, shall be used for paying for pumps, air lift and equipment, architects' fees, cistern, salary of superintendent of construction and such unpaid expenses of the commissioners as are authorized by law.

(Acts 1908, s. 552, p. 9.) (Special Session.)

Appropriations. Regular and Specific. Regular: Maintenance for the fiscal year ending September 30, 1908, eight thousand dollars. Specific: For heating and water line from new cottage to the power house, seven thousand dollars; for plumbing, sewerage, electric lighting, cistern and equipment for new cottage, four thousand dollars; for furnishings for new cottage, three thousand dollars, for completion and equipment of storehouse and cold storage plant, two thousand dollars; for the repair and the completion of the sewerage system, five thousand dollars. All of said appropriations are hereby made immediately available and all of said specific appropriation shall continue to be available until September 30, 1909.

(Acts 1908, s. 557, p. 12.)

Appropriations—Balances Available. Section 1. Be it enacted by the General Assembly of the State of Indiana, That the unexpended balances remaining in the state treasury of the specific appropriations made by the regular session of the General Assembly of 1907 for the following specific purposes, viz: * * * Indiana Girls' School: one new cottage, pumps, air lift and equipment, cow barn and horse barn, store house and cold storage; be and the same are hereby continued available for the purposes for which said appropriations were made until September 30, 1910.

Emergency. Sec. 2. As there is an emergency for this act the same shall be in force from and after its passage and approval.
